### Banks fear lawsuits and loss of guarantees if Brussels rules practice illegal EU state-backed loans challenged

The widespread practice by European Union governments of giving special assistance to alling companies by guaranteeing their bank loans could soon be declared illegal under plans being considered by the European Commission.

There is a lot of monay aloshing around out there, ebout which the Commission knows very littla," said one diplomat.

"Governments have become nore and more devious about how they administer state aid.

Government guarantees, which allow companies to borrow at cheaper rates than competitors, are being targeted in the Commission's latest efforts to stamp out illegal state aid in the single market.
The initiative is at an early

stage, but is already making bankers nervous. They are worried about the implications if thousands of state guarantees on loans they have made to their customers are declared illegal. This could mean thet the banks lose the safeguard of

government backing. "This is contravenes the EU's rules. He the kind of thing bankers stay also faced pressure from interewake at night worrying about," said an industrialist.

Under EU competition rules government guarantees on loans qualify as state aid and should be reported to the authorities in Brussels. But for years governments have not done so, which technically means that all such existing guarantees are illegal.

Mr Karel Van Miert, the competition commissioner, launched the latest initiative because ha felt he could no national banks to clarify the situation.

We have to know what the practical implications are for the banks," commented one banking official. "Banks benefit from the state guarantees but obviously we would prefer. legal security."

The use of guarantees has become increasingly wideread as governments - worried about the negative publicity generated by old-fashioned cash handouts - have become adept at disguising state aid.

ures, aid in the form of governmant loan guarantees is thought by some industry experts to amount to more than other forms of state aid.

such as capital injections. One idea under consideretion by the Commission is to declare an amnesty on existing losn guarantees - to evoid destabilising tha banking sector. At the same time it would insist that all future arrange-

### Paris aims to raise \$5bn in telecoms sale

By David Owen in Paris

The French finance ministry is aiming to raise FFr25bn (\$5bn) from April'a sale of shares in France Telecom, the state-controlled telecommunications operator, in what is expected to be the country's largest privetisation.

This emerged as the government announced that two French banks - Banque Natonale de Paris and Banque Paribas - bad been chosen to act as global co-ordinators of the float.

The deal should provide the vast bulk of the French government's expected privatisation receipts for 1997 of

The FFr25bn target suggests ministers are expecting a valuation for the whole group, one of the world's biggest telecoms operators, of more than FF7130bp. Mr François Fillon, telecom-

munications minister, said recently that the proportion of capital offered in the first of probably two tranches should be "about 20 per cent".

The government has promised to retain a 51 per cent holding in the group, which is dua to be incorporated on January 1 1997, with a maximum of a further 10 per cent reserved for employees.

The FFr130bn figure assumes one-fifth of the group's shares are floated and thet about 5 per cent of the money raised is consumed by edvertising costs and advisers' fees. Current bank valuations of the company are pitched at FFr100bn-FFr200bn. The wide range is partly because details have yet to be agreed of inter-

connection charges for new operators when the French telecoms market is opened to competition in 1998.

A research paper published in June by BZW, the invest-ment arm of Barclays Bank, pltched its central valuation at FFr147bn, This was based on projected group earnings growth of 10.7 per cent a year over the next five years.

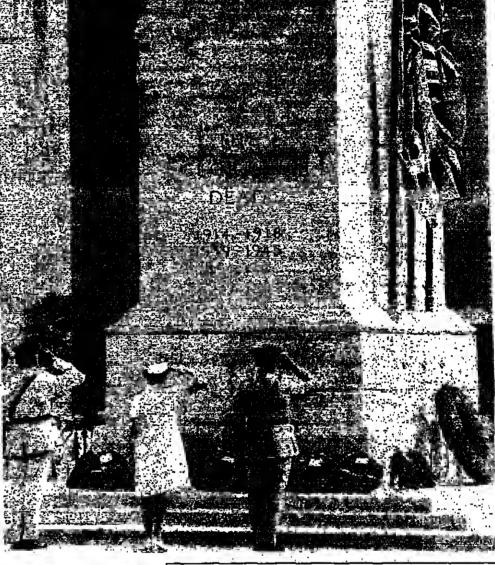

Since then, the government has unveiled plans to open up the country's long-distance telephone market in a way that experts think will give France more effective competition in telecoms than most other large countries.

Mr Michel Bon, France Télé-com chairman, has indicated that be expected the group's 1996 eccounts to include net provisions of FFr15bn-FFr30bn. taking its net worth below FFr100bn. The choice of two French

banks to act as global co-ordinators was interpreted by some observers as a sign of the importance the government and France Télécom attach to ensuring that domestic French demand for the offering is strong.

The approach differs from that adopted for Deutsche Telekom, the soon-to-be-floated German operator, in that case, e foreign bank - Goldman Sachs of the US - was chosen as one of the global co-ordinators.

Two foreign banks - Merrill Lynch of the US and Deutsche Morgan Grenfell - are expected to be given lead syndicate positions for the France Télè-

### Bonn still committed to Eurofighter, says Waigel

By Andrew Fisher in Frankfurt

Mr Theo Waigel, Germany's finance minister, sought yes-terday to remove doubts about the Bonn government's commitment to the Eurofighter project at a time of increasing budget austerity caused by the struggle to qualify for European monetary union.

"The Eurofighter is necessary to replace the Phantom fighter aircraft, which are up to 40 years old," Mr Waigel said in an interview with Bild am Soontag, the Sunday newspaper. The defence ministry would have to meet the unavoidable expenses" of the involvement in Bosnia as well as equipment purchases.

However, his comments caused confusion among German defence officials wbo pointed out that no money had vet been set aside in the 1997

### Italy's middle classes take to streets

Berlusconi orchestrates protests against tax plans and wins TV slot, reports Robert Graham

rightwing political leader aod hillionaire, has taught Italy's middle classes bow to take to the streets in protest.

Over the weekend Mr Berlusconi and his metlculous managers orcbestrated the appearence of extraordinary anomalies of his more than half a million people in position. He is standing trial for Rome to demonstrate against the centre-left government's plans to raise taxes. The turnout was higger than the most optimistic calculations of the Berlusconi camp, which was concerned that the "silent majority" supporters lacked the stomach for a long walk and the enthusiasm for protest.

As a result the opposition has strengtheued its hand in crucial debates on the 1997 budget this week. The Prodi government bopes to push the budget provisions through the chamber of deputies by the end of the week. But to do this without inflaming the atmosphere, the government may now have to make some concessions to the opposition.

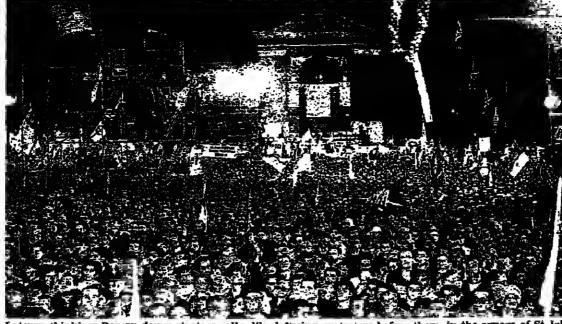

It was the first time since entering politics in January 1994 that Mr Berlusconi had marched through the streets behind the banners of a protesting crowd. Indeed, be had eschewed big public events and preferred to communicate his political messages via television, not least bis own three channels. He appears to have changed his mind because of the increasing inability provided the noise. Tha two-hour

the organisational skills of a former general, a hudget reported to be of L1.4bn (\$920,000), and a warm Saturday afternoon, But it was also because an important segment of society wanted to show that the hig mass demonstration was no longer the exclusive preserve of the left and the trades unions as it had been throughout post-war Italy.

his point was brought home hy Mr Berlusconi, wearing a double-breastad business suit for the occasion; and by the image of a woman demonstrator taking off high beels to put on sensible walking shoes before beginning her march. Demonstrators, most of whom walked in silence deliberately avoiding slogans, willingly conceded they were middle class - professionals, businessmen. sbop-keepers. The proletarian side came from the ranks of the rightwing National Alliance, which also

the Lateran on Saturday

huge square of St John the Lateran, the traditional venue for every big leftwing rally - rubbing bome the point that the left no longer monopolised protest.

After some rough bargaining, Mr Bsrlusconi secured live coverage of the event on the state-run Rai TV.

march ended with a rally in the The government could scarcely with Rai's third channel which he refuse, since exhaustive coverage had been extended two years ago to the million-strong demonstration against the Berlusconi government's pension reform plans - a protest which accelerated his exit from the premiership. However, Mr Berlusconi had to content himself

calls Telekabul because of long-standing control by the left. Afterwards he complained of being hard done by, not least because of time devoted to a 120,000-strong rival demonstration staged in Naples by former communists to call for more jobs.

### Moscow 'must lift trade curbs to join WTO'

By John Thornhilli

Russla must take further steps to liberalise its foreign trade regime if it wants to propel economic reform forward and realise its amhition of joining the World Trade Organisation, according to Mr Hans van den Brock, the EU's commissioner for external policy.

Following talks with senior Russian officials in Moscow last week, Mr van den Broek said the EU had agreed to step up technical assistance to Russia to help remove remaining trade barriers and encourage muchneeded foreign investment.

EU officials will meet Mr Oleg Davydov, Russia's trade minister, later this month to address mutual conceros such industries as alcohol. steel and textiles.

Since the break-up of the Soviet Union, the EU has emerged as Russia's biggest trading partner but the relationship has been marred by mutual recriminations over unfair trading practices.

We would like to identify and analyse all the obstacles to foreign trade in the form of tariff and non-tariff policies," Mr van den Broek

ment for its "remarkable" progress in reforming the economy over the past four years, reducing inflation to less than 1 per cent a month and substantially cutting its

hudget desicit. But he suggested it would take longer than most observers originally expected for central and eastern European countries to build fully-functioning market economies compatible with EU membership.

They have to be prepared not only for co-operation but integration into a fullyfledged markst economy with a single market and a level playing field as well as meeting the same democratic standards and respect for law as is our hahlt," he

Mr van den Broek said the EU's Tacis technical assistance programme was designed to help Russia address many of the "bread and butter" concerns, such as tax reform, industrial restructuring, and encouraging small enterprises, needed to make the economy work more effectively.

Russian officials will today begin a series of presentations in western financial centres to prepare the aid. way for the country's first

# Ministers to seek pact on Emu budget deficit rules

EU finance ministers will today try to break the deadlock over German demands for firm rules on when countries taking part in the future single currency zone will be allowed to run excessive budget deficits.

A majority of countries, led by Britain and Spain, consider the German approach too rigid. The impasse means EU leaders may be unable to meet their earlier pledge to agree on the nuts and bolts of economic and monetary union at a summit in Dublin next

A delay in agreement on the so-called Stability Pact would not necessarily scupper the Emu timetable, but it could damage

In recent weeks, bond and currency traders have become increasingly upbeat ebont the prospects for a broad-based European monetary union including weaker economies such as Spain and, perhaps, Italy.

The markets' favourable senti-

ment toward Emu contrasts with the mood among monetary officials, who are predicting a bruis-ing phase of negotiations on the Stability Pact and on the delicate issue of the Italian lira's planned re-antry into the European exchange rate mechanism.

The centre-left Italian government would like to speed approval of the 1997 budget to allow ERM negotiations to start

confidence in the financial mar-kets. later this month, but officials in insurance policy against an Santer and Mr Yves-Thibault de Brussels caution that the re-entry overly flexibla reading of the Silguy, EU monetary affairs comlevel will prove contentious.

Italian ministers have talked off-the-cuff ebout a level of L1,000 and L1,050 against the D-Mark for the lira's re-entry, and the Bank of Italy has been intervening in the markets to ensure the lira bovers around LI.000. But France, in particular, is determined to prevent Italy stealing a competitive advantage with an

undervalued currency. Stability Pact have become a test of strength for Mr Theo Waigel, Germany's finance minister. He called last year for firm rules on fiscal discipline as a guarantee against fiscal delinquency among Emu participants and as an forward by President Jacques

Maastricht targets for Emu. especially on public deficits.

The key German demand is to define precisely the level of economic weakness under which countries are allowed to run excessive budget deficits. Garmany wants a decline of 2 per in GDP over four consecutive quar-

missioner, both of whom warned about the likely negative reaction from the Bundesbank, according to two officials present.

On several occasions, German officials have threatened to abandon negotiations on the Stability Pact with the 14 other EU countries and wait instead until the first wave of Emu members is chosen in early 1998 and seek a separate stability treaty among

the chosen few, including France. Though the German threat is seen in Brussels as a negotiating tactic, it has alarmed some countries who view it as a ruse to build an exclusive political club around France and Germany. Editorial Comment Page 17

# paying taxes in euros

By Gillian Tett.

European companies may be prevented from paying taxes and filing accounts in the single currency in 1999 unless governments speed preparations for European mooetary union.

Several European governments - including France and Germany - have privately indicated to business groups that they may be unable to accepting corporate payments in the single

currency, the euro, in 1999. The problem could hamper adoption of the euro in the corporate sector at the start of Emil.

The European Commission will raise the issue at a meeting of national accountancy and tax enthorities tomorrow. However, some officials have acknowledged that compenies will not have the right to pay their taxes and accounts in euros in 1999 unless their govern-

The issue hes provoked irritation from business groups, who suggest that it may contravece the spirit of the Emp timetable.

"We are becoming really very concerned about the public administration's relative lack of preparation for Emu - everybody is urging companies to get ready, but what are the governments

The official Emu scenario stipulates that nobody can be either "compelled" to use or "prohibited" from using enros in the transition period between 1999 and 2002. During this period the euro will exist as a unit of account, but national notes and coins will continue to circulate.

Several large EU companies, including Siemens and Philips, want to switch to accounting in euros as soon es possible in 1999. This move has been welcomed by EU governments, as a sign of faith in Emu.

However, business groups argue that companies will be reluctant to follow this pledge if governments effectively "prohibit" them from paying taxes and accounts

competitive distortions."

licly that it will accept corporate payments in euros in 1999. The German and French governments bave not made e public decision. One French official said: "The matter is still under

debate. But they have privetely indicated to business groups that they may not be ready to accept payments in both national currencies and the euro in 1999. And some French observers believe that it will be difficult for the French government to copy the Belgian move.

Mr Pierre Simon, a director of the group Campagnie research group on the issusaid: "It is easier for the Belgians - they are used to handling many currencies."

However, Unice is pressing the European Commission to raise this issue et the summit of EU governments in Dublin next month.

And French business groups are now lobbying their government over the sion like in Belgium - they A senior official at Unice. So far Belgium is the only want to be able to pay taxe the EU business group, said: EU country to pledge pubin euros when they want." want to be able to pay taxes

### Warning of delays to 'Labour market disparities may widen'

Adoption of a single currency could widen the disparities among regional unemployment rates in Europe, with moves towards greeter lebour market deregulation making things even worse, according to

new research. A report commissioned by the Leverbulme Trust from academics at Cambridge University argues that regional unemployment retes in Europe bave shown little tendency to converge in two decades. This poses a potential obstacle to the achievement of regional cohesion across the European Union, the academics argue.

These findings chime with the views of Mr Eddie George, the governor of the Bank of England. He has argued that the discussion of preparations for a single currency has rightly concentrated on bringing inflation rates, government deficits and currencies into line, but without taking sufficient account of differences

between labour markets. "In labour market terms there is little evidence of any widespreed convergence amongst regions, but rathe of persistent disparities," the Cambridge team argues. This implies thet monetary integration could well exacerbate the scale of regional unemployment disparities across member states.

The EU runs the risk of interest rates as it moves toward a common currency. Standard & Poor's has warned, AFP reports from New York. The agency's study of European monetary union, released today, also says the adoption of a common exchange rate would "accelerate the flight of manufacturing capacity to low-cost areas".

Differences among unemployment rates in the various European regions have been very persistant, affected only temporarily by the ups and downs of the business cycle.

PANASONIC

This suggests thet the forces underpinning these differences must be deeply rooted in the economic and institutional fabric of the areas concerned, the academics argue. "The implication is that even quite large improvements in the labour market flexibility of the least prosperous areas of the EU may not have much impact on the scale or pattern of regional unemployment dif-

Newly published research by economists at the International Monetary Fund has also emphasised the dangers posed to the single currency project by differences in labour markets across the

ferences either within indi-

vidual countries or between

continent. It points out thet Europe has a much less integrated lebour market than the US - partly because of the lack of a single language.

The study argues that Europeans find it relatively easy to move to jobs in dif ferent industrial sectors, but that lebour does not flow easily across national borders.

European Regional Unemployment Dispartties: Convergence or Persistence? by M. Baddeley, R. Martin and P. Economy, Combridge Universitu. Currencu Unions, Economic Fluctuations and Adjustment: Some New Empirical Evidence, by T. Bayoumi & E. Prasad, IMF Working Paper 96/81.

INTERNATIONAL NEWS DIGEST

## Refugees trapped in a deadly maze

Complex struggle in Zaire could end in a brutal showdown, writes Michela Wrong in Gisenyi

s the daya have stretched into weeks A stretched disconnectional community has agonised over sending troops to save more than 1m Rwandan refugees trapped in east Zaire. the shouts of alarm from aid organisations have been rising to a crescendo.

But eveo when images of refugees dying from hunger and disease start filtering through rebel lines, ending a virtual media blackout effective action to set up humanitarlan corridors drawing the refugees home to Rwanda will remain in

For if the controversial French intervention in Rwanda in 1994 was fraught with difficulty, the risks now confronting an international operation two years later are far greater, the dangers of

failure more extreme. When Paris launched "Operation Turquoise" to establish a safe zone in Rwanda, the base for its logistics. Zaire, was a relatively stable country and an ally France could depend on.

The Interahamwe militiamen and former soldiers spearheading the postnocide mass exodus from Rwanda regarded the French soldiers as rescuers and were prone to co-operate. The advancing Rwanda Patriotic Front rehels were furious, but they balked at taking on French troops.

Today the scenario is far more complex. President Mobutu Sese Seko, the international community's natural interlocutor, lies weak in his Riviera villa after cancer treatment. Analysts question the very survival of Zaire as

A four-pronged rebel coalition now controls access to Goma airport, the natural centre for relief operations. The strength of the group's alliance and its precise relationship with the Rwandan government backing its annexation of much of Kivu province remain unclear.

Well armed and desperate, the extremists who carried out Rwanda's genocide and have controlled the camps along the frontier are ready to use the refugee population as a human shield and likely to regard any outside interference as a threat to their existence.

To top it all, France, the only nation ready to take the lead in an international miliintervention, tary regarded by the rebels, the Rwandan government and some western nations as too tainted by its friendship with the regime of the late President Juvenal Hahyarimans to be allowed to play

A Tutsi rebel pushes back refugees with his gun at a food distribution centre in Goura

Last week both Rwandan President Pasteur Bizimungu and the rebel Alliance of Democratic Forces for the Liberation of Congo-Zaire categorically ruled out French participation, As Mr Seth Kamanzi, the president's adviser, commented: "The French have been part of the problem of this region. they cannot be part of the

The Rwandan govern-ment's views matter. After Goma, Kigali would be the obvious choice for an airport where large numbers of foreign troops could land.

There was a time when there was room for optimism. Originally, aid organi-sations believed the rebels' drive to empty the Kivu camps, neutralising the extremists who have destabilised the Tutsi regimes of Rwanda and Burundi, had succeeded in breaking the power of the men blocking a

mass return. That hope evaporated last

week as aid workers reported that Mugunga - the week as camp west of Goma which was at one point believed to bave been abandoned - was full again and the extremists preparing for a final showdown with the Rwandanhacked rebels.

"The refugees are moving in an organised way, not willy-nilly in all directions," reported a Kigali-based diplomat shortly before s ceasefire collapse and new fighting broke ont. "The susplcion is that the Intera-

hamwe are still in control." In such circumstances, the original idea floated by the United Nations High Commissioner for Refugees of self-policing humanitarian corridors seems misplaced, a full-blooded military intervention unavoidable.

The medical charity Médecins Sans Frontières (MSF) says any international force sent with a UN mandate weaker than Chapter Seven allowed troops to launch a manhunt for Somalia's warlord Mohamed Farah Aideed would be worse than use-

"We have to accure the area, not defend aid workers," says Ms Samantha Boulton, MSF spokeswoman. "Separating the extremists from the refugees is not going to be done by defending a food coovey.

As the anguished dehate drags on, several possible scenarios are unfolding: worlds, the refugees would

reject their leaders and drift back to Rwanda of their own accord, pushed by the realisation no more food will be delivered in Zaire. This seems doubtful, given the lynchings used to cow refugees in the past.

M An international force could go in, guns blazing, to separate the extremists from their subject population. But as the Rwandan government - the mandate which estimates the number of

intimidators at 150,000-200,000, this would mean declaring war on a sizeable community - a prospect most western nations would

balk at. The refugee population could be pushed west by the rebels, settling in the hills of Masisi. This would raise the possibility of clashes with indigenous Zaireans and create a Hutu homeland which would continue, from a greater distance this time, to destabilise neighbouring countries. The rebels and Rwandan government are unlikely to agree.

In the worst-case scenario. the last chapter of Rwanda's civil war will be fought in Kivu as the rebels purge the extremists in Mugunga, heedless of the danger to the

refugees.
Analysts are already talking of "Mugunga's last stand" and a tragedy that could dwarf what happened in Kiheho, when Rwandan troops attacked a camp bolding armed extremists and hundreds, if not thousands.

died in the stampede.

Many believe the reason media coverage of the conflict has been so carefully controlled is because the rebels are determined not to allow shocking television coverage of such a showdown that could force the international community to act and discredit Kigali and

its friends in western eyes. The Kibeho option may not be an option people want to see, but it may be the only one left," says an official from the International Organisation of Migration. 'It will be a disaster, but I think we are moving in that

### Call to ease third world debt

Developing countries owe \$245bn-\$300bn to non-OECD official creditors, primarily Russia and Gulf Arab financial institutions, according to oew estimates by the United Nations Conference on Trade and Development. The figure - equivalent to a quarter of total developing country debt - is much higher than previously thought.
For some debtor countries, such as Angola, Ethiopia,
Mauritania and Mozambique, non-OECD debt makes up

more than 50 per cent of their total deht. The study says arrears have grown in the 1990s while new loans have fallen sharply in the wake of the collapse of the Soviet Unioo and economic constraints on the Arab

oil states. In sub-Saharan Africa, a prime target of the recent initiative by the World Bank and IMF to help heavily indebted poor countries, Russia and Arab financial institutions together account for 83 per cent of non-OECD debt. Russia alone is owed \$16.8bn by countries in the

The study calls for measures enabling relief to be granted on non-OECD debt on similar terms to those already agreed for OECD debt in the Paris Club and Frances Williams, Ge Reducing sub-Saharan Africa's debt to non-OECD official creditors: Sharing the burden. Available from Unctad.

#### Israel opens doors a little

Israeli security forces yesterday moved closer to lifting the eight-month-long closures of the West Bank and Gaza after allowing 35,000 Palestinians into Israel to work. However, certain restrictions will remain - only married men over 30 will be allowed to enter Israel and they will be permitted to work only in certain sectors, such as agriculture, hotels and factories.

Mr Samir Hulelleh, a Palestinian Anthority official, said the closures had led to a sharp fall in revenues, while gross domestic product per head had fallen by 25 per cent. The easing of the closures coincided with renewed

tension between Israeli defence forces and Palestinians in the West Bank town of Ramallah, scene of violent clashes in September. A Palestinian was shot dead and 11 were wounded after 200 Palestinians had protested against the confiscation of 500 hectares earmarked for Jewish Judy Dempsey, Jerusalem

#### Malaysia expels activists

Malaysia yesterday began deporting foreign activists who took part in a controversial conference on East Timor. But the government denied it had backed the youths who hroke up the meeting.

An immigration department spokesman at Kuals

Lumpur airport said 16 activists were expelled. They included five Australians, four Americans, three Japanese, two Portuguese and two Sri Lankans, "Another 10 may leave today," he said.
Deputy Prime Minister Anwar Ibrahim said the

government did not sanction the actions of the group which broke up the conference, although the youths belonged to groups allied to the three main polltical parties in Prime Minister Mahathir Mohamad's ruling coalition.

The Malaysian government said last week it did not want the conference held as it could harm relations with Indonesia, which invaded East Timor in 1975 and annexed it from Portugal the following year. Renter, Kuala Lumpus

#### Burmese dissident harassed

Mobs acting with apparent approval of the Burmese military junta roamed parts of Rangooo yesterday, after one group attacked Ms Aung San Suu Kyi and other leaders of the pro-democratic opposition on Saturday. But fewer were on the streets and no further violence was reported. A 200-strong mob set upon cars carrying Ms Sun Kyi

and two key supporters on Saturday, using fists and sticks to break windows and dent the vehicles. The dissident leader said the mob actions were orchestrated by Burma's military regime. In Washingtoo, the US State Department urged the Burmese authorities to punish those to blame for the attack and to "take every possible means" to ensure Ms Suu Kyi's safety.

#### Bangladesh political tension

The opposition Bangladesh Nationalist party (BNP) yesterday decided to boycott an important parliamentary debate and threatened to stay away from the whole session of parliament unless 10 demands were met. The BNP deputy leader, Mr Badrodozza Chowdbury, said it was meaningless to join the current session of parliament "if we are constantly ridiculed on the floor of the House and outside it".

The decision is another sign of growing tension between the government and the opposition only five months after relative calm returned to the country with the election in June. "We do not want to resort to street agitation, but if the government pushes us to that point, theo we would have no choice. We still believe that good sense will prevail on the government side," said Mr Chowdbury.

The BNP's demands included the appointment of an impartial Speaker of parliament, objective political coverage by the state-run radio and television, and an immediate improvement in law and order. The party says its members have come under increasing harassment and even physical attack.

#### BP in \$900m Oman venture

Oman said yesterday it had appointed BP Chemicals – a unit of British Petroleum – as its partner in a \$900m petrochemical complex to produce 450,000 tonnes a year of ethylene and polyethylene. The official Oman News Agency quoted Minister of

Commerce and Industry Makboul bin Ali Bin Sultan as saying the complex would start production by the year 2000. Teams would meet from today to discuss details of the project, which be said was an important part of the sultanate's industrial strategy.

#### Oil strike threat in Venezuela

Venezuelan oil workers bave protested - and may go oo strike this week - over the opening of the industry to private sector companies. Fedepetrol, the oil workers' union, filed a petition last

receptant the on works and said it might go on strike in the country's most important oil producing state. Zulia, if talks due today with Petroleos de Venezuela (PDVSA), the state oil company, failed. Zulia accounts for over half of the country's oil production.

The workers fear private oil companies contracted by PDVSA may not respect collective labour contracts. They could then lose important benefits, such as health, education and food bonuses. Raymond Colitt. Caracas

#### Lebanon casino to reopen

Casino du Liban, a famed Middle East entertainment establishmeot before Lebanon's 1975-90 civil war, will reopen next month after being closed for more than 20 years. It will open to the public on December 4, a day after an official opening by Lebanese President Elias

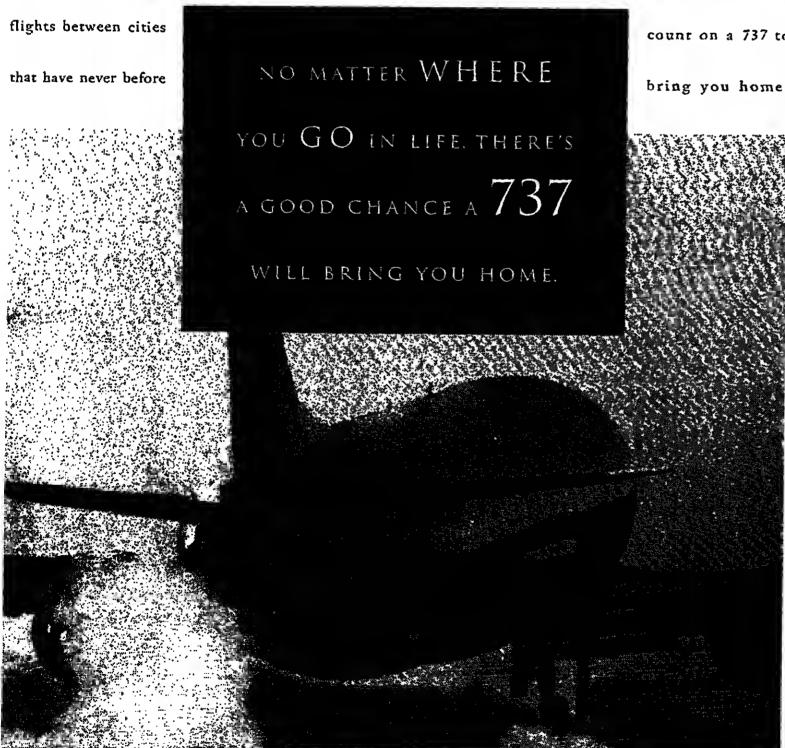

The casino, once a symbol of Lebanon's high life, was damaged in battles between rival militias during the war. Compagnie du Casino du Liban signed a \$50m syndicated loan agreement in May with 10 Beirut banks to finance renovation of the casino, which overlooks the bay of Jounieh north of Beirut

More people fly on a Boeing 737 than any other airplane. In fact, 737's have carried nearly 4 1/2 billion passengers all over the world. What accounts for this success? In a word, value. For passengers and airlines alike, the 737 offers the best on-time record in history. Plus economical

STEEDING WAY

# Beijing to retaliate over US trade curb ILO changes

China will taka retaliatory action against the US for curbs on Chinese textile exports by temporarily suspending imports of some US products, the Xinhua news agency announced yester-

The suspension will take effect from early next mouth and will cover Chinese imports of some US textiles, egricultural products and alcoholic drinks.

Xinhua condemned the US decision to cut import quotas on Chinese textiles, say-

the bilateral textile agreement". The agency accused Washington of imposing penalties without full consultation and clear supporting

In September, the US cut Chinese textile and clothing import quotas following customs investigations, which it alleged had uncovered widespread fraud in shipments of Chinese-made clothing to the

At issue were, products apparently originating from China but falsely identified as being made in other countries in order to avoid US

In addition to cutting import quotas on 18 categories, the US for the first time imposed punitive "triple" charges in five categories where there were thought to have been repeated violations. The action was expec-

denied the allegations, saying Chinese enterprises were the victim of frand by importers and third parties. Mr Li Dongsbeng, director of the trade administration department at the ministry of foreign trada and eco-

ted to cost China \$19m.

Chinesa officials hava

essential evidence to prove ments were compiling e list. that the goods originated in China".

He said that in at least one case the transhipment of the goods was "a conspiracy by US importers and lawbreaking businessmen outside the Chinese mainland, whila Chinese enterprises were

China said it had urged the US to withdraw its decision but its plea had been ignored, leaving it with no choice but to take action. Xinhua did not indicate which specific products nomic co-operation, said last month that the US "lacked would be targeted, but said

China's exports to the US have soared this year, but a 35 per cent fall in the volume of textile exports has left Beiling grumbling against US attempts to set up "barriers" in the textile trade.

A change in US "country of origin" customs rules which came into effect in July prompted China to attack the US for damaging Chinese enterprises and further reducing the country's

"already insufficient" quota. Sino-US treda relations have seen a number of ups and downs - with a trade

earlier this year, after the US threatened to impose up to \$2bn in sanctions on China for lax protection of intellectual property rights. China may appeal to the International Court over the European Union's decision to impose tariffs on Chinesemade shoes to stop alleged dumping, an official newsp per said yesterday, AP

reports from Beijing. The China Daily Business Weekly said shoemakers affected by the tariffs were asking the Chinese government to take legal ection. China protested against the

# tactics on labour reform

By Frances Williams

in Geneva

The International Labour Organisation is to explore new ways of promoting good employment practices and social responsibility among

These might include an ILO-sponsored code of practice for multinational corporations and an extension of "social" labelling schemes such as the Rugmark.

The ILO's first "enterprise forum" ended e two-day ses-sion on Saturday. It signals an important switch of emphasis for the organisation, which has become increasingly concerned about its effectiveness

Mr Michel Hansenne. director-general, said last week that the ILO's traditional standard-setting activities were inadequate to cope with the globalisation of the world economy and the increasing economic and social power of multinationals. If the ILO wished to continue as the "social conscience" of the international directly, he said.

The ILO, the oldest United Nations agency, established in 1919, has a tripartite membership representing governments, employers and trade unions. But the system is breaking down with fewer workers joining unions and a decline in governments control of economic events.

Many companies have adopted their own ethical codes, but there was broad agreement et the forum that more generally epplicable guidelines were needed. The 600 participants included executives from Body Shop, ikea, Bechtel, Lufthansa, Hitachi and Shell, as well as academics, trade unionists, amployer representatives and government officials.

The ILO is planning a detailed study next year of such "social" labelling schemes as the Rugmark, which certifies that carpets have not been made with child labour.

The forum also discussed a proposal for ILO awards to enterprises with good

### US group to invest in China entertainment

MCA, the US entertainment giant. plans to invest at least \$200m in China by the year 2000 - in ment centres, including picture theatres, in retail outlets and

possibly in theme parks.

Mr Edgar Browlman, chairman of Seagram's, parent company of MCA, said there was "huge potential" in the entertainment industry in China. The company was according its China investments

Tropicana Dole Beverages of

North America, a unit of Seagram's beverage group, was also stepping up its presence in China with plans to invest \$20m-\$30m in processing and distribution facilities in southern regions and in the "Three Gorges" area of south-west

Sichuan province. Tropicana is seeking to develop a citrus-growing and processing base in the Three Gorges region, where China is building a \$30bn hydroelectric power project on the Yangtze. The work is displacing an estimated Im people but Tropicana, in partnership with China's

could become the country's Flo-

Mr Stephan Herbits, executive vice-president for corporate policy at Seagram's, said the "family company" was taking its time over its China investments because it could afford to take e "longer-term view". But he said it intended to step up its involvement.

The company was also pressing China to lower duties on imported liquor - excise on liquor is about 70 per cent - and tighten customs

ministry of agriculture and local procedures to eocourage orderly key cities.
authorities, believes the region distribution. Liquor smuggling is Mr Bronfman said that within

relevant government depart- war only narrowly averted

Mr Bronfman said that among possible longer-term projects for MCA was a theme park in southern China. MCA was interested in "citywalk" projects, multiplex cinema centres throughout the country and retail outlets pri-marily for MCA products.

But the Seagram's chief made it clear MCA would start cautiously. It was considering "concepts" with local partners, such as smallerscale entertainment complexes in

six months he expected MCA to be "doing rather than talking". MCA, which Seagram's acquire from Matsushita in 1995, produces and distributes motion pictures, TV series, home video products

Competition among foreign com-panies for involvement in China's heavily regulated entertainment industry is intense. Disney, MGM. News Corporation, Sony, Time Warner and Viacom are among groups jostling for market share.

### Egalitarian dawn fails to inspire cynics

PAKISTAN By Mark Nicholson-

It was unprecedented, and The News caught it with a the risks that Pakistan prime minister took a seat in taking," wrote Duon. It was economy class, rather than carefully ambiguous about economy class, rather than the usual front row of first. Did this gesture from Mr Malik Maraj Khalid herald a new egalitarian dawn for Pakistan? Does his interim

government's dismantling of "VIP culture" represent the first broom stroke in the cleansing of Pakistan's corruption after last week's dissolution of Ms Benazir Bhutto's government? Not seconding to Pakis-

tan's cynical press. While The News on Saturday mutteringly commended Mr Khalid's gesture as "a record. of sorts", The Nation was reminding its readers that they had seen it all before. Hadn't Gen Zia ul-Haq, Pakistan's last military dictator, once ostentatiously ebandoned his limousines for e more "populist" bicycle only to give it up when he got bored? It will not last, said The Nation, and barely

in fact Mr Khalid's economical flight to Labore was about the sole instance of "sincerity" or "good faith" visible in the pages of Pakis-tan's press since Ms Bhutto's eviction by President Farooq Leghari, Intrigue, conspiracy and scepticism otherwise provided the roughage of the

This was mixed with weary comment on the predictability of Ms Bhutto's ouster and deep suspicion that little real change lies ahead. Benazir Bhutto had it coming." wrote the Friday Times. "She was an arrogant, reckless, capricious and corrupt ruler that surrounded herself with sycophants, lackeys and flunkeys and squandered a second opportunity to serve the people of Pakistan."

But if Ms Bhntto's removal came as no surprise, it offered some entertainment at least, according to a perky at home. column in The News by Masud Akhtar Shaikh, a retired colonel. "For the public it provides a real thrill, the Nation, "Imran and his breaking the monotony of the usual political chow consisting of the boring and repetitive statements of politicians."

However, there were also repeated warnings in the weekend papers that Mr Khalid'e administration politics, Page 9

must not outlast its allotted 90 days and that fresh elections must follow on the prescribed date of February 3. "Any other course will invite what "Pakistan" in the sentence refers to, but perhaps kept in mind the rumble of

army tanks. . The army's invisible hand was widely discerned as hav-ing acted against Ms Bhutto, and in some quarters the motives of Mr Leghari were suspected. Mr. Syed Nadeem in The Nation informed front page readers that the president's intention appeared to be to ramove Ms. Bhutto from the leadership of the Pakistan Peopla's party and make it his own. "By trying to eliminate Benazir politically and legally, he has the next elections."

Mr Nadeem, and others, . also wondered when general accusations of corruption and responsibility for extrajudicial killings in Karachi might emerge as defined legal suits against Ms. Bhutto Many felt Mr Leghari's credibility, and indeed legitimacy, would be at risk unless specific charges soon replaced general accusa-

Sevaral commentators raised the risk to Pakistani democracy Itself if the interim government lingers. Not that the commentators seemed to have had much faith in Pakistani democracy in the first place. The News noted on Wednes-

last 12 premiers had been removed from office. So wherein lies the hope for Pakistan? Not, according to the Pakistani press any way, in Mr Imran Khan, the formar cricket captain turned politician. He may be much championed as Pakis tan's great white-flannelled but the launch of his new party's campaign occasioned little comment or coverage

Without any "concrete economic, or political, or international agenda", wrote people can only hope to win votes on the basis of their reputations as fresh people with fresh thinking." And few of Pakistan's worldweary hacks are likely to consider that enough. FT guide to Pakistan's

SINGAPORE ÅIRLINES

### look to **Argentina** again

By David Pilling in Buenos Aires

Argentina will attract \$20bn in foreign direct investment between 1995 and the year 2000, with the US and Chile heading the list of investors, according to a report from the UN's Economic Commission for Latin America and the Caribbean.

The antomobila industry accounts for nearly a quarter of realised or pledged investments, with food and tobacco, petrochemicals and construction attracting a further 40 per cent.

US companies will provide 35 per cent of FDI. with those from Chile accounting for 11 per cent, France for 8 per cent and Canada. Britain, Italy, Spain and the Low Countries around 5 per cent each.

Mr Alieto Gnadagni, sec-retary of trade and industry. said FDI continued to grow rapidly last year despite the effects of the Mexican devalnation which saw much portfolio investment flee Argentina. In 1995 it attracted FDI of \$3.9bn, \$2.7bn more than in 1994.

Mr Guadagni, criticised by some local manufacturers for abandoning the government's role in fostering industry, said the figures proved the best way to promote productive investment was to offer economic and legal stability. These, plus access to the Brazilian market through the Mercosur customs union, explained Argentina's attraction for

Most important among the yet-to-be-released study's findings, Mr Guadagni said, was that 67 per cent of foreign investors were newcomers to Argentina, attracted by economic reforms begun in 1991.

The minister admitted PDI would do little to tackle unemployment, now at 17 per cent. Foreign investors tended to use the latest technology and were not big

# Investors New chief of staff eyes budget fight

By Gerard Baker in Washington

At first sight, the choice of Mr Erskine Bowles as Presi-dent Bill Clinton's new White House chief of staff looks an unusual ona.

The president starts an uncertain second term facing a still Republican dominated Congress, and the smart monay might have been on a more battle-hardened veteran of Washington's partisan politics to fill what will he perhaps the crucial position in the new administration.

The 50-year-old, slightly donnish North Carolina investment banker certainly lacks the lengthy political experience that was the hallmark of his predecessor, Mr Leon Panetta, a 16-year veteran of the US House of Representatives, former House budget committee chairman, and director of the Office of Management and Budget.

Mr Bowles's sole departmental administration exnerience so far has been in the decidedly calmer

New White House chief of staff Erskine Bowles at a press conference after his nomination by President Clinton. He is an investment banker and former top White House official Room

Business Administration. Howver the new chiefs credentials as a presidential insider could hardly be stronger. And be has critical experience at the highest level in one area that the

cated will be his top priority one of the members of the in the next two years - budget negotiations. For a year from late 1994

he was at Mr Panetta's side as a deputy chief of staff in the White House.

He worked alongside Mr Dick Morris, a close adviser who resigned in August after

inner team of presidential advisers that plotted the strategy for Mr Clinton's re-

with a prostitute, Mr Harold Ickes, another deputy chief of staff, Mr George Stephanopoulos, a senior presidential adviser, and Mr Panetta him-

Mr Bowles's influence is likely to be enhanced by the fact that all the others have either left office, or seem likely to leave soon.

He was a valuable lieutenant for Mr Panetta in last year's budget negotiations with the Republican Congress, a battle that marked the turning of the tide in the Democratic party's fortunes after its disastrous defeat in the mid-term elections in

He was influential in persuading the president to accept the principle of setting a target date for a bal-

Mr Bowles's other main contribution was to coordinate the work of the White House and tha campaign team. He was charged with

bringing order to the sometimes chaotic activities of the ideologically disparate

Announcing his appointment on Friday. Mr Clinton said Mr Bowles had been responsible for "bringing focus and direction to our efforts," no small feat in the Clinton White House.

Mr Bowles, a southerner like his president, is firmly in the fiscally prudent, eco-nomically conservative wing of the Democratic party. He was a leading southern fundraiser for the aspirant presidential candidate in 1992 and was rewarded with the top job at the Small Business Administration in March

In spite of a declared wish to return to his home and the private sector (he left the White House a year ago), he arrives instead in the unfamiliar glare of a front-line job. Ha will not have to wait long to have his mettle tested - his first job this week will be to take part in first round of meetings with congressional leaders on ways to balance the bud-

### Summit to condemn US law on Cuba

Leaders from Latin America. Spain and Portugal prepared yesterday to issue the region's first explicit condemnation of a controversial US law that seeks to punish Cuha. AFP reports from

The 23 leaders at the sixth annual Ibero-American summit were to call on the US to reconsider the application of [the] law, which goes against international princh ples," according to a draft of the summit's final declara-

due to be issued today. The so-called Helms-Burton law which seeks to sanction non-US companies doing business using assets confis-cated after the 1959 Cuban revolution - has hurt the pride and pocketbooks of Washington allies with investments in Cuba, including the European Union. Canada and Mexico. The Latin American nations are reluctantly defending Cuba, and are eager to prevent the US from determining foreign policy for the entire region.

tro was the first leader in Santiago to publicly attack the US. criticising "extra-territorial laws and criminal blockades by that same power that repeatedly has invaded countries of the region and intervened in the internal affairs of our coun-

Although the summit dec-laration is likely to give Havana a diplomatic boost in its battle with Washington, Cuba "did not come here necessarily to seek support in condemning the Helms-Burton law," said Mr Roberto Robaina, Cuban for-

However, Latin America is particularly sensitive to any unilateral punitive measures by the US

### S, EU closer on telecoms and IT accord

By Nancy Dunne in Chicago

US and EU officials this deals liberallsing telecommunications and information technology trade and vowed to reach agreement to ease costly regulatory barriers to exports of telecommunications products, pharmaceuticals and medical devices by January.

Pressed hard by a year-old coalition of almost 200 US and EU business leaders, officials found the Dexibility to move forward nn deals which had been bogged down at the bargaining tables in Brussels, Washing-

ton and Geneva. While meeting business executives and government officials gathered in Chicago at the weekend, ministers said progress bad been achieved in three areas: ■ The US and EU agreed to table improved offers for a

telecommunications services. Spain agreed to open its market completely in 1998 and the US added liberalisation of submarine cable services to its package, with the promise of adding satellite link liberalisation if "a critical mass" of other countries offered betier deals.

### Irish deputy PM faces criticism

Mr David Trimbie, leader of the Uister Unionists, the largest pro British party in Northern Ireland, yesterday ed an unprecedented personal attack on Mr Dick Spring, the deputy prime minister of the Irish Republic, accusing him of being "a jumped-up little man from Dub-lin", and describing his involvement in Northern Ireland's affairs as "an impudence".

The attack, during an interview on Sky television, follows Mr Spring's comments last week that Mr John Major, the British premier, is "big enough" to risk losing the support of Mr Trimble's party at Westminster to secure a solution in Northern Ireland.

"In effect he's saying that the largest party, the Ulster Unionist party, should be ignored," Mr Trimble said. Dublin, along with the moderate nationalist Social Democratic and Labour party are pressing Mr Major to provide further reassurances about the direction of the Stormont talks in the hope that this will be enough to secure a reviewed IRA cessation. Mr John Hume, the SDLP leader, speaking at his party's annual conference in Cookstown at the weekend said Mr Major could achieve "lasting peace" if only he would state "in the clearest possible terms the nature, objectives and timeframe of the John Murray Brown, Dublin

#### **OFFSHORE REGISTRATION**

Firms face obstacles over Jersey Firms of professionals seeking to limit their legal liabilities have run into a further obstacle to their plans to register in Jersey under a new law designed to protect the personal assets of partners.

The Inland Revenue in Britain has said that firms which become limited liability partnerships under Jersey law may be taxed as if they were companies - possibly incurring higher tax liabilities than if they remained as UK partnerships. The move was widely seen as a signal that the government is prepared to make the off-shore option as unpalatable as possible - particularly for the nig accountancy firms which helped to frame the new Jer-

Last week Mr Ian Lang, the trade and industry secretary, announced that the UK would next spring publish detailed plans for its own version of limited liability partnerships. However it was unclear when such a law could be enacted with a general election imminent. Jersey, largest of the Channel Islands between England and FRance, has Queen Elizabeth as head of state, but makes its own laws and raises its own taxes. Jim Kellu

#### **GOLDMAN SACHS**

Trader's resignation link denied Goldman Sachs, the US investment bank, has denied any link between the resignation last week of a senior bond trader in London, and rumours of irregular bidding and substantial losses during a gilt auction two weeks ago.

"There is no connection between this resignation and recent events in the gilt market," Goldman said. The trader, Mr Andrew Duthie, was hired by the bank 21/2 years ago from Salomon Brothers, when Goldman was building up its UK bond operation. His resignation was rumoured to be linked to losses allegedly sustained by Goldman when gilt prices fell sharply on October 24, wiping up to £8m off the £1.5bn bond auction held earlier that day. Goldman also categorically denied any irregularities in bidding during that auction. Richard Adams

That is what the rest of the Republican party had been saying, too, with their incessant complaints about the "liberal media elite" rather than the people setting the agenda. Bill Clinton is not terribly fond of the fourth estate either these days. and with good reason. He has not been exactly inaccessible in pur-suit of re-election, but Friday's formal press conference was the first since the journalistic equivalent of the 15th century.

# Media-driven democracy on trial

Now, as a charter member of this so-called elite, whose coat of arms, when the honour comes, will portray a gatekeeper rampant with his foot on the neck of Newt Gingrich, your correspondent may be excused for a certain sense of "déjá vu all over again", as Yogi Berra - the baseball player and manager, not the cartoon character - was fond of say-

It is, after all, 34 years since a politician who later became president said to the California press: "You won't have Richard Nixon to kick around any more." In his case, as with countless others, it was true that familiarity bred contempt or sometimes some-thing worse - admiration. The lesson is that a little distance between politicians; and those ing and analysing what it sees and can discover, it sets itself up who cover them is desirable (the golf course excepted, please Mr

DATELINE

North Carolina: a liberal elite of communicators stands accused of having set the US presidential campaign agenda,

**Jurek Martin** The real generic trouble with American journalism is that it takes itself too seriously. But it can be downright dangerous

when, rather than merely report-

writes

between those seeking election spending, affordable bealthcare cluded, not unreasonably, that and those who pull levers and and education. this was hardly halpful and press buttons in the voting

That is what happened this year in North Carolina, when a doubtless high-minded experiment in what is grandiosely called "civic journalism" may have ended up a disservice to the good citizens of the Tarheel state (they do produce tobacco down there, but that is another story). It was called, catchily, "Your Voice, Your Vote" and it worked

like this. Six state newspapers and nina radio and TV stations commissioned an opinion poll to find out what was most on the mind of the citizenry. All state-wide candidates - 13 in the primaries - were then invited to sit down to explain their views on the identified subjects, the first tier, unsurprisingly, consisting of crime and drugs, taxes and

Of course it was the news organisations that compiled the poll's questions, which somewhat undermined its real probing of the North Carolinian mind. Nor did they play quite fair with the results. Families and values was actually rated fractionally higher than taxes and spending, but the unilateral decision was taken to put the latter in the first

The first problem arose when Senator Jesse Helms, typically but hardly anexpectedly, refused to co-operate. Newspapers had designed ettractive matrices in which candidate answers - in their own words, not filtered by a reporter - would be placed in

rank.

Tha Raleigh newspaper initially ran white spaces against the Helms column, but conout at exactly the time that the national Democratic party was fending off all sorts of nasty questions about which Asian businessmen gave it how much money and for what purpose.

The writing etiffa also complained about the diversion of began cobbling together answers resources to the Your Voice, Your Vote project and away from from his known positions and occasional comments (Jesse the bread-and-butter job of actual always says of the state he has campaign reporting. Final week represented since 1972, "it knows rallies for both candidates were what I stand for," and he is probconspicuous for a low press turn-What irked many local report-

out (presumably the rest were designing new matrices). Pat Yack, editor of the Greens boro local paper in North Caro-lina, concedes ambivalence. It was, he says, "an ettempt to move beyond electoral political rhetoric to ideas". But he allows that, "it is fair criticism that we're setting the agenda, not the

politicians." The bottom line is that it made dept in the lack of real no difference. Helms got 53 per cent of the vote, which is the exact average of his previous four victories. He did not like the foundation set up by Helms had been wall financed by foreign

The Monday Profile: Jon Huntsman, Huntsman Corporation

### Tycoon with a rare formula

usiness dynasties do not come much bigger - or richer - than the one presided over by Jon Huntsman, chairman and owner of Huntsman Corporation, one of the world'e biggest privately owned chemicals companies. But Huntsman, a staunch Mormon known for his philanthropy, is keen to refute any suggestion that his company's size has made

him complacent.
He is anxious to double his company's \$4.5bn (£2.76bn) a year sales by the turn of the century, helped by acquisitions and a \$1bn-plus investment programme to expand output from his chemi-

cal plants in the US and Europe. Huntsman, whose personal wealth is put at \$1.5bn, relies more than most tycoons on help from his close relations. Of his nine children, Jon junior is vice chairman of the company, with other sons Peter and David chief operating officer and vice-president of the company's polymers group. Richard, a son-in-law, is chief financial officer. Huntsman, who is 59, has 31 grandchildren, some of whom are already being groomed to play an active part in the business next century.

Jon senior says he plans for the long term. "We are a stable business, and we're looking ahead in an expedient and efficient manner. We're not open to scrutiny in the way that a public company would be - it's good not to have to keep coming up with a new mousetrap every five minutes."

He wants during years to ease himself out of the job of running the company, leaving this to his children. "We're a family-run business, gently realigning. It's a magical thing."

A strong Republican supporter, Huntsman is well connected on the US political circuit and is on good terms with Baroness Thatcher who stayed in his luxurious lodge near his company HQ in Salt Lake City earlier this year. One of his best memories is an audience with Pope John Paul II in the Vatican in 1992. Huntsman combines the aura

of the hard-nosed businessman its replacement cost. It has also with that of the soft-centred fam-ily man. He made headlines with bad given up on. The two deals his pledge a year ago with his wife Kathleen to give \$100m over 10 years to set up a cancer research institute at the University of Utah, one of the biggest

corporate gifts ever. He started his company in 1982 following an earlier foray into making polystyrene containers for hamburgers. It has a reputa-

tion as a "bottom fisher". By buying chemical plants for knock-down prices at the bottom of the industry's cycle, the company has accumulated a huge production base at a fraction of tor say they will no longer deal

ambition to grow in Europe, where the company has only about a tenth of its sales. It is an open secret that he has knocked at BP's door to sound out its interest in celling come of its chemical assets, only to be rebuffed. There has been talk from people who know Hunts-man of his view of Europeans as "cartel driven" and lacking interest in dealing with brash American outsiders.

with him. He has not hidden his

In the US, Huntsman has been more successful in adding to his family empire, by means of two deals in the past two months. The company has spent an esti-mated \$150m buying two US businesses: the polystyrene manufacturing interests of Amoco. another big US chemical company; and Massachusetts-based Deerfield Plastics, the US's large est independent maker of polyethylene film for packaging.

Huntsman's philanthropic outlook continues to attract attention. The Huntsman company last year gave away \$28m to good causes, mainly to groups helping homeless people, medical research and education. Huntsman does not like to dwell on his policy of donations but says it is linked to his religion: "There is a keen sense of need around us and if there is something wa can do we will do it."

He is not a soft touch, however. "We get an incredible number of requests for money and the areas we are attracted to are not necessarily the ones where people seek our attention." In some of the philanthropic gestures, there is a hint of Huntsman also weighing the long-term business payoff. Huntsman has put \$15m into a concrete fabrication facility in Armenia to help the country recover from the earthquake of the early 1990s. That may help his company gain a foothold in a promising market in an important part of the developing world.

### Pakistan's politics

le Pakistan a democracy? Absolutely, a Westminster-style one with a popularly elected lower house and a senate elected by members of four popularly elected provincial assemblies. But there is also a president, elected by the senate and the provincial assembly.

How come its president, Parooq Legbari, has managed to dissolve the elected government of Benazir Bhutio two years before her term ends? Because General Zia ul-Haq. Pakistan's last military dictator, craftily inserted an amendment into the constitution - in case of emergencies - in 1984 permitting the president to turf out governments deemed to be harming the national interest.

So, was Benzzir's government harming the

national interest? President Leghari thought so; he accused it of mismanaging the economy, of committing widespread extra-judicial killings in Karachi, allowing corruption to run amok. And he listed other crimes, including wire-tappings. There was also the small matter of the army, which had lost patience with the Bhutto government and gave Mr Leghari the nod.

So the army is the real power in the land? Yes, but you won't catch politicians saying so in public. Consider the fact that 26 per cent of government spending goes on the army and that this will not be touched at all under a drastic IMF-led austerity programme designed to put the economy

in order, and you start to get the picture. Does this mean Benazir is finished? Not quite, she's a tough fighter and says she'll challenge the dissolution in the courts. There are precedents for a successful appeal. Four elected regimes have been given the presidential boot

since 1985. Two have won court appeals for rein-statement. If that fails, Benazir has the option of trying to rally her Pakistan People's party followers in a mass popular campaign.

her from politics, could she win elections, now set for February 3? It looks unlikely. Pakistanis seem to have grown disillusioned with her government. They blame it for steep price rises and associate it with corruption. If Nawaz Sharif, Pakistan'e main opposition leader, is also not barred from politics in a possible presidential purge, his strong support base in Punjab, Pakistan's most powerful state, might see him clear to victory.

But will the election be held on February 3? Pakistanis are highly sceptical. For one thing, the polling date falls during the Moslem fasting month of Ramadan, which would provide a practi-

cal impediment. For another, if anyone were to file a petition to the Supreme Court arguing that elections cannot be held without a fresh census. the last one was in 1981 - that would hold things up considerably. The constitution formally requires there to have been a recent census before general elections.

Would a census make any difference? It certainly would. The demographics of Pakistan have changed considerably since the last one.

particularly in the rising proportion of people now living in urban areas. The present pattern of constituencies skewe parliament towards an overrepresentation of rural areas - giving a stranglebold to the two entrenched political parties and their land-owning leaders.

Why is that?

Because Pakistan's polítical class comprisee largely rich, agriculturally based landlords, popularly known as "fendals". About 60 per cent of the present parliament, across both main parties, comprises such feedals. Their begemony is assured under the present system - something which has stood in the way of proper taxation of agriculture in Pakistan and thus places a heavy tax burden on the urban population and business. Industrialists say this cripples efforts to create a competitive, exporting manufacturing industry.

Any signs of a power shift in Pakistani politics? Maybe. Sharif, the first non-feudal prime minister, from a rich industrial family, who ruled from 1990 to 1993, damaged the myth that only a rich land-owner could take Pakistan's highest office. But a country with a 75 per cent illiteracy rate may take years to change its ways. Feudal politicians have coined a new phrase, "industrial robber barons". to describe such political upstarts. They describe Sharif as the ultimate example. His government was also sacked on corruption charges.

What about Imran Khan, the popular and glamorous former cricket captain. Isn't he breaking the mould of politics?

Not yet. His party is far too small and too poorly financed to make much of a dent, although his ettacks on corruption are popular.

So who was the last Pakistani prime minister actually to serve out a full term? Zulfikar Ali Bhutto, Benazir's father, who led the country through a full five-year term. He was re-elected in 1977 but arrested in a military coup and, on a controversial murder charge, hanged two years later. Not a propitious precedent.

an aggressive stalker of compa-

nies. Some in the chemicals sec

ness of Elf Atochem of France. At

Tax decisions, like interest rates, require a long-term horizon

in last week's inflation Report. the Bank of England's policy advice was clear in parts and opaque in others. It declared that interest rates should rise in coming months, but then mumbled unspecifically about the need for "an appropriate fiscal policy" in the Budget later this month.

The combination of forthrightness and equivocation is not the fault of the Bank. In the arrangements set up after eterling'e unceremonious expulsion from the European exchange rate mechanism in 1992, the government charged the Bank to give it public advice on base rates and private advice on fiscal policy. Any substantive references to fiscal policy in the monthly monetary meetings between Kenneth Clarke, the chancellor, and Eddie George, the governor of the Bank, are airbrushed out of the published minutes.

More is the pity. In common with the overrated fashion for giving central banks independent control over interest rates, this arrangement has meant that the importance of co-ordinating monetary and fiscal policy is dangerously underplayed.

The logic behind treating interest rate and budgetary policy differently in this respect is not clear. The case for both central bank independence and the UK'e current monetary arrangements - in which the Bank influences interest rate decisions through moral suasion - resta on a curiously inconsistent view of the frailties of politicians.

The implicit assumption is that finance ministers are short-

relied upon to raise interest rates, because this means paying an upfront political cost for economic benefits that accrue only slowly over time. That may be true. But, if so, why do we leave politicians in charge of so many other policy decisions? Alan Blinder, former vicechairman of the US Federal

Reserve, pointed out recently that decisions on the structure of the tax code require a long-term horizon just as much as interest rate setting. "There is a constant tempta-tion - which needs to be resisted

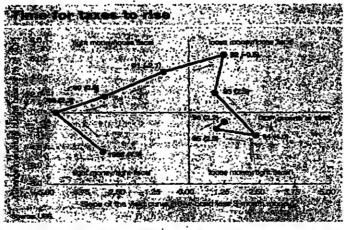

- to reach for short-term gains that may have negative long-run consequences," he cautioned. "And tax policy decisions are probably even more susceptible to interest-group politics than monetary policy decisions."

And yet no one argues that an dent budgetary authority

should tell the government how much it needs to raise from taxes once it has decided what to spend on public services. Yet the balance between taxation and spending can have just as much influence on the level of demand in the economy - and thereby on the extent of inflationary pressure - as the decisions on rates which politicians eupposedly

cannot be trusted to make. Some economists would argue that it is better to have one weapon used responsibly than neither. But having different authorities aiming different weapons at different targets can

create serious tensions. This danger is evident in the UK now. The economy as a that mance ministers who cannot be whole is growing at above the only just beginning to emerge would be preferable to higher

rate which has been consistent in the past with the maintenance of stable inflation, and it is set to continue doing so for some time. Underlying inflation has also talled to subsida during the recent period of below-trend growth, which suggests there is little spare capacity left to be used up before inflationary bottlenecks become more serious.

But some parts of the economy are nearer full capacity than others. Ontout in the service sector grew-by 3.3 per cent in the year to the third quarter. And, as the Bank noted in the Inflation Report, spending on services seems to be pushing up prices in areas such as catering, transport and insurance.

Surveys of service sector companies meanwhile show that recruitment difficulties are starting to emerge. Manufacturers, in contrast, are

from a year-long mini-recession. Factory production was still 0.1 per cent lower in the third quarter than it was a year earlier, while manufacturing investment has fallen sharply since the big increase it recorded in late 1995. The contrast between manufacturing and services mirrors what the Bank described as "the

emerging imbalance between

domestic demand and net exports" That imbalance is expected to get worse, with rapidly rising house prices signalling a further acceleration in consumer spend-ing, and cuts in government borrowing casting a shedow over European export markets. Sterling's 8 per cent rise since August is making life even more

whom are in manufacturing than the service sector. That suggests higher taxee

difficult for exporters, more of

interest rates. The evidence of the last three years suggests clearly that higher taxes would help restrain consumer epending, while keeping interest rates low would help exporters and encourage a revival in manufacturing investment

Samuel Brittan argued in the FT last week that it is difficult to manage demand with fiscal policy because it operates with long time lags and is uncertain in its effects. True enough, but the same applies to interest rates. Such evidence as we have suggests that a one-point rise in base rates has the the same impact on economic activity after two years as a 2p rise in the asic rate of income tax. Given the importance of boosting the economy's capacity, it is also worth noting that interest rate increases are twice as effective in discouraging investment as in discouraging consumption.

Fiscal policy should certainly not be used for fine tuning, there is much to be said for the dictum that policymakers should not change tax rates in one year if they expect to reverse the move in the next. Rut with tax revenues still mysteriously weak and the government running a bigger budget deficit than it should be with the economy this close to full capacity, there is a strong case anyway for increasing taxes to put the public finances on a

more sustainable path. Needless to say, this is not going to happen in this month's Budget. But if Labour wins the election, do not be curprised if it grasps the nettle within weeks of coming to power.

Good-bye Battery

Welcome to the future: Seiko Kinetic, the first and only quartz watch that turns your movement into power. Every move you make: is converted into electrical impulses by a tiny built-in powerhouse. Ecological, reliable and efficient: wear it just one day and produce::: energy to last at least two weeks. Wear it daily and it will run continually. 3 bar water resistant. Seiko Kinetic - it's built to last.

#### ou want to fly from Dal-las to Houston: so you telephone Southwest Airlines, the Texas-based company that pioneered low-cost air travel, and join the queue for a reservations agent. After a while, you hear a recorded

"If you have been on hold for more than five minutes, push 8," it says. So you push 8, and the voice comes back again. "This didn't speed your call, but don't you feel better? You can push 8 as often as you like until an operator is free to take your

Eventually, you get your ticket. A few days later, you are on Southwest Airlines flight 280 from Dallas to Houston. As the aircraft touches down, the public address system crackles into life and you await a rontine annooncement. Instead, to the tune of the theme song from the 1960s television series, The Bev-erly Hillbillies, flight attendant Holly Becker sings: "On behalf of Southwest Airlines, Captain Jed and all the crew, We would like to thank you folks for kindly dropping through. You're all invited back next week to this locality to have a heaping help-

ing of our hospitality."

Then, spoken in a broad, southern drawl: "Southweststyle, that is: fast planes, strong drink, and goooooood-lookin' women." The passengers roar with laughter.

Welcoma to Southwest Airlines, the seriously funny com-pany. Here, life is a hoot. Sometimes, flight attendants play tricks on passengers by hiding in the overhead luggage bins, and the safety instructions are usually an excuse for a comic turn. ("Those of you who wish to smoke will please file out to our lounge on the wing, where you can enjoy our feature movie presentation, Gone With The

It's the same at the Dallas headquarters. Everyone, including the hoss, waars casual clothes, Practical jokes and wise-cracks are not just tolerated: they are encouraged. Celebrations and awards break up the routine, and the walls are festooned with ribtickling pictures of employees in fancy dress.

Perhaps more than any other large company in the world, Southwest has taken to extremes the notion that work can be fun. But the serious side to the husiness is that It is also highly successful. Southwest'a low fares and relentless expansion have transformed the US air travel industry. Alone among US airlines, Southwest has made a profit every year for the past 23 years: last year, it made net profits of \$183m (£111.6m) on revenues of \$2.8bn. It has never had

Increasingly, Southwest has become a model for management give us back." gurus who argue that fun can be a hig contributor to profitability. If people are enjoying their jobs, the theory goes, they are likely to perform them better. And this seems to apply at Southwest, which pays good wages but keeps fares low by achieving extraordinarily high levals of productivity

from its employees Southwest often seems more akin company'a origins 25 years ago,

# The seriously funny airline

Southwest's wacky style has become a model for management gurus, says Richard Tomkins

almost fanatically committed, "I love coming to work every day," says Irene Schoenberg, a customer service supervisor at Dallas Love Field airport. "It's the lively atmosphere, the flexibility they allow us, and the fun we have. There are lots of parties, celebrations, and rewards for working here. What we give the company, I think they definitely

such high levels of commitment? It helps if you have a boss like Herbert Kelleber - or Herb, as he is always known. Herh sets the tone for Southwest with his remorseless enthusiasm for jokes, pranks, laughter and

Herh traces tha spirit of Indeed, the atmosphere at Southwest Airlines back to the to that of a religious sect than a when it was a small, entrepre-husiness. Employees seem to be neurial outfit pitted against the in [avour of a mission to

might of the big US airlines. He says all organisations that have managed to bring off something spectacular have had an usagainst-them mentality. "I guess another way to put it is that to bring out your best efforts, you need to have an enemy."

From the start, Southwest used wackiness to attract attention to itself. Catering for a predominantly male, Texan clientele, it launched itself with a "love" theme under the slogan "Somebody else up there loves you." Its air hostesses wore hot pants and white PVC go-go boots; drinks were Love Potions, peanuts were Love Bites, and tickets came from Love Machines.

Today, Southwest's stockmarket ticker le still LUV. But adjusting to a more politically correct era, the company

deliver "positively outrageous service" at unbelievably low

Oddly, Southwest believes the best way of achieving this objective is to ssy that customers come second. The company's top priority is treating its own employees well, out of a firm belief that if its people are happy, everything else will fall into

cal jokes: it's the recognition, it's mitment to service. The company treating people right on a daily can afford to be selective because basis," says Gary Kelly, chief financial officer. "Every company I have ever gone in, they say people are number one, but they're just not. They don't live up to that, and we do."

A lot of the feelgood effect is achieved through simple gestures. Even though Southwest has grown to 23,700 employees, be says. "The bad news is everyone gets a hirthday card you will work your ass off."

from Herb and Colleen Barrett, the company's second highest-ranking executive. There are cards, too, when people get mar-ried or have babies, and promo-tions are marked with a bottle of

champagne.

Effort is recognised through countless awards and celebrations, ranging from formal employee of the year awards to daily acts of recognition for good service. Informal rewards include gifts of candy or ice-cream, an hour off work, an impromptu party, or - very highly valued in the US - a parking space close to the office.

At another level, Southwest has long believed in trusting employees to exercise their own judgment rather than tying them down with rules. "People are very, very gifted," Herb says. They can do a whole lot of things. And if you give them the opportunity to expand beyond the horizons that the organisa-tion tries to define for them, you will be amazed at what they can

erb says fun has never been a deliberate policy at Southwest: rather, it comes from an atmosphere in which employees are encouraged to think for themselves, and are liberated with respect to their emotions. It is not all laughter, either: there is crying, too. Colleen Barrett says: You couldn't exist in this environment if you never wanted peo-

ple to give you a img."

Such sentimentality may sound too cloying for some tastes, and Herb acknowledges it is not for every.employer. "I think in some cases, companies feel that the burden is too heavy, dealing with every employee essentially as an

individual when you have many thousands of them."

So how does Southwest manage it? Much of the credit is due to Colleen Barrett, officially corporate secretary but known internally as the keeper of the compa-ny's culture. She has created a culture committee to perpetuate the Southwest spirit, made up of more than 100 employees from all parts of the company.

They meet in their own time to exchange ideas, and they convey the company's philosophy and values to their co-workers, often, far removed from head office. Another key element in pres-

erving the culture is recruiting the right people. "We couldn't have the atmosphere that we have without having the people that function well in this kind of atmosphere." says Libby Sartain. vice-president for people. "So the whole recruitment process is designed to get at more than just the skills and background of the person to get at what their atti-

Southwest seeks out people who show an ability to work well with others, s positive attitude, a so many people want to work there: last year it received 124,000 applicants for 5,473 jobs.

But Herb says Southwest's image can be a problem if appli-cants think working for the airline will be just one long laugh. "We tell them the good news is that you will have a lot of fim." he says. "The bad news is that

#### **BUSINESS EDUCATION**

### Clean trade

Anita Roddick, founder of the Body Shop retail chain, is the moving force behind a master of science degree in responsibility and business practice to start in March.

The course, offered by Bath University in conjunction with Roddick's New Academy for Business, le a two-year part-time programme designed for managers from both commercial and non-profit organisa-

"Participants . . . will be able to contribute to moving their organisations towards a more valnes-aware orientation," says Judi Marshall of the School of Management at

The programme is designed for students from both the UK and overseas. It will be based on four five-day workshops each year, each focusing on one aspect of ethical management. In between, participants will practice the techniques in their work environment.

Business school staff have to perform for their money, says Della Bradshaw

# Remuneration remedy

under constant pressure to introduce at home the techniques they recommend to corporate clients. At the top of the list is performance-related pay.

The issue is a particularly thorny one for most business schools because their salary structure is closely tied to academic salaries in their university. Independent echools, auch as London Business School in the UK, have fewer problems in introducing innovative employment packages.

Faculty at the school are all on contract - none have tenure - and it has had performance-related pay since 1990. Feculty are individually assessed in five areas: teaching, research, good citizenship, external visibility and academic administra-

At the Indiana University School of Business in the US it took a personal crusade by dean John Rau, when he took up his position four years ago, to introduce performance-related pay. But it was not without the support of the 150 faculty. "When I individuals in each of the first got here I asked the fac-

ulty what were the principal issues facing all of them and they said the compensation scheme didn't remforce what we needed to do strategically," says Rau.

Now each academic has to please six constituencies in order to get a high personal ranking. But the scheme does not stop there.

The personal score is combined with scores from other

departmental score on which departmental salary increase is calculated.

The six constituencies are the directors of the undergraduate, postgraduate and doctorate programmes, the placement office, executive education department and the dean himself, who awards scores on the basis of attitude and personal development. The dean's score carries twice the weight of

The changes reflect the shift in emphasis at the achool, away from inwardlooking research to outwardlooking corporate work, acknowledges Rau, and away from exponents of a single skill to a more rounded academic. "I tell them that instead of being the best piccolo player they have to be the best orchestra

conductor." The plan also acknowledges the fact that different areas we want to develop."

academics have different strengths and creates a sense of diversity. "The good faculty are not all going to look the same," says Rau.

At Manchester Business School in the UK, dean John Arnold is treading a similar, though less ambitious, path. Arnold has developed a systematic way of rewarding academic staff based on the quantity and the quality of work in teaching, research and administration.

Each academic is given points and any that significantly over-perform on their target get a one-off bonus. When the scheme goes into full operation on August 1 next year, Arnold believes that between 2 per cent and 5 per cent of the salary pool will be allocated in this way.

Although some staff are suspicious, Arnold believes many will welcome the transparency. Initially the scheme will reflect the way that the school operates, but Arnold recognises, like Rau, that the echeme could be used to engineer the direc-tion of the school. "It becomes part of our longerterm strategic planning. We can award extra points in

### Drive for a mass TV audience

to see rugby union in the news for all the right reasons.

The appointment last week of a new England captain in Bath centre Philip de Glanville and the selection of a squad for the team's first international of the season allowed us to forget temporarily the ongoing and hloody battle between the Rugby Football Union and the top English clubs for control of the game.

The tough-minded but telegenic da Glanville is just the right sort of person to help steer rugby union through the first years of the professional era, while the new squad for the Italy fixture later this month suggests England is ready fully to embrace the attacking game employed so effectively by New Zealand and Australia.

However, it is at club level that rugby faces its biggest predicament, and I am not talking about the long search for a solution to the bitter dispute between the RFU and the English Professional Rugby Union Clubs

Despite recent setbacks, the owners and the administrators of the gama will almost certainly eventually settle their differences about how to share out the televiston money and operate the eague and cup competitions. At the very least, it cannot be long before Rupert Murdocb, the media mogul

hey call it the architects'

Booker prize. As Ger-

maine Greer rather

sourly remarked after

this year's Booker dinner. "It's

the publishers who decide which

The general public hardly gets a

Despite the incestuous quality

of the Stirling prize, named after

the late James Stirling (architect

of the Turner Wing at London's

whose millions are bankrolling the nawly professional sport, knocks heads together to force a resolution.

No, there is a more profound problem facing club rugby, and at its root lies surprise, surprise - television, Ask yourself this: Can club rugby lay the foundations for long-term prosperity as a professional spori if in its formative years it is broadcast to a minority audience on satellite television?

It is a predicament that. because of the large amounts of money flowing into the game from television, few have been willing to confront. BSkyB, the satellite broadcaster, has offered to pay £87.5m (\$142m) for English international and club rugby during the next five years. It is an enormous sum for a sport that until last year was almost antirely

Yet, in rushing to embrace BSkyB, club rugby has overlooked the fact that to develop a public following large enough to sustain its professional status over the long term it needs to display its wares in front of the widest possible talevision audience

This is aomething that BSkyB, for all of its undoubted production abilities and marketing skills, cannot yet deliver. Just assume for a moment

that club rugby was starting from scratch and money was not an issue. Which broadit would choose to sell itself to the nation? A terrestrial broadcaster which reaches 21m bomes in Britain, or a satellite broadcaster with

5.7m subscribers? Several years ago rugby chose the latter, negotiating a £4.5m three-year deal with BSkyB to show live games on Saturdays. At the time, the BBC and ITV could not or did not want to match that offer

Yet club rugby on Sky Sports has not proved a great success. Sky claims that Courage league club rugby games on Sky Sports drew an average audience of ahout 200,000 last season. That seems a reasonable enough total for an amateur sport that rarely attracts crowds much larger than 4.000 or 5.000 to its tiny and run-down stadiums.

However, now that club rugby is professional, and having to foot wage bills that reach £1m or more per squad, it will have to do much better than that. The game's optimists believe the improved,

higher-acoring version of rugby union that we have seen on the sports fields of England this season will help the sport build bigger audiences But club rugby, as a prod-

uct relatively new to television - until two years ago it had never been regularly broadcast live on television - needs to win over as many

fans as quickly as poss- base substantially, but club Now, if the BBC or ITV

was showing live club rugby. the sport would be able to draw on a much larger pool of potential viewers. At the moment, cluh rugby is watched on average by 3.5 per cent of Sky subscribers. If 3.5 per cent of the 21m households with terrestrial television were to time in. that would represent almost 735,000 viewers, more than three and half times what Sky currently delivers.

Moreover, club rugby on terrestrial television would draw even bigger audiences because games could be. shown on Sunday afternoons, when rugby fans are far more likely to be watching. Currently, Sky broad-casts club rugby on Satur-day afternoons, a time when sports fans are unlikely to be settling down in front of the television set. On Sunday afternoons -

the time alot that draws the big audiences - the satellite channel is devoted primarily to covering football. Yet a top club rugby game shown liva on BBC on a Sunday afternoon could conceivably draw an audience of 1m or more. I know I would happfly watch it, as would most of the long-suffering but loyal viewers of Rugby Spe-

Admittedly Sky, with the approaching arrival of digital television, might be able to build up its subscriber

rugby cannot afford to wait too long to establish itself in the nation's sporting

So, why did club rugby throw in its lot with Sky when the time came to negotiate a new contract? Well, there was the money of course. But in truth, it had little choice. Sky is stumping up millions for international rugby, the glamour game which draws the big audiences. Club rugby came with the package. The clubs could not have negotiated their own television deal because, as three years ago, no other broadcaster seemed willing

to buy the product. Yet, given club rugby's need to build a large audience, is it not possible for the sport's administrators to negotiate parallel televisioo deals with more than one broadcaster that would give club rugby access to a lot more than a quarter of Britain's homes? After all, football manages it quite happily with its separate Sky. BBC and ITV deals.

Perbaps when the RFU and EPRUC bave settled their differences and the dust has settled, they might think again. Otherwise, club rughy - a rapidly improving and exciting sporting spectacle judging by some of this season's best games - will spend the first five years of its life as a professional sport badly underselling

Tough-minded and telegenic: the new England captain Philip de Glanville

### Talented line-up for architecture's Booker

author will win, not the readers." The £20,000 Stirling prize for UK. The six shortlisted schemes this year are a promising indica-tion of rising design standards architecture is similarly awarded by the profession, through the Royal Institute of British Archiand the arrival of excellent, younger architects.
Richard Murpby has converted tects, to one of its own members.

small mews stable into a modern bouse in Edinburgh. It is a tiny project that contains within it the seeds of a talent that will do well on a larger scale. The Tate Gallery), the publication of mews house was originally huilt its shortlist allows a review of in 1820 and its character as a the state of architecture in the stable with large opening doors

and smaller rooms above has been respected. The architect has not done what is so often perpetrated in a mews where all the functional aspects of the buildings disappear as they are turned into rows of tiny cottages. Murpby has put a new building inside the old and they coexist perfectly. The clients for this surprisingly light and spacious house are the Danish consul and his wife.

The other outstanding building

on the shortlist is the indoor cricket school for the Marylebone Cricket Club in London. It has a remarkable amount of glass for a building devoted to a ball game, but it is a long time since I have seen such a light and elegant structure - evidence of David Morely's training under Sir Norman Foster. The arched roof has glazed barrel vaults with fabric louvres beneath, which give the place a wonderfully calm light.

At the University of Salford

Centenary Building for some 400 students of architecture, design, and graphic studies. Built around a tall, narrow internal street, the teaching and staff rooms are reached by galleries and bridges. Throughout the building muted colours give an air of distinction. It is the most distinguished new element on the campus. The educational sector has

gone on building throughout the recession. At Emmanuel College,

designed by Sir Michael Hopkins is described by the jury as a very big budget extension to the college, providing public rooms and space for performances. It is a solid limestone building with a fine timber roof over the main auditorium. Like all of Hopkins's work this is finely detailed, expensive and elegant with a quality of timelessne

The two other shortlisted schemes are also possible win- ture.

pers. The restoration and adaptation of the listed 1933 Boots factory in Nottingham by AMEC Design and Management is outstanding.

The new headquarters for Procter & Camble in Surrey is an excellent example of commercial architecture. The design hy Aukett Associates focuses on an inevitable atrium, but in a way beautifully related to the land-

The results of the Stirling prize contest will not be announced until November 21. It is to be hoped that it will encourage either a new, younger talent or a commercial practice raising the standards of everyday architec-

Last year, 30,000 visits were made to hospital patients and the housebound.

58,000 people were helped with pension advice and support. 2,996 people (over 700 of them disabled) were employed by us. 450 people were accommodated in our Residential Homes. These people, and thousands more like them, depend on your continuing support as desperately as we do. If you can help in any way, please call us on 0500 1100 11 quoting GA4.

#### **CONTRACTS & TENDERS**

Considering the decision of the HZ Management Board U-62-3-1/96 HZ-Hrvatske zeljeznice (the Croatian Railways) are announcing

#### THE PRE-QUALIFICATION

for providing the rolling stock cleaning services:

- 1. Cleaning of the coaches by using the free technological time in exploitation (ambulatory, faiotly, regularly, thoroughly).
- 2. Cleaning of the locomotive driver's cabin

The application has to contain:

- 1. Corporate name,
- Certificate from the Register of Corporates, Data about company and references about activities comprised in the tender,
- Organization and operationalization,
- 4. Scope of the offered activities,
- Quality of performance and equipment,
- Concern regarding equipment and furnishing,
- 8. Concern regarding the staff and their training. Concern regarding environmental protection.
- Price and mode of payment,
- 11. Presentation of th financial possibilities, 12. Credibility and modes of credit financing.

For details contact HZ - Hrvatske zeljeznice, Headquarters, Department for Development and Informatics (room 36, tel. +385-(0)-1-457-79-46; +385-(0)-1-18-34-40, Fax +385-(0)-1-18-33-96: +385-(0)-1-18-28-31), Mihanoviceva 12, 10000 Zagreb, Croatia.

The bidders can obtain the necessary documentation at the HZ Headquarters (Department for Development and Informatics) with preliminary payment in the amount of 1.080 kn (300 DM) on the giro account no. 30101-601-85044 at Privredna banka Zagreb or on the foreign currency account no. 30101-620-37-7000280-0182800-121474 (at the same bank). The documentation can be sent by mail with preliminary payment receipt.

The bidder should confirm his decision to join the preliminary qualification within 7 (seven) days from the announcement of this invitation.

The application and all the other correspondence between HZ and bidders should be in Croatian or English. Exceptionally the printed brochures enclosed to the application can be written in other language provided that Croatian or English translation of the relevant part of the text that is important for understanding the application is enclosed.

All applications should be sealed with visible sign: "DO NOT OPEN - PRELIMINARY QUALIFICATION FOR TAKING OVER THE CLEANING OF THE ROLLING STOCK". The applications should be sent to HZ - Hrvatske zeljeznice Zagreb, Mihanoviceva 12, 10000 Zagreb, Croatia, room no. 36.

Only the applications received by 12.00 noon on the December 12, 1996 will be taken in

The opening of the applications will take place on December 16, 1996, at 12.00 noon at the Headquarters of the HZ - Hrvatske zeljeznice in Zagreb, Mihanoviceva 12, room oo. 36. The results of the pre-qualifications will be send to bidders within 15 days.

Sunmin condem

When investment bankers and company chairmen start talking about "megamergers". investors should hold tightly to their wallets. That is the conclusion I draw from observing the

maturing of the BT-MCI merger. While most of the industry's commentators have predicted in Hollywood. that the acquisition by Britain's dominant phone company of America's second-largest long-distance carrier will provoke further concentration, there has been remarkably little hard analysis of the business logic.

Yet past waves of mergers have come and gone, lining the pock-ets of the sharebolders of acquired companies but leaving little in the way of synergies for the buyers. The last round of mergers comparable to the changes now afoot in telecoms was the move by Japan's consumer electronics companies into

Tim Jackson

### The trouble with telecom megamergers

the "software" of the entertainment business, Look where that ended up: both Matsushita and Sony were taken to the cleaners.

There ought to be two arguments for merging the operations of BT and MCI. One is that Concert, the new combined company, will have lower costs than the two companies would have had separately. The other is that it will have higher revenues.

Look first at the cost side. BT has claimed that the combined entity will save money with com-mon software development and shared purchasing starting at \$500m (£807m) a year, and lower capital expenditure totalling \$1.5bn over five years.

There is every reason to believe that two separate cost bases will grow separately for some time. Spaces have apparently been found in the combined

to exact favourable trading terms.

with; and the UK and US markets

from companies they do husiness

are already sufficiently different,

and the costs of changing legacy

systems sufficiently high, to

make it unlikely that the same

programs will run on computers on both sides of the Atlantic.

hierarchy for almost all the highest paid people in the two firms (the savings will come from the The co-chairmanship principle will require the company to

corde every month.

The risk is that the merger

might be on the Japanese hanking model, where the culture and bostilities of two separate organisations have persisted for years or even decades after they were supposedly merged.

What about revenues? The buzzword of the moment is "onestop shopping": the idea that giant multinationals prefer to have a single company managing their global networks instead of 27 different companies and 27 dif-ferent invoices. Unfortunately, this process is zero-sum - it does no more than redistribute sales from one company to another, and may have the effect of reduc-

mies will materialise. Both com-panies are already large enough board across the Atlantic by Con single facilities manager is required to deliver the global service for much less than the previons cost of fragmented dealing. There is a more important

> worry, too: most customers are not multinationals. The big growth in telecommunications sales is more likely to come from small and medium-sized businesses and for them a phone company that seems to be hungry and local is more attractive than one that is global and powerfol

The biggest opportunity of all is in the residential market, where telephones and the last mile of copper wire lie unused for 23% hours a day. You do not need to be a global grant to find ways

to utilise that capacity better.
Why should BT have been willing to pay twice its own PE ratio for MC? Two good reasons. One is that incumbents - and MCI is an incumbent, no matter what Sir Peter Bonfield may say about market entrants - have a big advantage in offering new services. The best example is AT&Te Internet business, which has picked up 500,000 customers in half a year without trying.

Although the European Union and everyone else are talking about market opening, the reality is thet nobody is likely to lose money betting against swift tele-coms deregulation outside the Angio-Saxon world.

Why else would BT be interested in allying itself with NTT,

which combines extremely high prices with overstaffing that would make an Indian railway blush? The other good reason for the deal is the hope that MCTe culture gives BT a useful kick up the backside. BT has improved a iot in the past 10 years. It is ahead of its European competitors - particularly the lumbering Mercury Communications in the UK, and the heavily geared monopolists of France and Ger-

But MCI, known by insiders as "More Change Imminent", is faster. Sir Peter Bonfield has already experienced the phenomenon of a smaller company energising a slower-moving parent. At ICL, acquired by Fujitsu, he presided over a period in which the British subsidiary effected a reverse takeover of the Japanese parent in managerial terms But the worry for BT's share-bolders, of whom I am still one, that the cultural transfer might be in the wrong direction. tim.jackson@pobox.com

## Computer, read my lips

Bill Gates tells Paul Taylor that machines will start to learn their users' needs

ix years ago when . Bill Gates, Microsoft's chairman and chief executive, used the phrase "information at your fingertips", the fastest modem communicatione devices were running at 9,600bps (bits per second). fax machines were sweeping the world and the computer industry was atill arguing about whether the Windows graphical user interface would catch on.

The fingertips concept, which boils down to making information easily available to personal computer users "anytime, anywhere", seemed a distant dream then. But as Gates notes, the rapid acceptance of Internet technologies inside and outside organisations has transformed the outlook.

"Companies want to empower their knowledge workers with information to make decisions," says Gates, who was visiting Britain last week to share his vision of the future with schoolchildren, politicians and business leaders. "It is the lifeblood of a company. Think of something like a bank - what else is it besides information? So

ultimate goal anybody having access to the information they want, when they want," That involves creating "hot-links" between multi-media documents and making navigation much easier. "The Internet has brought in some major elements sooner

says Gates. He points to the importance of the widespread to the users' previous behav-adoption by companies of iour. common Net technologies such as the TCP/IP networking protocol, along with the use of Net-style addresses (URLs) and Web page hotlinks to replace file lists.

that might be expected,"

"Navigation has to be a lot easier than it is today. Today we have such a variety of ways that we navigate. We navigate mail. We navigate file eystems. We navigate help systems. We navigate pages. And we navigate documents. All of those are fairly different right now, and we've got to bring those

Future versions of Microsoft's computer operating systems will integrate the traditional hierarchical shell (the front-end of an operating system) and browser. In top" initiative, which has

an ideal world Gates believes it should not matter to the PC user whether information is stored locally on e hard intranet or the wider Net. .

Gates says the next gener ation of software will incorporate filtering techniques which will help PC users sift through information, for example prioritising e-mail, and automatically adapting

He thinks computer systems should "understand how we work and learn in an implicit fashion". Instead of being an essentially fixed and isolated eystem, he thinks PC software should adapt to individual users' needs and requirements, learning automatically from the way people actually interact with a PC.

The concept of a PC that

learns has been talked about as "softer eoftware". "Software's great, because it'e easy to change, but it would be even better if there was dynamic change simply based on a usage profile, much like working with a human assistant," he says. Microsoft's "Active Deskaround the idea that com-puter systems should be proactive and not eimply respond to user requests. The world has always been split between push, where things come to your mail inbox, and pull, where you

"What we'd really like to have is you setting up a pro-file and having the system should be smart enough to automatically learn what information you want letest software driver, brought to you based on your use patterns." For network or share a screen example, if someona with somebody who is doing requests information about remots support. restaurants, the system should be smart enough to deliver information about

local restaurants which

have to go out and browse.

serve the type of food the user prefers. Getes believes smarter software, combined with a new type of Windows-based hardware device dubbed the "NetPC", will help address the issue of the total cost of ownership. That has been seized npon by Microsoft's arch-rivals, Sun Microsystems and Oracle, as justifica-

tion for so-called "thin-cli-

ents" or network computers

been developed during the devices which would rely past 12 months, is built much more heavily on net-around the idea that comful centralised servers.

"Companies want zero-cost edministration," acknowledges Gates. Microsoft's solution is to team up with Intel, the chip maker, to deliver a "self-bealing" hardware/software package. That means that if there is a problem with a machine, it retrieve an update across the

However, Gates believes the biggest missing element in the drive for simpler, more powerful computing is the lack of a more natural interface - and speech recognition in particular. For this reason he says much of Microsoft's \$2bn (£1.2bn) annual research budget is being spent on attempts to develop such systems.

"I'm personally quite optimistic that, certainly within the next decade, we will have that kind of natural interaction," he says, Perhaps then, instead of fingertips, we should focus on lips.

### Jukebox Web sites may play death march for megastores

Victoria Griffith finds the record industry in a state of flux

get an inkling of the vast changes in store for the music business hy tuning into the launch of an experimental Microsoft page called Rifff (sic) on November 15:

(6)4(1)4(1)

The channel will feature jazz star Herbie Hancock in one of the first truly interactive music experiences. Hancock has made a recording listeners can manipulate. By clicking on different areas of a visual display, surfers can get the music to switch gears. Sometimes the piece will offer different Hancock improvisations of the same tune; other times a computer programme will take over providing pre-programmed harmonisations.

"Music may never be the same again, and certainly the music business won't," says Ty Roberts, chief executive officer of Ion, a music technology company.

Cybersurfers have seen change afoot in the recording industry for some time. At "jukebox" Web sites, listeners can download snippets of music they may be interested in buying. Artists chat with fans and even perform concerts over the Net. Pop atar Eric Johnson offered a guitar lesson over the Net. In late September David Bowie released the

ybersurfers may single Telling Lies exclusively over the Net in the US, and visitors to his site can now download three different versions of the sons. Record companies predict that by the end of next year, enhanced CDs" - audio CDs with special interactive video - will be available in music stores.

Some compare the transformation with the impact MTV had on rock and roll in the 1980s. "Video killed the radio star," says Albhy Galu-ten, vice president of interactive programming at MCA, quoting a popular song. Madonna may not bave made it hig without music video; on MTV, she thrived. Others didn't do as well." Cyberspace will be exploited by some artists more effectively than others. Ironically, the improvisations of jazz, ill suited to video. appear well adapted to the

multi-faceted Net. The interactivity of cyberspace seems likely to alter the relationship between fans and artists. "Right now. there's this big cushion between the two, made up of record companies and record stores," says Jon Diamond, vice chairman of N2K Inc, a group that runs innovative music Web sites. "That will fade away."

artists much swifter feedback. By the "hits" on the various versions of Telling Lies, for instance Bowle may be able to draw conclusions about the most popular recording of the song. 'In the future, we'll use that sort of information to decide what should be released in the stores," says Elizabeth Heller, senior vice president of new media for Capitol

"I'm not saving record stores will disappear overnight, but the era of the megastore is over," says Diamond, "Once the quality and speed issues are taken care of music buyers will be very keen on the convenience of buying CDs over the Net."

be technical challenges are considerable. Audio takes too long to download - often five minutes or more for a 15-second excerpt - and the quality is poor. Piracy concerns are acute and unlicensed recordings may well be a problem.

Yet within the next few years, people in the industry insist, many of these concerns will be addressed. Greater bandwidth and personal computer capacity will a new medium to work with. soon enable fans to download music albums within Fans are already giving minntes. Cerberius, a UK-

based Web site, has come up with pay-per-play at 50 pence for each piece heard on the

Diamond foresees a more creative music market, with alternative bands able to sell their recordings directly to

Others question how buyers will find their way through the maze of record ings. The answer may be Web sites that yet music for fans. Another source of tips may be the artists tham selves. Some of N2K's most popular Web sites list the five favourite albums of stars David Bowie and the artist once known as Prince.

Another solution would be for the computer to classify music lovers' tastes, placing them in a music "club" of like-minded fans who could pursus each other's recommendations. The Net company Firefly, for instance already provides such a ser-

Few in the record industry doubt that the business is in metamorphosis. Record com panies may not die out, but will take on a new role. Fans will have more say in the final product, and recording artists themselves will have As Bob Dylan would say or rather, sing: "The times, they are a changin'."

DAMASCUS

all these innovations to make life easier for air travellers, all these potential computer crashes. Can you imagine the chaos when the antomatic check-in computer goes down and airlines have long since got rid of their counter staff? Or when a satellite malfunctions and ground control no longer have enough people to cope? .

Last week's vision of the future was provided by British Airways, whose state-ofthe art laser luggage scanner broke down, leading to thousands of passengers flying from Heathrow sirport without their suitcases.

lation. For instance, our proposals on slot allocations The more advanced techat airports [which are expecnology becomes in the airline industry, the worse ted within the next month) will contain something on things seem to get. It is not just that the machines occasionally break down; it is advance of technology.

Group, a coalition of travel organisations, says that delays at European airports have grown this year and will increase further in 1997.

0345 320100

In the first six months of 1996, shout 14 per cent of all flights in Europe were delayed. This compares with 9 per cent in the same period last year. In the 12 months to June 1996, 14 per cent of flights were delayed. compared with 10 per cent in the previous 12 months.

The main reason for the delay was the growth in air traffic, but industrial relations problems played a part. One qualified success has been the new Europewide Central Flow Management Unit, set up to improve flight coimprove ordination.

While the unit has not been able to stop the number of delays from rising, it has been able to distribute them more evenly. More people are delayed, but they are delayed for a little less time. The average delay in the first six months of 1996 was 16 minutes. Last year it.

WATER LAND

Amon Cohen on moves to introduce more transparency into deals between partner airlines Cracking the code

travellers confused by the black airline art of code-sharing. Following two parallel invesgers against misleading tigations, Europe's airlines will have to be much more transparent about precisely who operates flights shared by two carriers. Code-sharing is a process

whereby one airline quotes a flight number for a service operated by a partner car-rier, which also quotes its own flight number. Depending on which airline they call for their ticket, unwary engers may think they are travelling with carrier A when in fact it is codesharing carrier B that is actually operating the Confusion arises most

often on journeys involving two flights, where passengers sometimes do not realise that the second leg of the trip involves switching to a (sometimes inferior) partner

In some cases, says Mike do look but a lot of agents Platt, director of commercial don't. Any attempt to clarify affairs for business travel agency Hogg Robinson, passengers have thought they were travelling direct to a destination only to find themselves routed via an airport some way off the most

direct route. The European Civil Aviation Conference, the Parishased collective body for Europe's national civil aviation authorities, has now acted to safeguard passen- and Brussels which are code-

information. It has adopted a list of recommendations, the principle one being that carriers should make passengers fully aware before they book of the existence of a code-share. This should include naming the operator of each segment of a journey. The group also wants code-share information to be printed on air tickets. Other parts of the travel

industry have also been instructed to improve clarity. Travel agents glean their flight data from computer reservations system displays and these in particular need to be made far more comprehensible. "Code-share information on [computerised systems] is like the small print on contracts: you literally have to look that hard to find it," says Mike Platt. We make sure that our staff information is welcome - we want to get it out of fine print and into block capitals."

Jorn Eriksen, commercial senior vice-president for Danish carrier Maersk Air, says his airline is considering making its code-share arrangements more obvious in its timetables. Maersk operates flights from Billund in Denmark to Amsterdam

shared with KLM and Sabena respectively.

But the recommendations he particularly welcomes are on establishing which airline is responsible for problems such as complaints, missed connections and mislaid baggage, or even more seriously, for dealing with the aftermath of a crash. "The legal aspects are unclear and I think they must be clarified," says Mr Eriksen. One British airline is scep-

idea full-hearted support, it does require considerable displays," says one executive says.

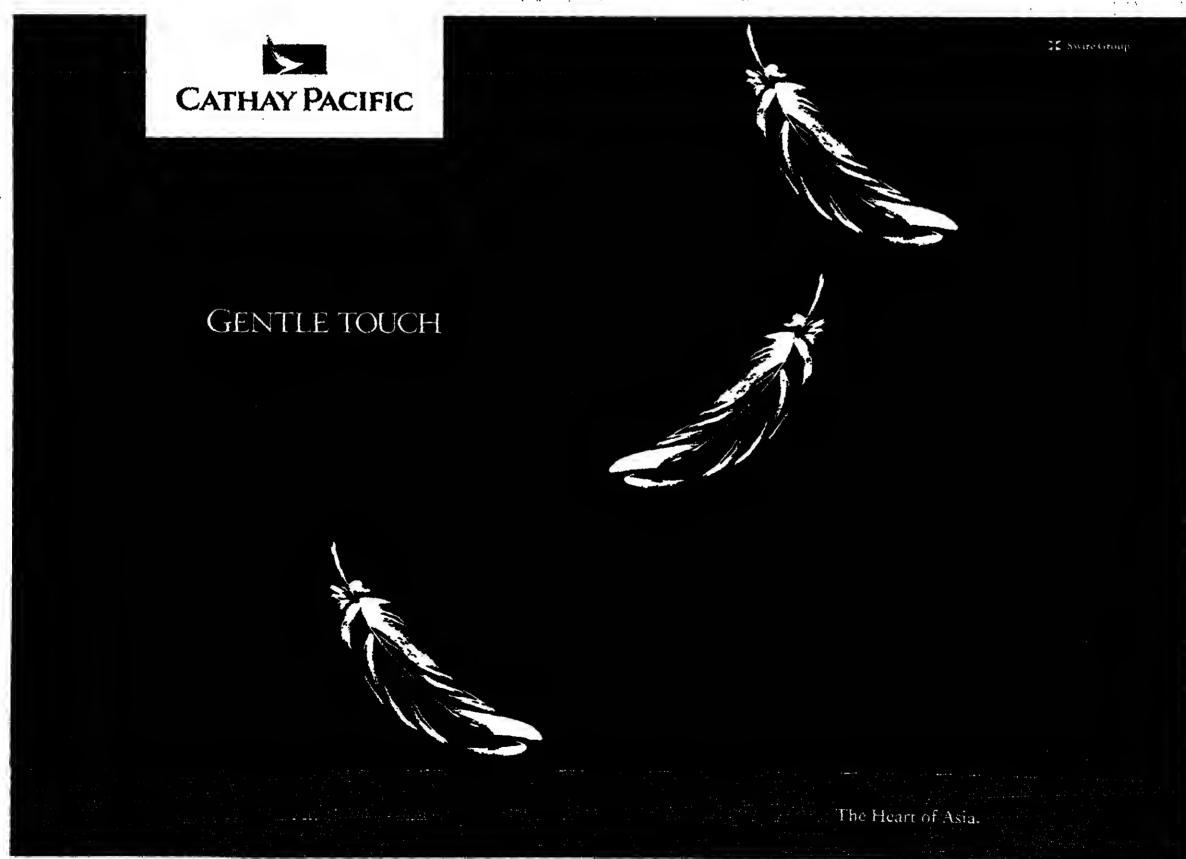

the consultancy Stratagem Amsterdam, arrived at very

tical about whether the recommendations really will change computer reservation systems' displays, which are hlamed for most of the muddiness over code-sharing. "While everyone gives the

where the transport directorate of the European Commission spent the summer con-templating a report it had commissioned on code-The report, prepared by

> similar conclusions about misrepresentation to consumers. However, instead of drafting legislation, the Commission is relying on group's recommendations to improve transparency of code-share arrangements.

It is an odd thought, but it says Ludolf van Hasselt, air would appear that the future also because the growth in was 17 minutes. policy division principal offi-cer. "We don't want to interof code-sharing by airlines in the number of travellers Europe depends on whether and flights outstrips the sums of money to change fere with that process," be Brussels is able to recruit The Air Transport Action more staff. Saleroom/Antony Thorncroft

### Silver that survived

vived

his is the week when the richest collectors of art and antiques in the world gather in New York to indulge in ostentatious consumption. Whether bidding in person or through dealers from among the packed, black-tied throng at the evening auctions at Sotheby's or Christie's, or, more usually now, by telephone from one of the discreet boxes above the saleroom scrum, they turn the mundane buying and selling of works of art into a social

But while most eyes will be focused on the multi-million dollar paintings on offer to catch the breeze of a strengthening demand - including a Monet waterlilies and a Degas pastel at Sotheby's, and garden scenes by Van Gogh and Monet at Chris-tie's - the highest price of the veek, upwards of \$8m, could well

be paid for 428 ounces of silver. The Parisian silversmith, Thomas Germain, made an elaborate tureen decorated with boars' heads, vegetables, shellfish and game, around 1733 for the Comte de Toulouse, a legitimised son of King Louis XIV.

According to Sotheby's silver expert, Kevin Tierney, "it is head and shoulders above any other item of silver that is likely to come on to the market." Not only is Germain regarded as the greatest silversmith of the century, and the creator of the rococo style, but very little silver

downfall - never chilling.

Even before the French Revolution melted down the silver and the gold of the aristocracy for ready money (and in an attempt to destroy the symbols of the ancien-régime), the Bourbon kings, notably Louis XIV and XV, had periodically called on the

made in his workshop has sur-

nobles to convert their silver and gold into livres to pay for their wars: By co-incidence the pair to this tureen survives - it is in the Detroit Art Institute - but apart from scattered pieces, usually of later date, commissioned from Parisian silversmiths by the royal families of Russia, Portugal and elsewhere, these creations of the greatest craftsmen have vanished. The tureens probably survived because the Revolutionary government was in awe of their

or Tierney, "this tureen is the finest piece of silver to have come up to sale in my 30-year . If it reaches its estimate it will become the most expensive item of silver ever sold at auction. Ornate objects in silver were once among the most prized of antiques. The last time a comparable item of French silver was sold in the saleroom, in 1960, the Berkeley Castle dinner service made in Paris by Jacques Roettiers at around the time of the

Since then paintings heve become the rich collectors' passion, with e Van Gogh portrait of his doctor selling for \$82.5m (£49m) in 1990. This is partly because no silver artifact of the very highest quality has come up for sale. Tierney, in the ritualistic phrase, is "cautiously optimistic" that the tureen will sell. It is the kind of exceptional object which might attract very rich collectors

interest in silver. It should also appeal to the committed silver collectors like Mr Al-Tajir, who in the 1980s became the biggest buyer of ornate silver in the world. But this is also an object that could interest e museum, and the Met-ropolitan in New York, which made an offer for the tureen in the 1950s, would like to own it, funding permitting

who have previously shown no

The tureen is being sold by George Ortiz who inherited it from his mother. She had bought it in 1952 from the Duc de Nemours, a descendant of Louis-Phillipe, King of the French, who acquired the tureen after the Revolution. Ortiz, whose money comes from Bolivian tin, is best known as a collector of tribal art and antiquities, two of the more controversial, but rapidly appreciating, sectors of the art market. was shown in Hong Kong, then allowed to be released in China. to usi" Also, says Yim, the Hong Kong For the first time a billion Chiaudience has become better-edunese people could see a woman cated. "And there is a new generation of film-makers, more conscious of trends in other parts of For years until recently, I say,

their artistic wings. In only seven months, those wings may be clipped again by Beijing. "Most Hong Kong people are very uneasy. This anxiety is not something out of a movie. It's real. We shall be living it for the rest of our lives and our children's lives. "The Chinese government say

they will issue passports, allowing travel. But will they go on issuing them if people leave and don't come back? Hong Kong people love to travel. Will someone one day say, 'Sorry, you cannot go? Then we will have to get passports in the traditional Chinese way: approval from your work unit then from the provincial government, then from Beijing. There are unimaginable

ers to feel tempted to spread rent rulers. There is resentment against the British and the way they have behaved. On the one hand they try to be friendly and helpful and to shame mainland China by saying 'We' are so human and democratic, we make life easier.' Of course China does nothing to make life easy. In practical terms, though, Britain does nothing. It has simply

walked away." What of Yim and his fellow film-makers - will they, more legitimately, walk away before next year's midsummer curfew? Or will they, in the oriental tradition, wait and see?

Yim pauses for what seems a minute before deciding on the most discreet reply. "I don't know - but it is always good to have a 'fire escape."

#### n a recent interview, Tim Theatre wanted to get away from "ranting and raving" in his new RSC Macbeth. This he certainly achieves. His production is a model of restraint; seldom will but not you find a Macbeth that tells the chilling and chilly, but - and this is its

low-key and unusually sedentary of the play with a bleak, mono-Macbeth. Stocky and reserved, he cbrome set by Stewart Laing. No builds up an unostentatious power of his own. His soliloquies, period details here; actors run up often delivered sitting on a and down a grey ramp at the front of the stage, or perch ou bench, draw you into his decision black battlements, while the Macmaking, emphasising how an ordinary man can find himself in This has its drawbacks - chez the grip of uncontrollable desires. This is a thoughtful, fresh read-Macbeth reminds you of a prefab and when graced with tables and ing, but it sacrifices excitement. chairs for the banquet, looks You never feel anything for this man - which makes his downfall e hollow experience. Brid Bren-- but it does focus the action; and Mimi Jordan Sherin's stark nan as Lady Macbeth is Allam's counterpoint; where he is sturdy, lighting emphasises the way she is thin, fragile and driven. confused for Macbeth. In keeping Her early soliloquies, tremulous with adrenalin, are good; her feverish madness however is credible but not piteous. leap about casting spells in dry

But the production's greatest flaw in my book is to fluff the slaughter of Macduff's family and

the report of it to Macduff. This is a scene that is pivotal to all the talk of children, barrenness and issue in the play ("He has no children." says Macduff, bitterly). The savagery of the slaughter should make you blanch; Macduff's reaction to the news should bring tears to your eyes. Here you remain unmoved. There is no sense of just how barbaric Macbeth has become, no involvement in the determination to stop him. And the plotting between Macduff (a curiously undignified Colum Convey, whose wild body language seems to be making up for everybody else in the play) and Malcolm (a stony faced Sebastian Harcombe) is bizarrely tedious.

The production will be remembered, however, for its great porter. Adrian Schiller, extravagantly drunk, has a wonderful line in slapstick. When, leading his guests in, he quite suddenly disappears down a hole, the audience roars with laughter. A welcome chance to engage emotionally with this austere production.

Sarah Hemming Macbeth continues at the Barbican. London EC2 (0171-638 8891).

## Republican agenda

Having embraced conservative polices, Bill Clinton now has little choice but to implement them

It may seem as though tha personal victory. The districonservative "revolution" bution of seats - now 55 to launched by Mr Newt Ging-45 in their favour – will give rich, Speaker of the House, Mr Trent Lott of Missisin 1994 is dead. Mr Bill Clinsippi, the majority leader, ton won 31 states to Mr Bob scope to block almost any Dole's 19, including such presidential initiative he Republican strongholds as dislikes. The Senate will Florida and New Hampalso be a more conservative shire. In Congress many body than before because of Republicans survived the the resignation of moderelection only because they ates. The incoming senators publicly distanced theminclude several of Mr Gingselves from Mr Gingrich. rich's revolutionary troops such as Mr Sam Brownback The chatter in Washington now is of hipartisan cooperof Kansas and Mr Tim ation. Mr Clinton, verbally Hutchinson of Arkansas. as adroit as ever. is talking Other highly conservative blithely of governing from new entrants include Mr the "vital centre" of US poli-Chuck Hagel of Nehraska and Mr Jeff Sessions of Ala-Words can be misleading.

Mr Clinton prevailed in the Mr Gingrich admittedly presidential election only lost some ground in the House. But given the vigour because be co-opted much of of the campaign against him (including \$35m in negative the Republican agenda. Unless I am mistaken, balancing the hudget, ending TV ads financed hy organwelfare as a federal entitleised labour), the Democrat gains were modest. Republi-cans lost about 10 seats, ment and extending the use of the death penalty are conservative, not centrist, only a fraction of the 62 they won in the 1992 and policies. Mr Clinton's vital 1994 elections. If history is centre ls what, until recently, many Democrats any guide they will gain would have dubbed consermore seats in the mid-term vative extremism. elections of 1998, since vot-Mr Clinton would have ers usually react against the party holding the presi-

convincingly repudiated the Gingrich programme only if be bad run on a genuinely Democratic platform and had regained control of at least one, preferably both. houses of Congress. As it is he has been unable to undo the damage of 1994 when, in response to the leftwing tilt of his first two years, Republicans won not just the Senate but a majority in the House of Representatives for the first time in 40 years. Last week voters endorsed this status quo: they put Mr Clinton back in the White House, but only on condition that he be constrained by Congress's conservative agenda.

The congressional results were disappointing for Democrats. In the Senate, Republicans increased their majority - quite an achieve ment given Mr Clinton's

But surely the scale of Mr that many voters held their Clinton's personal victory gives him great leverage to shape the policy agenda in his second term? Not really, because the victory was not that great given the propitious circumstances which included a cyclical economic upswing, a lack of foreign crises and an inarticulate opponent. Mr Clinton is the first president since Woodrow Wilson to be elected twice with less than 50 per cent of the popular vote. He beat Mr Dole by a margin of only 8 points about half what the polls predicted.

He would not have won at all but for his big lead among women voters. And he would not have prevailed if the US electorate ethnically resembled either Europe or Asia, Among whites and Asians. Mr Dole won hy margins of 46 per cent to 44 per cent and 49 per cent to 41 per cent respectively. Mr Clinton's victory reflected overwhelming support among Hispanics and blacks who voted Democrat by margins of 70 per cent to 22 per cent and 84 per cent to 12 per

> cent Exit polls also indicate

### Time ripe to give 'value' priority again in investment strategies

From Mr Kevin Barker. Sir, There has been a large number of articles written on "value investing" over the past few months, with the latest by Barry Riley on November 6 ("Growth investors who came in from the cold"). All tha articles, which have been supported by extensive academic studies, have agreed on two points. First, in Mr Riley's words "value-based stock

form growth styles in the

long run". Second, "value" has been out of favour over the nast two years. As pension funds typically

have liabilities stretching out for 25 years and change managers on average every seven or eight years, surely the most logical conclusion would be that now is an excellent time for clients to appoint a value manager. selection strategies outper-

The limitations of growth investing have been pointed out by many, particularly in a mature market such as the

UK, where the number of genuine growth stocks in the market can be counted on two hands.

The key point Mr Riley has not addressed is that if growth does not work, what, apart from value, does?

Kevin Barker, head of UK equities Foreign & Colonial. Exchange House. Primrose Street, London EC2A 2NY.

### Confused support for Pakistan move

From Mr Daniel Moylan. Sir, Your leader on the presidential coup in Pakistan ("Throwing the rascals out", November 6) was bizarrely self-contradictory. You say that "if half the allegations levelled against Miss Bhutto's government are true, she richly deserved to he stripped of office". But you do not pause to ask tha crucial question (an important one for serious journalists. I would have thought) whether half, or even onetenth, of them are in fact true before rushing on to congratulate the president on his "courageons" step. You criticise him only for not acting earlier to appoint a "technocratic" government: the latter, you say,

date was for a limited period. Try re-reading the relevant parts of the leader with the Queen and Mr Major substi-

tuted for their Pakistani

would not be an affront to

democracy provided its man-

counterparts and see if you would like tha regime you so happily recommend for Pakistan.

You compound your confuston hy then hoping that all sides can co-operate to ensure that "stronger political institutions can produce a stronger democracy". One does not, however. strengthen democratic institotions hy dismissing an elected government that still commands a parliamentary majority, putting troops on the street and placing the prime minister under house arrest and incommunicado. All you achieve is to confirm to the rioters and the disseminators of allegations that their tactics will get results if they do not like the ontcome of democratic elections. You also confirm that it is not lack of strong political institutions but rather the presence of one overwhelmingly powerful one -the army - that is the bane

of Pakistani democracy. There is a case, not a very respectable one, for saying that in some third world countries at least, a benign military dictatorship is more suitable than democracy. Are you sure that is not the case you are unconsciously

making? We know how the Pakistani army can deal with members of the Bbutto family. If you cannot bring yourselves to call for the restora-tion of Miss Bhutto to the office she has been elected to, would you not think it a worthy cause for the FT now to campaign for ber release from an illegal "house arrest" and the restoration and guarantee of ber constitutional rights to personal liberty, political freedom and due process at law?

Daniel Moylan, Egan Associates. 7-11 Kensington High Street, London W8, UK

#### Ludicrous to trot out old jibe

From Lord Roll of Ipsden. Sir, I am glad that Robert Solomon (Letters, November 6) has suitably responded to Michael Prowse's extraordinary piece on Keynes "Spurning Keynes", November 41. Prowse's opposition to Keynes causes no surprise knowing his adoration of Mises, but the degree of prejudice and misrepresentation in this piece almost makes it unworthy of serious discus-

t will just mention one point. He trots out the old ibe about Keynes's "infamous" statement "in the long run we are all dead"; a statement generally thought to have been attributed to Keynes by Pigou. There is a reference to the human life span in the General Theory in the detailed discussion of the characteristics and differences between the short-term investor and the long-term investor - "he who most promotes the public Interest".

Among the constraints on long-term investment decisions Keynes mentions in passing "life is not long enough". To construe this into some kind of a slur on Keynes' concern for the future is simply ludicrous; all the more so when one recalls what he did for the finances of King's College and as chairman of the National Mutual Lue Insurance Company.

Eric Roll. 1 Finsbury Avenue. London EC2M 2PP. UK

### Perfume pollution in the air leaves smokers gasping

From Mr Keith Spinks. Sir. As a regular business traveller, both short-haul and long haul, and being a smoker, I am becoming annoyed at being the butt (excuse the pun) of the only visible passive pollutant

when flying. No one seems to bother with noise pollution, screaming kids, the constant skyphone user, the heavy snorer, the odour polluter, purveyors of powerful after shave and perfumes on the 7.30 morning flight to

London, or the aroma of the unidentifiable culinary offerings of some airlines. And, even worse lately, the technological polluter, laptops at 30,000 feet.

Give us smokers a break; increase the air supply and allow us some distractions from all the other in-flight passive pollutants.

Keith Spinks, Obere Bergstrasse 3, 6004 Lucerne,

Personal View • Leon Brittan

### New tactics for EU trade

The European Commission must be given clout as sole negotiator in trade talks

Europe's external trade policy has been perhaps the finest advertisement

for the pooling of national sovereignty since the European Community came into being. It has made Europe a powerful force for open martets across the world, giving t the lead in trade liberalisa. tion, securing access for European companies and preventing the worst excesses of predetory trading by our partners. It has converted the single European market into a vast negotiating lever to win global access for European exports and investment hy challenging our partners to be as open to us as we are to

Yet there is now a very real risk that these huge gains will be eroded unless Europe adapts its trade policy to keep up with develop-ments in the world economy

In the past, protectionism was characterised by masrive tariff walls to fend off foreign goods. The European Community's common commercial policy was designed to bring these tariffs down in step with her partners. The crowning achievement of this policy was the Uruguay Round, which cut industrial tariffs by more than a third. But hy then things were already changing.

The global economy is now driven more by growth in services such as transport, tourism and financial services and less by traditional manufacturing. While exports have grown overseas investment has grown even faster. Simple tariffs now seem much less important, not just because they have been cut so much, but also because the economy has shifted on to pastures where new, complex and equally pernicious harriers

If the world economy has moved on, Europe's ability

Sir Leon: the Treaty of Rome needs changing too

Europe's policy on trade, enshrined in Article 113 of the Treaty of Rome, was the perfect tool for the task of knocking down tariffs on manufactured goods. For anything more sophisticated such as removing barriers

to investment in emerging markets, clamping down on copyright piracy or negotiating worldwide liberalisation of shipping, hanking, accountancy or tourism - it is fast becoming obsolete. The European Commission, Europe's trade negotiator, is being asked to drive a Rolls-Royce with a Morris Minor engine.

That is why the Commisston is urging EU leaders at the intergovernmental conference to update Article 113 so that Europe can negotiate with one clear voice on services, investment and intellectual property, as well as on tariffs, export policy and commercial defence. The Commission would be the sole negotiator, making proposals for negotiating directives and consulting closely with national ministers, who would approve them - as well as the result of the negotiations and their implementation - hy qualified majority, as is the case with tariffs on goods.

This would not transfer new powers to Brussels. The treaty already allows these issues to be handled at European level, and the European Court of Justice has ruled that as trade develops, the to keep it open for tha bene- EU's capacity to negotiate

with It. Rather, it would define existing powers more sharply, making the Commission a nimbler negotiator that could be called to heel just as easily by govern-

ments as before. Change is long overdue. Alarm bells hegan ringing soon after the Uruguay Round. The European Court of Justice ruled that unless the Treaty of Rome was updated, the Commission and national governments would have to share responsibility over "new" trade areas, such as investment. services and intellectual

In practice, this means any member state is able to veto comprehensive trade negotiations. No one Issue can be Isolated from the rest; a veto on one becomes an effective veto on all. And tempting though it is to believe that we have seen the back of unwieldy trade "rounds". experience since the Uruguay Round - in financial services, basic telecommunications and maritime transport, for example - shows that single-issue negotiations do not yield results. Horse-trading works better the more horses there are to trade. If Europe wants to be effective we need a single negotiator and qualified majority voting.

If Europe is faced with a global negotiation covering traditional tariffs on goods as well as branching into new rules on investment and intellectual property, as 1 fit of its companies has not. trade policy must develop believe may happen by the trade policy

small national tail could be wagging the large European dog at every turn. Europe's interests, as well as her collective image in the world will suffer. This problem will worsen the more countries; that join the EU. It is hard to predict whether our trading partners will be more amused or frustrated. Moreover, as the balance has shifted so far in the EU in the direction of freer trade. any veto that is exercised is likely to be on behalf of an unreconstructed protectionist country.

In the Eurosceptical climate, governments are inclined to see an increase in efficiency as a shift of power towards Brussels, even when they are unanimous on the need for action. Last week the EU's powerful opposition to the Helms-Burton Act was held together only after lengthy efforts to provide a formula acceptable to Denmark. Such incidents could proliferate if the dividing line between national and European responsibility is not clarified.

believe that the Commission will use a refined trade instrument responsibly. Tomorrow in Brussels I will he launching a new "market access strategy" to improve Europe's access to world markets. This will regroup all the multilateral and hilateral tools at Europe's disposal and urge business executives to tell the Commission where the most persistent harriers hinder their

exports and investment. It will not change the Commission's powers. Instead, it will use a vast database to list market hurdles by sector and by country around the world, monitor legislation to open those markets and recommend the right action - whether a veto panel or a bilateral negotiation, fur example - if tbey remain closed. All 15 EU governments support it. But for the strategy to work fully, the Treaty of Rome ueeds changing too. No negotiator can do worthwhile deals with his hands tied behind his back.

Sir Leon Brittan is vicepresident of the Europeon Commission responsible for

### FINANCIAL TIMES

Number One Southwark Bridge, London SE1 9HL Tel: +44 171-873 3000 Telex: 922186 Fax: +44 171-407 5700 Monday November 11 1996

### Southerners' dash for Emu

For Italy, Spain and Portugal, entry into European Monetary Union (Emu) is a matter of deadly seriousness. It is equally serious for the markets, where investors have placed a substanieving their goal. Yet the French and the Germans have made clear that they are concerned at the prospect of the southern Europeans participating in the initial hard core.

14

Mr Jean Arthuis, the French finance minister, even warned last month against a hasty Italian reentry into the European exchange rate mechanism. What, then, are we to make of last week's declaration that Italy will apply to re-enter the ERM by the end of November? The Italian finance minister

Mr Vincenzo Visco has mooted a range for entry of between L1,000 and L1,050 to the D-Mark, which compares with just over 800 before the lira's ejection from the ERM in 1992. Since hitting its low in 1995 the lira has appreciated sufficiently for Italy to be able to make a credible claim to be meeting Mr Arthuis'. demand for a "durable, sustainable and equitable" rate.

But an equitable rate, which has implications for competitiveness, would be met only at the lower end of the range; and even there the French will no doubt drive a hard bargain.

Yet this is all small beer compared with the question of compliance with the convergence criteria of the Maastricht treaty. And while there may appear to be an air of unreality about the southern European aspiration towards early participation, the logic is anything but flawed. For a country like Italy, fiscal

barely attainable grail. To stabilise a ratio of debt to GDP of more than 120 per cent, it has to run large primary budget surpluses - the budget balance excluding interest - for as far as

the eye can see. Between 1992 and 1995 Italy ran a primary budget surplus each year, achieving the impressive feat of raising it from 1.4 per cent to 3.4 per cent of GDP. Yet real rates of interest were so far in excess of Italy's rate of growth that the Maastricht definition of debt still rose from 108

per cent to nearly 125 per cent. The attraction of participating in a German-dominated Emu is that it helps remove the interes rate burden from the back of Sisyphus. Each percentage point fall in the nominal interest on the debt delivers a reduction in borrowing of about 1 per cent in two years.

Since the start of the year the yield on Italy's benchmark bond has fallen by about 2% percentage points. This has a self-rein forcing effect on credibility. And paradoxically, the fact that France and other potential early entrants have used creative accounting to meet the Maastricht criteria strengthens the market's convictions, because it weakene the ability of the . French and Germans to delay access to the second-round entrants.

The behaviour of the southern Europeans and of the markets is thus entirely rational. The real question about the markets' punt on southern Europe is about the credibility and sustainability of an Emu built on so much fiscal fudge. But on this, at least, the markets are with Keynes. In the long run we

### Victorian value

extended in the last decade of the 19th century, Britain's real income per head was roughly equivalent to that of present-day Uruguay.

Yet in one respect the country. Muses was rich; in the vision which to go. established these splendid monuments to culture and scholarship, intended to be open to the nation's intellectual and artistic consciousness. Whatever may be thought of such lofty aspirations, they left a heritage which remains an important part of the nation's identity.

. One reason was the tradition of free access. It not only allowed anyone to visit muse-ums and galleries, but conferred a sense that the treasures in them belonged to everyone -

which, broadly, they do.

When the great museums of the sive squeeze on costs has forced Victorian era were built and many great museums to start charging for entry. Only five of the big institutions funded by the National Heritage Department's £213m grants have resisted the trend. The British Museum is likely to be the next

> A tradition of free access may have contributed to the defects of financial management exposed in a recent report on the musaum. But setting charges to pay for inefficiencies should not be the answer, and certainty not for British taxoay

This is a case in which the price mechanism will act perversely - to limit an activity which should only be encour aged. And if the Victorians could afford to build great museums for the people, surely a much richer nation can afford Since those days, a progres- to let them in.

### Hopes and fears

terrorist campaign, there is speculation in Northern Ireland about another ceaaefire. Mr Gerry Adams, the Sinn Fein president, has indicated that republicans might be ready to put aside their weapons for a second time in return for speedy entry into the multi-party talks on the future of the province.

Mr John Bruton, the Irish prime miniater, remarked last week that there was evidence of "serioue rethinking" in the senior ranks of the republican movement. At the same time, Mr Ronnie Flanagan, Northern Ireland's new chief constable, spoke of a "very significant" recent meeting of Sinn Fein/IRA commanders.

Mr Bruton'a officials havebeen in close contact with their counterparts in Mr John Major's Downing Street office to discuss the terms under which a ceasefire would secure Mr Adams a seat at the negotiating table. Sir Patrick Mayhew, the Northern Ireland secretary, has indicated that the British government is willing to clarify the mechanics of Sinn Féin's inclusion.

This flurry of activity should not give rise to unbridled optimism. The callous IRA bombings over the past few months in London, Manchester and Belfast were a reminder of the instinct for violence which pervades republicanism. The latest apparent change of heart presents as many dilemmas as mitment to purely peaceful opportunities.

hard to discern whether a resumption of the ceasefire represented a serious commitment that happened, Ulster's fears to the political process or might slowly begin again to merely a temporary manosuvre turn to hope.

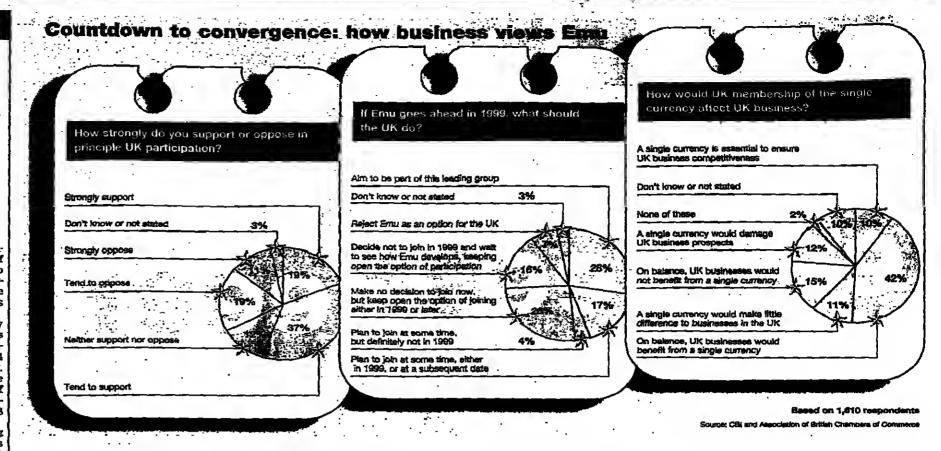

Nine months after tha to win tactical advantage. resumption of Sinn Féin/IRA'a Understandably, Northern terrorist campaign, there is Ireland'e unionist politicians have made it clear they are unwilling to take the intentions of Sinn Fein/IRA on trust.

dilemma. It is sensible for the London and Dublin governments to restate that all parties which renounce violence have a right to join the negotiations. After all, representatives of the so-called loyalist paramilitaries are already at the table. But there is a thin line dividing that response from one of negotia-tion with Sinn Féin/IRA about what it could gain from a new ceasefire. The latter approach would leave both governments open to the charge that they had succumbed to the blackmail

of violence. That said, it would serve the purpose of no-one in Northern Ireland, least of all the unionis majority, to dismiss out of hand the prospect of a renewed peace While any ceasefire would have to be convincing before Mr Adams could be allowed into talks, it could be counterproductive to set down a fixed period

of "decontamination". Inatead, Mr Major and Mr Bruton should make clear that tha onus would be on Sinn Féin, IRA to convince others that its renunciation of terrorism was genuine. All violence would have to stop. The republican leadership would have to embrace unequivocally the commeans enunciated in the six Most obviously, it would be principles set down by Mr George Mitchell, the indapendent chairman of the talks. If

#### **COMMENT & ANALYSIS**

### Two sides of the coin

#### Stefan Wagstyl and Peter Marsh on divisions among UK business leaders over membership of the European monetary union

managing director of the 600 Gronp, the machine-tool manufacturer, going into European economic and monetary union (Emo) would be "horrendons". For Sir Clive Thompson, chief executive of Rentokil Initial, the environmental services group, staying ont would be extremely naive"

The rhetoric which has long coloured the political debate over monetary union is starting to seep into the language of business executives. But as the 1989 deadline for the launch of the singla currency approaches, British executives - like British poli-ticians - are finding it difficult to reach consensus on the issue.

As Sir Colin Marshall, prestdent of the Confederation of British Industry and chairman of British Airways, says: "Business and industry are divided."

Tha clearest picture of corporate views on monetary union emerges today with the publication of an opinion poll of business executives by the CBI and the Association of British Chambers of Commerce. This shows support for UK membership of the single currency has grown since a similar survey last year.

But a clear division remains. with 58 per cent of those polled in Laird, an engineering group favour of joining the monetary union and 30 per cent against. The issues seems certain to dominate the agenda at the CBl'a annual conference which starts in Harrogate today.

As Sir Clive says: "With such divisions, the CBI is in a very

difficult position." Like the leaders of many other large UK multinationals, Sir Clive believes the economic case for joining Emu is strong. A common currancy will, he saya, reduce barriers to trade by cutting foreign exchange transaction costs and currency volatility.

Sir Clive rejects the view that the UK needs to keep its own currency so it can devalue if the economy runs into difficulties. We cannot avoid the issue of larly significant change for the improving our competitiveness. group - especially as oil is priced

or Mr Colin Gaskell. We need better products and in dollars. Mr John Jennings, more innovation, not a cheaper

currency."
He also dismisses euggestions that the UK will be surrendering sovereignty. "Outsida Emu. governments have already lost influence over exchange rates and interest rates and to some extent over taxation because of the globalisation of markets."

An equally passionate supporter of monetary union is Sir David Simon, chairman of British Petroleum. He supports the government's wait-and-see approach but thinks the country's future belongs in Emu. "We must go in for the sake of our children," says Sir David.

At Unilever, the Anglo-Dutch consumer products company. Mr Niall FitzGerald, chairman, is also convinced the UK must join - so long as the economic conditions are right. Monetary union must not be rushed, he said in a speech in London last month, for a bad Rmu could undermine the

European Union. But, if the conditions were right, the UK had to belong, said Mr FitzGerald, who chairs the CBI's Europe committee. "In essence the choice before Britain on Europe is a simple one. It is between being in or being out." Mr John Gardiner, chairman of marily supplying the car industry, thinks the political need to

be at the heart of Europe outweighs any economic concerns. "Twe spent two years trying to think of sensible arguments to support a single currency and I haven't found any. But I believe Britain would be well advised to get into it so the country can contribute to its future development. It's the least bad option." However, even among the largest multinational companies,

there are executives who are wor-

ried about a premature entry into the monetary union.
Royal Dutch/Shell, for example, operates in 120 countries and saya monetary union affecting just 15 would not be a particu-

chairman of Shell Transport and Trading, the British holding company, this summer was among business leaders who signed a let-

ter to the FT urging the British government to keep open its options and avoid isolation. But Mr Cor Herkströter, president of Royal Dutch, the Dutch holding company, has warned publicly that Emn should not be rushed. He said in a recent speech: "I would like to see considerable progress made towards overall socio-economic policy

path of monetary union." Mr Herkströter's caution is shared by a phalanx of UK manufacturing groups, led by some large engineering companies. Sir Christopher Lewinton, chairman of TI, Sir Colin Hope, chairman of T&N, Sir David Lees, chairman of GKN, and Mr Allen Yurko, chief executive of Siebe, all say they favour European business integration and are not against a single currency in the long term.

convergenca before wa embark

on the very risky and uncertain

owever they stress that the large dif-Europe'a big economies - factors such as inflation rates and labour practices - makes locking curimpractical and unwise.

The managers of Britain's privatised utilities mostly agree. "I think it would be premature to join a single currency," says Mr Norman Askew, chief executive of East Midlands Electricity. "We've had three good years of

low inflationary growth, but we have to earn a strong currency. Only in five or so years' time, if we can maintain our present growth and inflation, should we consider joining Emu."

For others, doubts about the conditions and timing of entry reflect concerns about the underlying merits of a single currency. Mr Dominic Cadbury, chairman of Cadbury, the confectionery group, says he is not necessarily opposed to UK membership in

the long run but he is against early entry. The risks can't be justified. You would be gambling by being in the first wave [of countries joining Emul."

Mr Cadbury says there are serious political objections to monetary union. "Where are the democratic controls over the proposed European central bank?" he asks. The loss of political control would be "unprecedented".

Mr David Sainsbury, chairman of J. Sainsbury, the supermarket chain, agrees: 'I consider myself pro-European but I have considerable doubts about a single currency. There must be a question over whether it will be right all the tima to have one single monetary policy for Europe."

The outright opponents of monetary union put forward similar arguments but with greater force. Mr Chris Miller, chief executive of Wassell, a UK industrial conglomerate, argues the UK needs to retain independent economic management. The country benefited from low labour costs, flexible working practices and the help given to exports by the pound's 1992 devaluation.

Mr Miller fears that if Britain entered a single currency, locking exchange rates would inevitably lead to harmonisation of than Mr Morgan Williams when other elements such as labour laws. "I'm not surprised that Gerrencies in the immediate future man companies want Britain in a single currency," ha says. "They'd like us to have their high wage and social costs, so that everyone's on the same playing field."

Mr Gaskell, of the 600 group. Britain's biggest machinetoolmaker, agrees: 'The potential disadvantages to a single currency are horrendous. Britain would be locking itself into an economic system whose future path no one understands. Once we were in there would be no

going back." But it is among businesses with little exposure to export markets that the moat entrenched opposition to UK membership of the monetary

union is to be found. Mr Robert Staples, chairman of

a family-owned paper and polyes ter converting business in Yorkshire, says: "Emu is an absolute no-no. The reason is quite simple. Once you hand over control of money to a third party you will never get it back. In this case we would give it to the Bundesbank. even if you call it the European bank, and it will be gone for

There are pro-Emu supporters among smaller companies, particularly exporters. Mr Hugh Morgan Williams, chairman of Canford Andio, a maker of professional andio equipment which exports 35 per cent of its sales, says staying out of the monetary union would damage the UK's position in the European single market. "It would be quite natural for those in the inner club to use sanctions

against those on the outside." Mr Morgan Williams says smaller companies will benefit in the same way as big groups from advantages of the single currency such as lower transaction costs. "We will gain from the first day of monetary union."

But such enthusiasm is unusual outside big company boardrooms. Mr Staples speaks for many more small companies he says: "People don't want it. It's not for this country.

With both major parties adopt ing a wait-and-see approach to monetary union, the CBI has so far taken tha same attitude rather than risk exacerbating the divisions among its members.

CBI officials acknowledge that they cannot procrastinate much longer - the UK must decide by the middla of next year to start preparations for entering the single currency or it will be too late to join in 1999. Sir Colin Marshall and his colleagues plan to start early next year trying to build a consensus among members.

But unless there is a dramatic shift in opinion, consensus will be difficult to achieve. There is little prospect that the government - whether Conservative or Labour - will hear a unanimous voice from business.

#### Dan, Dan money man

There's no such thing as a bad penny in Dan Pena's book Every single one can be used to help make you mega-rich in extra quick time, boasts the flamboyant former chairman of Great Western Resources, the

US based off and gas group.

Now he's banging the drum for his latest venture - \$5,000 seminars for people who want to make more money than you can spend in not one lifetime. but three!" The first is in Amsterdam at the end of this

\$10,000.

The dog's fare was regard but it took almost two years to resolve disputes over a series of loans and other payments -. including a \$1. im penthouse purchased by GWR to house

Pena's family while the company moved headquarters.

Last week GWR was talking to potential bidders about a takeover valuing the shares at about 18p each, an improvement on the 8p level they had reached when he left, although still a long way from earlier highs of more than 240p.
But GWR investors are not

likely to disagree with at least: one of the entrepreneur's boasts that after spending time in the company of Dan Pens you will look at money in a whole new light."

#### Ducking out

Intrepid watches of EuroDisney may fear the worst with news that the Paris theme park has postponed publication of its financial results, due later this month, by five days. But the company insists there is no funny business afoot, the postponement, it claims, is one not to some unexpected problem with the commany's accounts. but to another planned strike by French journalists in protest at

the proposed end to a 50-year-old tax break. EuroDisney's accommodating approach is not shared by the French government, which last month pressed ahead with a ... parliamentary debate on its controversial 1997 budget in spite of a near-total news

day of action. Ministers, of course, may have

believed ignorance was bliss as far as the French public was concerned. Conversely, does EuroDisney's determination to ensure its figures are fully reported mean investors might at long last prepare themselves for some better news?

#### Bve Bill

Bill Clinton's second-term economics team is unchanged at the top with Robert Rubin and Alan Greenspan unassailable at the treasury and the Fed. But . further down the totem pale of command the Family Leave Act, a much-touted first-term accomplishment, is being taken

literally.

Labor secretary Robert Reich signed off from the administration by writing in the New York Times that "you love your lob and you love your family and you desperately want more of both". But he's concluded it's impossible, so he's going back up to Boston, the four year commute over -

though whether back to Harvard or not he doesn't yet know. There may also have been some disappointment in the decision of Laura Tyson to quit as head of the president's national economic council, the White House policy

co-ordinating shop created by Clinton and first run by Rubin. She may have been a little fed up not to get the treasury, but her husband, a film screenwriter, had already gone

back to California. Top candidate for her job could be Larry Summers, now Rubin's number two and hankering after something bigger. But Sandy Berger. deputy to Tony Lake at the national security council, is also in the frame. Both have the advantage of being inveterate capital cave dwellers.

#### Silly fuel

British Petroleum already has its hands full coping with a public relations nightmare in Colombia; now it's facing a spot of bother with the locals in Belfast. Seems the electronic price displays in one busy service station have been Dashing up the names of the UDA and the UFF, the loyalist paramilitary organisations which traditionally use petrol for purposes other than motoring. An enraged Sinn Fein councillor has been moved to condemn the business as an example of "sectarian arrogance at its worst". BP, whose staff are having to come out several times a day to reprogramme the pumps, is more relexed; it blames daredevil children.

### Financial Times

#### 100 years ago

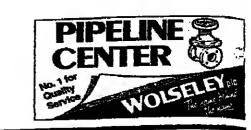

Railroads And Wheat The Omaha line of the North Western system is said to have hauled nearly 3,000 more cars of grain last month than in the corresponding month of any year. The Rock Island road is short of cars, and the Burlington, Missouri, Milwankee and Union Pacific lines also report a glut of grain in their systems, with which they have the utmost diffic ulty to cope. The enormous amount of grain on hand in the West was being rapidly pushed forward, to the immense gain of the railway companies and the farmers.

#### 50 years ago A Great Republican

I question the wisdom of assuming that a Republican Congress is disadvantageous to Britain. With a few notable exceptions the tribal chiefs of Britain-baiters in America Britain batters in the have belonged to the Democratic party while traditionally the Republicans have generally been friendly to Britain, Next to President Roosevelt our best friend in the United States before and during the war was that stalwart Republican Mr H.L. Stimson. Mr. Stimson is now near his 80th birthday and inspite of the burden of hia years ha was probably the most successful Secretary of War in the history of the United States. -

Fraud office to investigate at French request

### Banks face UK probe over Eurotunnel shares in Super

By William Lewis and Motoko Rich in London and David

The UK'e Serious Fraud Office is to investigate London-based banks and financial institutions over allegations that they were involved in a complex market manipulation of Eurotunnel shares.

In an unusual disclosure, the SFO yesterday announced the probe following a formal request last week from the

French police.
It would work "on behalf of the French authorities", but did not "have grounds to investigate market manipula-tion on a domestic level," it

Eurotunnel, the Anglo-French operator of the Chan-oel tunnel, said last night that it believed the inveetigation manipulation and possible insider dealing relating to Eurotunnel's £858m (\$1.4hn) rights issue in May 1994.

The Commission des Opérations de Bourse (COB), the insider trading allegations, the Paris hourse watchdog, which is now thought to focus

1994 after suspicions that underwriters had forced the share price down before the price was fixed, through short selling, in order to limit their underwriting risk.

In July 1995, the COB said it had found evidence of a sus-picious amount of "short selling" - the sale of chares which an investor does not actually own but hopes to buy back later at a lower price - and passed details to the French

fraud squad.
At that time, the COB also said it was investigating two banks involved in underwriting the rights issue. But in March the COB said it had decided not to pursue allegations of insider trading against Salomon Brothers and Swiss Bank Corporation, two of the 13 banks involved in the 1994 underwriting.

French financial detectives who have broader powers of investigation than the COB. are understood to have maintained their wider probe into

the company.

Philips, the Dnich electronics group, has settled out of court a \$3bn lawsuit brought by the founder of Super Club, a Belgium-based chain of home entertainment stores, which it rescued in the early 1990s.

The company said it had not admitted any blame in the Maurits de Prins. He alleged that he and other minority charcholders were deceived because of the "criminal manner" in which Philips took over Super Chib.

Philips declined to give details of the settlement but described as grossly exagger-ated reports in Belgium that it amounted to "some hillions" of Relgian francs.

Last December, it was obliged to confirm that Mr De Prins had filed a lawsuit three years earlier. That followed several injections of Philips' funds from 1990 into the lossmaking Super Clnb, which

had extensive US operations. These were sold to Blockbuster, market leader in video rental, after Philips took full control of the company in 1992. The 430 stores accounted for about three-quarters of the unit's annual revennes, which were then Fl 850m (\$503m).

Super Club shares, which once changed hands on the Brussels over-the-counter market for more than BFr5,000 Philips at just BFr150 cash in lts bid to buy ont the minori-ties. As an alternative, It offered a warrant on its own shares - at that time worth

The scrip offer put a price of about BFr3.7bn on the com-pany, which had slid into debt as a result of its US expansion. Its Swiss holding company was put into liquidation. Minority chareholders bad

been pressing for a purchase at nearer BFr2,000 a share, the level prevailing when Philips moved to 51 per cent control in early 1991.

Super Club remains active in the Belgian and Dutch markets, selling compact discs and computer games as well as

### THE LEX COLUMN French protection

Is French protectionism in an upswing? Certainly, the storm over handing Thomson Multimedia to Korea's Daewoo has an ugly xenophobic tinga. So did the carmakers' campaign to keep Valeo French. And British Airways' interest in buying French airlines has hardly been welcomed.

Of course, BA won Air Liberté in the end – even if it had to ally with a French group to do so. And not all the opposition to the Thomson deal is nationalistic; there is also perfectly rational concern that the Thomson twins may have been sold

too cheaply.
Nonetheless, instinctiva opposition to letting foreigners buy French industrial jewels is all too plain. This is not just national pride; it also reflects worries that foreign bids will mean aggressive cost-cutting. With unemployment at a record high and the popularity of Mr Alain Juppé, prime minister, at a record low, the temptation for the government to play to the gallery

must be great. This would be a pity, since the government has recently shown refreshing openness to foreign buy-ers of state assets. Not only is Framatome due to merge with GEC Alsthom; potential foreign buyers have even been sounded ont for Crédit Lyonnais. For French taxpayers' sake, let us hope the government is not too rattled by the Thomson experience to press on.

But it is not just taxpayers' interests at stake. The economy too needs more openness to change. True, French corporate culture is evolving: shareholders' interests count a bit more and some cross-shareholdings are being unwound. But there is far to go before a chairman's prestige really correlates to his company'e share price.

Moreover, talk of shareholder value does not necessarily mean managers will pursue the tougher consequences. Large-scale redundancies, for instance, in the face of high unemployment and a tradition of deference to politicians, would take real nerve.

Hence the need for some red-blooded foreign bids - or at least the threat of them - if only for the sake of French competitiveness. Many fret that the result would be the gradual disappearance of a strong French corporate sector. But to hope for world-class French companies in the absence of stronger incentives to perform is a dream; losers, however prestigious, have to be allowed to fail.

That said, many apparent obsta-cles are probably based on bluff which a brave foreign bidder could call. By cannily engaging the Rivaud group, for instance, BA got its way with Air Liberté. And if it really tried, an independent US group such as TRW could eurely have found a way to snap up Valeo. Foreigners are right to criticiee French protectionism, but they should be braver about putting its

#### Italian banks

efficacy to the test.

The Italian banking eystem is grinding towards crisis point, but at least the government has started doing something about it. Italy boasts 1,000 banks but no national leaders. Consolidation has so far taken the form of the government arm-twisting hlg hanks into mopping up corporate casualties so no excess capacity has been removed. The result is that Italy's largest banks offer the poorest returns on assets within Italy and among leading European economies. Something badly needs to be done. Non-performing loans are growing far faster than new loans,

and so are costs. The proposals put forward by Mr Carlo Azeglio Ciampi, treasury minister, would belp achieve two worthwhile goals: the genuine privatisation of the banking system, by forcing charitable foundations which control bundreds of banks to sell out; and a push for commercially-driven mergers and acquisitions. encouraged by tax breaks. The benefits would be manifold. The banking system should become more competitive, reducing costs, broadening its range of services and developing proper risk management systems; all of which would benefit Italian industry. Furthermore, the further,

foundations would receive trillions of lire which could be recycled into other stocks - boosting the government'e privatisation efforts although, of course, the cash to buy their banks stakes will have to come from other funds.

Sadly Mr Ciampi's proposals are also flawed. Under the time frame proposed, foundations will have 10 years to sell out. They will also have to sell only 51 per cent of their bank holdings, so they could retain effective control. Furthermore, the foundations will be accountable to nobody for the management and distribution of their new-found riches. That hardly bodes well for their efficient deployment. Mr Ciampi deserves much credit for putting the issue at the top of the political agenda, but it is unfortu-nate that he is not starting with a tougher line.

with To

#### BSkyB

"There is a Mr Cruickshank who takes a great interest in what BT or Sky do," Mr Rupert Murdoch told the Financial Times last week. The quote is telling. Mr Don Crulck-shank. Britain's director-general of telecommunications, is responsible for regulating BT. It is less well known that he will also oversee BSkyB, when the satellite broad-caster switches to digital technology next year. A draft paper is soon to be issued on how the market will be regulated.

The switch is important because it marks a step-up in the regulatory risk facing BSkyB. To date, its effective pay-television monopoly has been largely unregulated. True, the Office of Fair Trading has made operiodic investigations. But it has been operating under the UK's weak, general competition law and has had no special expertise in the field. By contrast, Mr Cruickshank's Office of Telecommunications will have a specific licence to police. If he is remotely as tough on BSkyB as he has been on BT, shareholders ehould be worried. Moreover, the shift of responsibility to Oftel may depoliticise the process. Politicians may have been reluctant to take too barsh a line on BSkyB because they fear the wrath of Mr Murdoch's

Even after the latest slide io BSkyB's shares, the stock is trading on around 25 times 1999 earnings. If investors start focusing on the risk that BSkyB's monopoly may be chipped away, the shares will fall

one of the industry's best management teams. It has cut costs in recent years and was the first company in the sector to huy back its shares in an effort to improve the return to shareholders. Analysts have valued the group at

would not edversely affect its regulated enterprise in the US. When East Midlands' shere price jumped last Wednesday, an emergency board meeting wes called in Richmond. A small team was sent to London to work with the group's UK edvisers, SBC Warburg and Wasserstein Perella.

### Dominion believes its bid has a

### YTL to pursue Computers making 'cool movies' \$500m float of power side

By James Kynge and Peter gnon in Kuala Lumpur

tbe Malayeian YTL. construction and power conglomerate, expects to raise \$500m from the flotation of its power interests early next year, according to Mr Francie Yeoh, managing

The flotation was first publicly proposed in connection with YTL's recent unsuccessful bid for the Hong Kong-based Consolidated Electric Power Asia, controlled by Mr Gordon Wu, but is to proceed regardless of the eventual bid.vic-

tory by Southern of the US. Mr Yeob said the listing would give his company access to the capital markets to fund power projects, wbereas rival Cepa would be unlisted after the takeover and its new parent, Southern, had significant

debt on its balance sheet. Mr Yeoh said YTL would retain a stake of about 60 per cent in its power interests, to be listed under the name YTL Power International. They would be floated free of debt and valued at a ratio of about 18 times prospective 1997 earnings from com-

Undertakings in the pipeline, including a large privatisation project in Zimbahwe and e proposed joint venture in China, would be "thrown in for free", Mr Yeoh said.

Proceeds, which are expec-

ted to include \$150m to \$200m from foreign investors, will be used to repay "non-recourse" debt accumulated by sxisting projects, and to expand ventures overseas. Non-recourse debt is lending where repayment is

dependent solely on the cashilow of a project. YTL Power International would expand the generating capacity of its proposed YTL-CPI joint venture in China from 250MW to 900MW, YTL is negotiating for a 60 per cent stake in the venture with e subsidiary of the Ministry of Electric Power.

Mr Yeoh said he was confident his bid to take a 51 per cent stake, for \$580m, in Zimhabwe's state-owned 920MW Hwange power plant would go ahead despite keen competition from international power companies. He added that Malaysia's prime minister. Dr Mahsthir Mohamad, had good rela-tions with Zimbabwe's president Robert Mugabe.

Commenting on the controversy over the price at which YTL sells electricity to Tenaga Nasional, Malaysla's power utility, Mr Yeoh said the tariff was not high compared with other projects in the region, such as the Paiton station in Indonesia. YTL was able to keep its costs down partly because of its access to local currency financing, which elimineted political and

filment of a 16-year-old ambiexchange-rate risk. tion to "use computers to make cool movies". On a broader level, 1998 will mark the effective start of a renewed challenge to of the animated features

market. While the market leader is also financing Pixar's second effort, the money for Ants is coming from DreamWorks SKG, which combines the talents of film director Mr. Steven Spielberg, film producer Mr Jeffrey Katzenberg and music mastermind

David Mr Geffen. DresmWorks. which recently acquired 40 per cent of PDI, is also spending heavily on conventional animation, and will confront Disney in this format in 1998 with The Prince of Egypt.

The challenge appears for-midable. As Mr Jobs points

### US tractor maker invests \$600m in product revamp

By Peter Marsh in London

Case of the US, one of the world's biggest tractor mak-ers, has started a \$600m programme to replace its main product families as part of its effort to expand sales by 50 per cent by early next

The scheme represents a more than twofold rise in Case's development spending hetween now and 2000, compared with the past five vears.

Mr Jean-Pierre Rosso, Case's chairman and chief executive, said in an interview in London that the move was "not a catch-up" as the company already had very strong products. "This is an acceleration in our product development, based around our plans for growth."

Case plans, over the next four years, to renew the designs of about 10 families of products, including tractors and combine harvesters. Based in Racine, Wiscon-

ein. Case is hiring several Case is the world's biggest hundred extra engineers and designers in its main technical centres and factories around the world.

These includs its main development centre near Chicago. Other design work is based in Casa's main European plants in Doncaster. England, and Crepy,

industry.

Earlier this month the announcement by Invesco. the UK fund management

#### FUND MANAGEMENT

group, that it had agreed to buy AIM Management Group of the US for \$1.6bn confirmed another trend in the fund management industry . increasing polarisation between large investment groups and niche companies. Invesco said it had agreed

to pay the privately owned Texas-based AIM \$1.1bn in shares and \$500m in cash and that the new group, to be known as Amvesco, will have more than \$150bn

under management. Over the past three years. the fund management business has been the subject of unprecedented merger activity, and the trend is expected to continue for the next few years. The deals are increasingly cross-border, creating international businesses out of what once were exclusively domestic operations. Goldman Sachs, the US investment bank, has pre-

While fund managers at dicted that within five years KBIM and Barclays Global there will be 20 to 25 companies with at least \$150bn in Investors can expect to be assets under management as well as numerous small companies which establish themselves as niche operators serving particular needs with specific products.

Several factors appear to be driving the globalisation and consolidation processes. For example, since 1990 the pace of growth in total assets under management has slowed, pushing some fund management companies towards seeking to acquire the assets of a competitor as the best way to grow. Goldman Sachs also argues that increasing competition between investment management companies to manage the world's pension fund assets is helping create a single market.

The process has been particularly pronounced in the UK, with a string of recent deals: For example, Commerzbank, Germany's third largest bank, bought UK fund manager Jupiter Tyn-dall in 1995 in a deal valued at £170m, and Paris based Indosuez's 75 per cent stake in Gartmore was bought in February by National Westminster Bank for £340m. In July Goldman Sachs bought CINMan, the pension fund manager for 500,000 current and former UK coal industry employees.

Last week Mr Simon Robertson, chairman of Kleinwort Benson group, binted that Dresdner is likely to play a further part in consolidating the industry, "Globalisation is a very important part of it," he said. "Size is also a key. There may be other moves once this restructuring has bedded down. You have got to be very small or very big, Goldman Sachs said, and I agree with that."

unchanged at DM32bn.

### Nine-month improvement at Viag

in Frankfurt

German conglomerate with interests in energy, packaging, chemicale and telecommunications, said operating profits "improved considerably" in the first nine months of 1996:

It gave no figures, but indicated that the rise for the full year would probably be above the 10 per cent already forecast. Pre-tax profits were unchanged in the January-September DM9, or 1.5 per cent, on Friperiod at DM1.82bn (\$1.2bn). marking a etrong recovery they are still below the lev- over the next five years.

from the first-half decline of els reached earlier in the 21 per cent to DM1.18bn. year - the 1996 bigh is was swollen by proceeds of the sale of its 43 per cent stake in the PWA paper company and reductions in other ebareboldings. Extraordi-

nary gains were DM570m.

for the full year should at least match the 1995 level. Analysts said the ninemonth performance was bet-ter than expected and the company's shares rose by day to close at DM587. But some DM4bn in telecoms

year - the 1996 high is Last year's pre-tax figure DM629 - having fallen after the withdrawal by the RWE utility concern from the telecoms alliance with Viag and British Telecommunications. Viag said it would push ahead with its plans with

acquisitions and disposals, however, there was a 2 per cent decline. Investments were little changed at Viag said its pre-tax result BT, especially in the mobile DML37bn, mainly in energy telephone sector. It said the and packaging. Viag recently two companies were the only announced the DMLShn pur-chase by its SKW Trostberg applicants for the E2 mobile telephone licence, Gerchemicals subsidiary of Masmany's fourth, dne to be issued next February. The ter Builders technology, a Swise building chemicals two partners will invest company, from Sandoz. Viag reported increased

The company said group tor through its Bayernwerk turnover in the nine months electricity and gas division turnover in the nine months electricity and gas division to September was of DM6.96bn egainst DM6.71bn. The packeging Adjusting for the effect of division showed a sales decline from DM9.09bn to DM8.74bn, partly as a result

of lower aluminium prices. The logistics division. including trade, transport and computer retailing, produced flat turnover of DM13.19bn. Steel trading was depressed by lower volume and prices, while Computer 2000 (the personal computer unit) was lifted by the acquisition of AmeriQuest, a US PC distributor.

### FMC seeks DM600m via preference issue

Fresenius Medical Care, the medical dialysis company, plans to issue 5m new non-voting preference shares this month in an offer expected to total about DM600m

The group, the world leader in renal care, would use the funds to strengthen its equity base, according to Dreedner Bank, whose investment banking arm Kleinwort Benson is leadmanaging the iseue with

CS First Boston. FMC, formed in September after Fresenius, the German medical group, acquired National Medical Care, the dialysis chain of W. R. Grace of the US, took on debts of about \$2.3bn from NMC. Fresenius holds 50.3 per cent of FMC, with the remainder m public hands.

preceded by a capital increase, follows FMC'e debut on the Frankfurt stock exchange and the listing of American depositary shares (ADSe) in New York last month.

Book-building, used to determine the interest of institutional investors in advance, will run from November 11-22. The issue price, to be announced on November 25, would be linked to the price of FMC'e common shares during bookbuilding, Mr Hansgeorg Hof-Dresdner Bank, said.

A green shoe, or over-allotment option, provides for the issue of a further 750,000

Based on Friday's closing price of FMC's common shares at DM136.10, analysts said the issue was likely to raise about DM600m.

The issue details came as Fresenius announced a provisional 41 per cent increa in net profits to DM86m in the first nine months of 1996 and forecast a "favourable development" in full-year results. The figures do not include the NMC merger.

Group turnover increased 24 per cent to DM2.04bn, boosted by new acquisitions. Pharmaceuticals sales rose 14 per cent and sales of dialysis systems, its core business, climbed 13 per cent, helped by foreign growth. The intensive care and mann, board member of medicines division increased sales by 10 per cent and turnover in the project planning unit more than doubled

from a year earlier. Pro-forma results at FMC showed a rise in net profits excluding risk provisions from \$40m to \$43m in the nine months. Including pro-

to \$2.3bn.

Analysts' reactions to the results were mixed. Mr Thomas Schiessle, at Delvisions, net profits totalled brück & Co in Frankfurt, and a pile of debt to tackle",

\$10m. Sales grew from \$2.1bn said the trend in FMC'e figures was difficult to interpret as the group "has only just been born and has enor mous goodwill write-downs

#### **Niugini** falls to **Battle** Mountain

By Nikki Tait

Battle Mountain Gold, the US-based mining group, seize control of the board and management at Niugini Mining, the Australia-based company whose main asset is a 17.5 per cent stake in the large Lihir gold project

in Papua New Guinea. Battle Mountain, which holds a 50.48 per cent interest in NML, said it was installing Mr Dennis O'Connell, its chief fluencial officer, as chairman of NML, replacing Mr Geoff London:

Mr Loudon will remain on the board, but this is being enlarged from seven directors to nine, with Mr Kari Elers, co-chief executive of Battle Mountain, becoming a permanent appointee. The other new member ie Mr Peter Lowing of Allen Arthur Robinson, a law firm in Port Moresby.

Meanwhile, Mr Ian Goudie, NML's chief executive, is being replaced by Mr Joseph Bayliss, a Battle Mountain executive. Mr Goudie and Mr Jeff Quartermaine, the former general manager for finance, had "ceased to be employees", said a statement.

The upheavals come in the wake of abortive negotiations between the two companies over a buy-out by Battle Mountain of the 49.5 per cent of Ningini it does not already own. Last month, Niugini independent directors refused to support Battle Mountain's offered terms which, they said, were pitched at less than A\$4 a

share and were inadequate. In a letter to shareholders, Mr Loudon said be believed Lihir - which was discovered by Nlugini - was being drastically undervalued" in the market. It could ultimately produce 1.5m ounces of gold a year, he suggested - more than double initial scheduled production of 600,000 ounces a year.

Since then, there bave been rumours that Battle Mountain wanted Ningini to shed its non-Lihir interests, which span Australia, Chile, Thailand and Greece but are relatively small.

### Colonial Mutual wins support

By Nikki Tait in Sydney

Colonisl Mutual, the Australia-based life assurance and banking group, said on Friday it was confisupport for its planned "demutualisation".

in Australia, New Zealand reports, \* = 15 is and Flii, to vote in the plan. The vote followed videowhich would see Colonial linked meetings in the three being a mutual organisation, scheme itself. belonging to its policyholders, into a conventional,

shareholder-owned company.

list its shares on the stock exchange. At an extraordinary gen-

eral meeting of Colonial Mutual in Melbourne on Friday, policyholders overdent of winning policyholder , whelmingly endorsed the necessary change in the organisation's articles on a The comments came after show of bands. A poll will

tralia's largest life office, is also said to be considering the possibility. The successful National

Mntual demutualisation may have encouraged support for the Colonial Mutual plan. Netional Mutual's shares now stand at about A\$1.79, comfortably above the A\$1.60 which institutional

investors were-asked to pay for them when they were floated last month. Colonial Mutual's policy holders - like those in National Mntual - will be allocated shares, at no

### Fall in land prices hits earnings

Japan's property market remained in the doldrums in the first half of this year, from the top three property developers, including a forecast of the first ever full year loss from Mitsui Fudosan, the industry leader.

By William Dawkins in Tokyo the second-largest developer, property bought at the peak property in Tokyo's business warned that full-year profits of Japan's asset price bubble district, did rather better would fall because of higher

depreciation charges. At Mitsui, unconsolidated according to interim results recurring profits - before tax and extraordinary items - fell 85 per cent to Y3.6bn (\$32.3m) on sales down 4.9 per cent to Y279.3bn.

he industry leader. It warned that it would Mitsui and Sumitomo make a Y70.3bn loss in the Realty and Development year to next March - after a reported falls in turnover in Y8.4bn profit last year the six months to Septemberause of an anticipated Mitsubishi Estate, which cent to Yibn on sales of ber, while Mitsubishi Estate, V110bn loss on the sale of owns prime commercial 0.7 per cent to Y93.4bn.

in the late 1980s.

The collapse in land prices since then has left Mitsui with a property portfolio which it estimates is worth Y92.8bn, some 54 per cent less than its book value of Y200bn. That is in line with industry estimates of a 50 to 80 per cent decline in land prices since the height of the

bubble five years ago.

than its larger competitor. with a 64.7 per cent increase in recurring profit to Y11.1bn on sales up 10.6 per

cent to Y195.3bn. It said profits had been helped by reduced debt servicing costs, thanks to record low interest rates.

This also enabled Sumitomo to increas recurring profits by 2.2 per cent to Yibn on sales down

### Japanese steel groups beat forecasts

By William Dawkins

Japan's steel industry, the world's largest, has showed it has weathered recent hard times better than its European and US competitors. The top six steel-makers,

led by Nippon Steel, tha world's biggest producer, reported a combined 7 per cent fall in parent company recurring profits - before tax and extraordinary items - in the eix months to September, compared with the same period last year, on a 1 per cent rise in sales.

Average profit margins were 2.7 per cent of sales, well below the 4 to 5 per cent the industry was earning before Japan'e economic stagnation began five years

Even so, the six steel makers' combined declina in earnings was six percentage points less steep than their own forecasts, and better mies, their main markets.

than the profit collapses reported over the eame

competitors. The companies' results varied widely, from a 3.2 per cent profits decline at Nip-pon Steel, to a near 70 per cent declina at Nisshin, and a 60.7 per cent increase at top performer NKK.

period by their main western

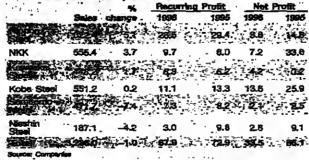

"The performance may be modest, but no other steel industry in the world has managed to keep profits from collapsing," said Mr Stephen Wolfe, steel analyst at UBS Securities in Tokyo. Like their competitors, Japan'e steel companies had to contend with an average I per cent fall in prices, because of the weakness of

world steel demand. They reported a combined 7 per cent decline in tonnage sold, a reflection of the weakness of the Japanese and larger east Asian econo-

coal and fron ore rose 15 per cent in the first half.

Some of the increase in raw material costs was offset in balance over the period.

to extract the bulk of its profits from cost reductions. The scope for staff cuts over the first six months was limited, since employment in the Japanese steel industry had already contracted by almost a quarter to 114,000 in the two years to the start of the current fiscal year.

has now shifted to the renewal of under-productive

Wakayama works. The comcash-flow to repaying debts, in order to reduce finance charges.

The steel makers were unanimously cautious about Japan's economic prospects in the current half. "The gradual economic recovery is expected to continue, but optimism is not warranted because of such uncertainties as the course of public works investments," said

Nippon Steel.

On that basis, three of the groups reduced their fullyear profits predictions, though Nippon, NKK and Nisshin kept their forecasts unchanged. The combined forecast for the big six was revised downwards by 9 per cent, to give an 8 per cent increase in recurring profits equipment, such as Sumi- for the year to next March.

#### Rise at Skandia fails to please

By Hugh Carnegy in Stockholm

A big rise in earnings from life assurance and savingslinked business belped Skandia, Sweden'e largest insurance group, report an 11 per cent increase in profits for the first nine mouths of 1996.

Pre-tax sarnings moved up to SKr2.18bn (\$330m) from SKr1.98bn at the same stage last year. This is the last reporting period before Mr Björn Wolrath, chief executive for the past 16 years, steps down at the end

Net earnings per share rose from SKr12 to SKr14 but the result did not impress investors, and Skan-dia chares ended Friday down SKr1.50 to SKr186.

A cause for concern was a 13 per cent drop in earnings by Skandia's non-life insurance and reinsurance business. Profits there fell from SKr2.5bn to SKr2.2bn.

A decline in non-life and reinsurance premiums from SKr18.6bn to SKr17.3bn was ascribed mainly to the negative effects of a strengthening this year of the Swedish krona. However, heavy claims left profits from Skandia's core Nordic area operations down from SKrlbn to SKrl82m.

On the positive side, there was big growth in life and nnit-linked operations, which expanded to account for 42 per cent of operating profits from 30 per cent. Group operating profits rose from SKr2.6bn to SKr2.8bn.

Reflecting the shifting bal-ance in the business, premiums at Skandia's AFS unit, which groups life and unitlinked operations, jumped from SKr19.3bn to SKr25.2bn. The biggest growth was in the US, where unit-linked business grew by 78 per cent, and in the UK, where it rose 27 per

AFS reported operating profits of SKr1.16bn - up from SKr782m last time. Of this, SKr1.05bn was accounted for by unit-linked assurance - which also took the lion's share of new preminms.

Investors are now keen to see how Skandia's strategy unfolds in the light of the changing structural balance after Mr Lars-Bric Petersson, currently head of Norcharge, in the new corporaic operations, takes over as chief executive from Mr

> There has been speculation that Skandia might spin-off AFS, which had a return on capital of 26 per cent in the first nine months, but this has been denied by the company.

#### **NEWS DIGEST**

### Porsche plans to restore dividend

Porsche, the German sports car maker, said holders of its quoted preference shares would receive their first dividend for four years after a jump in net profits from DM2m to DM48m (\$32m) in the year to July 31. Preference shareholders will receive DM2.50 a share for each of the three years they were paid no dividend. The previous dividend was DM2.50 for the 1991-92 financial year. Holders of new preference stock, issued in 1994, will be paid DM1.25 for half the 1993-94 fiscal year. For 1995-96, shareholders will also receive DM2.50.

The cost of the back-dated preference dividends will be DM5.9m, with the 1995-96 payment costing DM3.5m (including a resumed DM1.50 payment on the voting shares). Porsche said it would put DM34m into its reserves. The company is controlled by the Porsche and Piech families who own all the voting stock. Had the company not resumed preference dividends, holders of this class of stock would also have had voting rights under the company's statutes. Andrew Fisher, Frankfurt

#### Nordbanken talks denied

Mr Erik Asbrink, the Swedish finance minister, bas flatly denied reports that the government has discussed the possible acquisition of its majority stake in Nordbanken with Skandinaviska Euskilda Banken.

The reports were sparked when the chief executive of Statshypotek, a leading mortgage bank, told analysts on Friday be believed such discussions were under way. Hugh Carnegy, Stockholm

#### Spain to sell gas stake

Spain's centre-right government yesterday gave the go ahead for the sale of its remaining minority stake in Gas Natural, the country's dominant gas distributor, in the first public offering of the new administration'e

privatisation programme. The 3.81 per cent stake, worth some Pta33.8bn (\$266m) at recent market prices, is destined for institutional investors, with 40 per cent due to be placed abroad. However, the government holding company Sepi said this

proportion might vary depending on the level of demand. BBV Interactives will act as co-ordinator for the domestic tranche and SBC Warburg for the international tranche. Gas Natural was formed five years ago through the merger of gas companies based in Barcelona and David White, Madrid

#### Alfa considers expansion

Alfa, the Mexican conglomerate, is contemplating an expansion into South America, according to Mr Alfonso González Migoya, the company's chief financial officer. He confirmed last week that Alfa's steel division, Hylsamex. had signed up as an interested party in the privatisation of Sidor, a Venezuelan steel company. The sale of Sidor, which has a production capacity of about 2.2m tonnes, is expected to be completed by March next year.

Mr González Migoya said that Alfa was particularly interested in acquisitions in Colombia and Venezuela, co-signatories with Mexico of the Group of Three trade agreement. Since the Mexican peso devaluation of 1994, Alfa has prospered from a boom in exports, particularly in steel and petrochemicals, "It's important that Alfa is growing in their areas of strength like steel and petrochemicals," said Ms Kerry McHugh, an analyst at Goldman Sachs in New York. "Within Mexico, they cannot easily expand in the commodities that they are Daniel Dombey, Mexico City currently producing."

#### Rogers makes provision

Rogers Communications, Canada's biggest cable TV group, made a special C\$68m (US\$51m) provision for restructuring in the third quarter and reported a net loss of C\$148.8m or 87 cents a share, against a loss of C\$23.2m a year earlier. Revenues were C\$628m, up 13 per cent. Rogers warned that it will reduce its cable TV operating costs and review capital spending. Management and operations will be streamlined and it warned of coming lay-offs. The company employs around 10,000.

Third-quarter operating income was C\$179.8m, up 8 per cent. However depreciation and amortisation were up, total special charges were C\$91m and the sale of control of the Toronto Sun newspaper showed a loss of C\$23.9m. Robert Gibbens, Montreal

#### THE NATIONAL GRID COMPANY pic Reporting Of The Transmission Services Scheme Results

The Transmission Services School

The Transmission Services Scheme provides the National Grid Company pic ("NGC") with Incentives to manage certein elements of the costs that arise as a result of the difference between actual generation despatched on any particular day and the idealised day sheed forecast connection. perspanned on any periodice toy and the idealised day ahead forecast generation echedulo. These additional costs tall within what is known as "Uplift". NGC also has incentives to manage energy losses incurred on the high vortage transmission network within England and Wales. The Transmission Services Scheme was agreed between NGC and members of the Escricity Pool and runs for twelve months from 1st April 1986 in wal 31st March 1997 inclusive.

The total leval of Uplift during September 1998 was £73,950,501. The level of Uplift in respect of which NGC was incentiveed, during September 1998 was £31,255,678. The total payment to NGC, from Escaticity Pool Suppliers, as a result of the Transmission Services Scheme operating in September 1996 was £71,74,454).

The Transmission Services Scheme land wife in services in services in the content of the properties.

The Transmission Services. Scheme Includes incentives to control Transmission Losses. The payment to NGC for the management of Transmission Losses in Separates 1888 was £417,805. Payments 1886 was £417,005. Payments under the Transmission Sarvices Scheme are made and determined in accordance with the Electricity Pooling and Settlement Agreements in England and Wales. The calculation of the payments is a highly complex process, which may be subject to revision or correction, and therefore no reliance should be placed upon these figures as an indicator of the performance of The National Grid Company pic, or for any other purpose whatsoever. The figures reported above are rounded to the nearest pound, Further information may be obtained by contacting Energy Settlements and information Services Ltd, Telephone 0115 945 8789.

### 'Europhoria' poised to fade?

bond market's bullish- bonds closed at lower levels Loese aboot European monetary union when the optimistic comments of the French president about highest yielding in the Euro-Spain have more impact on prices than a sober economic assessment by the Continent'e prospective Central

Mr Jacouss Chirac's remarks last week on the prospects for Spanish membership at the first stage of Emu in 1999 contributed to a surge in Spanish and Italian bond prices. By contrast, the report by the European Monetary Institute, which said most prospective members they meet the Maastricht criteria, was initially ignored.

than those on UK gilts, leaving the British market - albeit briefly - as the second pean Union after Greece. Gilts, immune to the Emu enthusiasm and vulnerable to inflationary fears. regained some of the lost ground on Friday, with 10year yields closing margin-ally lower than those on Italian bonds. Even so on the same day Italian and Spanish 10-year spreads over Ger-many fell by 2 and 1 basis

points respectively, reflecting market confidence Indeed, according to the "Emu calculator", a new week of steady price gains - analytic tool introduced last

points to 191 and 163 basis

Italy will be a founder Emu percentage points over the week. As the graph shows, eince the beginning of August market expectations about the probability of Italian Emu membership has to a nearly two in three chance, while expectations of UK founder membership

on August 1 to 34 per cent. The calculator is based on movements in 10-year currency swap spreads, the most liquid currency swaps maturing beyond 1999, and takes into account the fact that some convergence is due to broader international economic trends and would occur irrespective of Emu.

have fallen from 44 per cent

market's expectation that income investors is how far government bond yields of the so-called "peripheral" block around Italy have still to fall. With inflation in Italy currently running about 2 per cent higher than in Ger-many, any further contraction in the yield spread is

now dependent on continued

progress towards Emu. But

even if these "peripheral" countries do become founder

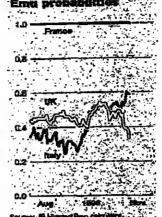

members there are limits on

how far yields will fall. Significantly, in this respect, over the last few weeks bond market analysts have begun to examine more closely the issue of sovereign Emu. Some are euggesting that even though currency and inflation risks will disappear the credit risks of

higher than many in the market are assuming.

Disparities between internal savings rates, rates of external borrowing and the extent of underfunded pension liabilities could contribyields on the euro-issues of There are also some cir

cumstances in which some countries could choose to opt out of Emn giving rise to "opt out" risk, to which investors will also attach a price. Furthermore the arrangements designed to reinforce fiscal rigour within Emn - such as the so-called tricht Treaty - could actu-ally increase credit risks. In a note published earlier this month Merrill Lynch cast

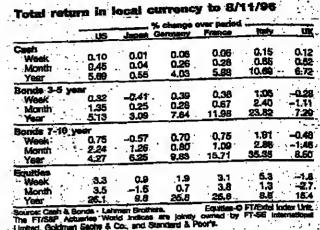

doubt on the credibility of the rule, under which EU members agreed that the union would not be liable for the commitments of central governments. Any "debt default by a member state would have systemic effects on the monetary union. The ensuing distress or liquidity problems in the banking system would impose higher risk premia and higher bond

yields for the entire mone-

tary block," said the note. In addition after the inception of monetary union, Emu members' domestic currency debt would effectively become foreign currency debt, partly because individual Emu members will lose their ability to print money. again increasing perceived credit risks for some coun-

Merrill suggests that yield spreads between German

and Italian euro-denominated bonds of the same maturity might be within a range of between 25 and 75 basis points. Mr Avinash Persaud. head of currency research at JP Morgan, thinks the spread could be as high as 100 basis points. As the markets digest these realities, "europhoria" which has sent markets flying higher in recent weeks could begin to fade.

#### COMPANY RESULTS DUE

#### Repsol hit by weak chemicals division

Repsol, the Spanish energy group, is expected to report next week net profit for the nine months to September of between Pta87.4bn (\$688m) and Pta93.5bn, compared with Pta92.2bn a year ear-

Earnings are likely to have suffered from a continued the company's petrochemical

The most important point to bear in mind when analysing Repsol's 1996 thirdquarter performance is that it will be compared with a good third quarter in 1995. particularly in its chemical

New Issue

and production and exploration activities," Beta Bolsa's Lucia Granda said.

Exploration and production earnings will be lifted by the consolidation in the third quarter of the company's 38 per cent stake in the Argentine oil company Astra, which was acquired

■ Veba, the German electricity-based conglomerate due to report on Wednesday, usual decline in electricity sales in the third quarter, but will show underlying strength in earnings.

Total sales, including the effect of the petrochemical tax, are estimated to have risen by up to 1.3 per cent to DM54.5bn (\$36bn). After benefiting from the

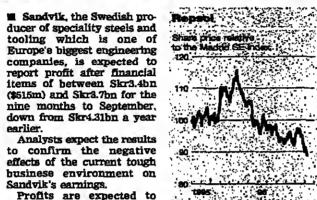

sales will continue to slow in

items of between Skr3.4bn (\$515m) and Skr3.7bn for the nine months to September, down from Skr4.31bn a year Analysts expect the results to confirm the negative effects of the current tough businese environment on

Sandvik's earnings.

Profits are expected to have been undermined by the general weakness in the European engineering sector, low steel prices and the stronger krona. But the outlook over the

longer term remains excellent, with the company forecast to show strong earnings long, cold winter in the first growth, when external quarter, growth in slectricity factors become more favourabls in later stages of the the third, analysts said. business cycle.

BASF is expected report strong growth in earnings and steady to slightly higher sales in the first nine months.

Earnings will be buoyed by last year's restructuring measures, which led to an extraordinary charge of at least DM800m (\$199m) last time. Christiane Dienhart of

Bayerische Vereinsbank is forecasting BASF'a pre-tax profit will rise 11.1 per cent to DM3.44bn on sales up 1.8 per cent at DM35.8bn.

■ BT's interim results, due on Thursday, will afford another opportunity for analysts to question the company about its plan to merge

with MCI of the US. The interim dividend, 7.9p. 6 per cent up on last time, has already been declared as part of the merger announce-ment. Interest will centre on whether the growth of the

Pre-tax profits of about 9885m (\$1.1bn) are expected after £200m in redundancy charges and £60m of other costs. Full year pre-tax profits of just over £3bn are

 British Steel is expected to report sharply reduced first-half profits on Monday, following a steep fall in steel prices this year. The pre-tax figure could more than halve to £250m (\$408m).

PowerGen, the generating company, will be under pressure to clarify its dividend policy when it reports its interims on Thursday.

INTERNATIONAL EQUITIES BY Comper Meddelm

Forecasts for pre-exceptional pre-tax profits range from £130m (\$212m) to £140m, up about 5 per cent. This figure is expected to

be flattered by a £40m exceptional gain from the disposal of a plant to Eastern Electricity and from the sale of some shares. A dividend of about 8p is forecast, up 23 South West Water, which

was saved from the clutches of two predators by the trade and industry secretary two weeks ago, reports interim results on Thursday.

The group unveiled a £15 customer rebate and a 20 per cent rise in the dividend payout immediately after the announcement that neither Severn Trent nor Wessex Water, two rival water utilities, would be allowed to go ahead with a takeover. This rise will bring its interim

Pre-tax profits, excluding exceptionals, are expected to be about £61m (\$99m), although these will be improved by exceptional gains of about £6m from changed lease arrangements. Along with a number of other water groups South West is expected to pay mainstream corporation tax ginum prodi

### Fast food whets Spanish appetites

Two very dissimilar equity Resves, a fund manager with per cent stake in the com- heavily indebted Telefonica. of the scale, last week's ini-tial public offering for Tele-Pizza, the fast-food company which has taken Spain by storm, and at the other end, the government's forthcoming sale of stock in Telefonica, the national telecommu-

nications operator. Bookbuilding for TelePizza closed late last week and dealers reported an overwhelmingly positive say. Moreover, the strong response. Global co-ordinademand for growth stocks tors BBV and Merrill Lynch declined to comment, but participants said the offer for 4.51m shares - or 45 per cent of the company - has been at least 50 times subscribed and would probably be priced at the top end of expected to surface before the Pta2,000 to Pta2,300 January 1997, banks are

"It's a terrific company thought to be the last Telewith very strong growth fonica privatisation sale. The rates and impressive management," said Ms Camilla sell most, if not all, of its 21.1 est rates has helped the share price, he warned.

growth companies on the Spanish stock market which is dominated by banks and utilities," she adds.

Given that 60 per cent of the flotation was targeted at Spanish investors, its success indicates that future share offerings may increasingly be weighted towards domestic rather than international investors, dealers demand for growth stocks highlighted by the deal is likely to prompt more such issues, despite looming privatisation sales for Telefonica, oil group Repsol and power utility Endesa.

Although Telefónica is not busy preparing what is La Caixa and Morgan Stanley are global co-ordinators. Although the last Telefon-

ica share sale in autumn 1995 got off to an inauspicious start, investors who did participate have cause for celebration. After slipping from the Pta1,637 issue price to Pta1,500 in the weeks following the sale, the shares steamed ahead during 1996, strongly outperforming the Spanish stock market. On Friday they closed at Pta2,655, up 58 per cent in the year to date. Analysts attribute thie

dazzling performance to several factors. Investors were heartened by the government's appointment in June of a dynamic and sharehold-er-friendly senior manage-

offerings have kept inves- Hambros Fund Management. pany, which would raise Other supportive fundamentors' eyes trained on the Also, "It has real rarity some \$3.5bn at current mar-Spanish market: at one end value - there are very few ket prices. Argentaria BBV. strong international franchise through Tisa, its overseas arm, which has benefited from strong growth in Latin America.

However, some say Telefónica'e shares may run out of steam. "Most of the good news is discounted in the share price," says one telecoms analyst. "Given this ' year's performance. I'd be surprised to see major

upside going forward." Also overshadowing Telefónica is the question of deregulation. Tslefónica chairman Mr Juan Villelonga has warned that that any delay in opening Spain's telecoms sector by January 1, 1998 would prompt the EU Commission to bar Telefonsource, an alliance of smaller European operators. Such a ban could knock 15 to 20 per cent off Telefónica's

#### **MARKETS:** This Week

After a near 200 point gain in the Dow Jones Industrial Average last week and a 10 basis point decline in long-term bond yields, the US markets would be forgiven for taking a breather as this week gets under way. Provided the dollar has stabilised after last week's downward lurch, though, the underlying conditions seem to remain generally positive.

Today's Veterans Day holiday will close many government and business offices, contributing to a quiet start to the week, but the stock market will be open as usual.

The main event will be notable for the lack of. interest it arouses Wednesday's Federal Open arket Committee meeting Not long ago, the first post-election meeting was seen as an opportunity for the Fed to raise interest rates, but recent evidence shows the economy slowing sharply of its own accord. Wall Street now expects rates to remain unchanged until well into next year.

The main economic releases this week are expected to confirm this picture. Wednesday's producer price index for October is expected to show a rise of 0.2 per cent, the same as the previous month.

- Charles 29 481

Excluding the usually more volatile food and energy components the rise is also expected to be 0.2 per cent. Retail price increases on Thursday are also expected to be line with the previous month, at 0.8 per cent, and retail sales figures are expected to register a slowdown from September's

surge of 0.7 per cent. Against the generally sitive background for bonds, the stock market's post-election rally could yet have further to go.

The UK markets have taken a battering over the last couple of weeks, following the surprise rise in base rates. Investors, instead of being impressed with the government's resolve on fighting inflation, have taken to worrying about how much further rates will have

Some clues may be gleaned from today'e producer prices numbers. from Wednesday's average sarnings and unemployment figures or from the retail prices date on Thursday.

Headline inflation is expected to have moved up to 3 per cent in October, compared with the ernment's target range of 1 to 2.5 per cent.

"Recent inflation performance in the UK has been disappointing" says Mr John Shepperd, chief economist at Yamaichi International (Europe). "The implication is that the Bank will push for another rate rise before the expected May election – possibly after the release of Q4 GDP in late January.

The change in the investment climate was reinforced by talk last week that institutions were switching money out of equities and into gilts and cash - stories that were given added impetus by

some record volume in the index options market on . Tuesday. Corporate news has almost been forgotten in the midst

of the rate debate and sterling's strength. The big bid the market had been waiting for turned out to be for a US company. But the market will have the chance to analyse figures this week from BT, as well as Allied Domecq, BAA. General Accident, Land Securities, PowerGen and

Railtrack, among others.

climbed further on Friday. doubts about the sustainability of the advance continued to mag some investors. The renewed rise on Wall Street helped equities, as did the firmer German bond market. Seeking to reinforce domestic confidence. Mr Hemz-Jörg Platzek of Dresdner Bank said the rise on world stock markets came with an unprecedented level of international monetary stability. With this went low interest rates. "The stock market has an excellent basis and it is not at all right to talk of pure euphoria," he said.

With the impending

Deutsche Telekom issue expected to be at least four times over-subscribed international interest in the German market is likely to increase. Telekom's listing will start next Monday in Jermany, New York and Tokvo after the issue price has been set on Sunday

As the German stock market

As Germany's results season continues, Munich Re will today detail its improved performance. It has already announced a rise in the dividend for the fiscal year to June 30. Since the shares of the world's largest reinsurer were included in the German Dax index of 30 blue chips in

September, its shares have risen sharply. On Friday, they closed at DM3,805, a

Also due this week are nine-month results from Germany's big banks, which have put on solid gains this year - though the third quarter has seen a alowdown.

Among non-financials, the BASF chemical and Veba energy and telecommunications concerns will also report

Spain'e third biggest con-

etruction company, has

focus on the weakening bond market and exchange rate movements, following the dollar's steep fall against the yen last week. The yen's surge was triggered by remarks by Mr Eisuke Sakakihara, a senior official in charge of exchange rate policy, who indicated in a newspaper interview that the one-way yen correction phase was over and the government would no longer lead the yen lower. The Bank of Japan and the

Economic Planning Agency support Mr Sakakibara's view that the strength of the Japanese economy has been underestimated - signalling agreement among Japan'e financial authorities on a stronger yen, most likely in the Y110-Y113 range, and a possible increase in the official discount rate, which is currently at 0.5 per cent. Raising short-term rates would boost bond yields and increase the flow of funds to Japan, creating demand for the yen and curbing the dollar'e tendency to

appreciate against it In response, the bond market fell sharply at the end of the week and equities picked up, with the Nikkei 225 up 429.93 points on Friday to close at 21,201.04 its fourth-largest single-day gain this year.

Government bond futures and cash bonds, on the other hand, plunged for the second consecutive day on Friday amid heavy sales, with the December futures contract on 10-year government bonds closing at 123.96, down 0.79 from Thursday after losing 1.65 over two days.

"Perhaps it'e now over for the bond market particularly as it's becoming very difficult to justify a negative view of the economy." said Mr Jason James of James Capel.

### Platinum producers await review

looking for some crumbs of comfort when Johnson Matthev, the world's biggest platinum group metals marketing organisation, publishes its interim review of the

market tomorrow. In February the platinum price jumped to \$433 an ounce as it followed gold. which raced to a six-year peak. But the excitement soon subsided and last month platinum'e price fell below the price of gold for the first time in three years.

Not many years ago, platinum attracted a constant \$100 an ounce premium. That changed when Russia began selling platinum and palladium from its stockpiles to raise desperately needed foreign earnings. Both met-

als are essential in some catalysis, particularly automotive anti-pollution catalysts. In its market review in May, JM suggested platinum's price would range between \$390 and \$430 an. ounce for the rest of 1996. But this proved over-optimis-

tic platinum has been well below the bottom end of that range for some weeks and closed in London on Friday, at \$382.45 an ounce. JM was also over-confident about the palladium price, which it suggested would be

#### **MARKETS:** This Week

### Banking crisis besets Prague

Winter has arrived early on the Prague stock exchange. Since early September, when the extent of the crisis of confidence affecting the Czech banking sector became apparent, share prices have tumbled nearly 15 per cent.

The PX 50 index of leading shares is now hovering around 500. Investors have retreated to the sidelines to wait out the market'e gloomiest period since it opened for business in 1993.

While many foreign investors, whose activity drives the market, say the correction may have been ovardone on economic and corporate fundamentals, there is little likelihood of any upturn until the government sorts out its banking and regulatory problems. Next weekend's senate election is also being watched closely for signs of an end to political uncertainty.

In many respects, the banking crisis - s series of failures among small banks this year, which peaked in late eummer with the collapse of Kreditni Banka and the related emergency rescue of Agrobanka, the country's largest fully private hank - was the last straw for investors on the PSE

They had seemed prepared period of minority govern-

Prague. "People had it pretty easy here for a while. Now there is a lot more careful analysis and a lot more careful balancing of risk and

reward."

Although there is some evidence of foreign selling of Czech shares, there has not been 9 dash for the axit. Share prices have tumbled because of a lack of buyers rather than under pressure from a wave of selling, with daily turnover of about \$30m during October. Third-quarter results from leading companies were generally well-

receive But the wider problems, and uncertainty over growth prospects for 1997, mean "there is no reason to get in now", says Mr Jack Schrantz, senior analyst st Creditanstalt Securities in

Instead, attention has turned to issues outside the market that will have s direct bearing on the direction of share prices in the medium term.

Immediately ahead is the senate election. Opinion polls suggest that the Civic Democratic party of prima minister Mr Václav Klaus will do well and could have a majority in the new chamber, which may go some way towards offsetting his government's minority in the

agement at Patria Finance in lower house of parliament Mr Klaus is having severe problems adapting to the greater influence of the opposition Social Democrats. on whom his government relies for support.

The next crucial test of how that support holds up is in the dabate on the 1997 budget, which still has to pass its final reading. And while the senate will have little real power, the election result is important for the clues it will give to how long the current government will be able to survive.

Regulation of the capital markets has become a liva issue since June, when the Social Democrats won many votes on the question of law and order in the markets. Investment funds run by

the large banks and other managers have effective control of the country's large group of medium-sized (\$100m-\$250m) companies, which many analysts view as a key to the future success of the Czech economy.

It is in this sector of the market, affecting perhaps 50 companies, that the thorny issue of minority chareholder protection arises. Managers of these funds often ignore reporting rules, acting as a deterrent to foreign invectors eecking reater choice in the PSE. While some form of securi-

ties and exchange commission is likely to be in place by the middle of next year, it will have to win the support of those fund managers. Most crucial, however, is the need to solve the bank-

ing crisis. A tussle is devel-

oping hetween the govern-

ment and the central bank over completing privatisation of the sector, regarded as essential for its long-term health and a definite strategy has yet to be unveiled. Mr Glenn Wellman, managing director and chief investment manager at the \$260m Central European Growth Fund, run by Credit Suisse Investment Management in London, says a clear strategy for privatisation is essential. With so much riding on the outcome, "the

way that is done might give the market a positive sur-

prise", he concludes.

### Climate comes right for New Zealand issues

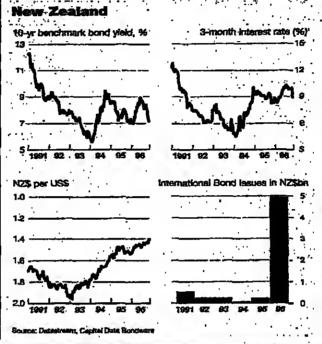

INTERNATIONAL BONDS By Samer Iskandar

Primary market activity this lars more attractive than the year in New Zealand dollardenominated eurobonds has reached all-time highs. Some NZ\$5bn of new bonds have been issued since the start of the year, compared with NZ\$260m last year and NZ\$100m in 1994.

More than 80 per cent of tha total raised since the beginning of the 1990s has been issued in the past 10 months alone. This surge in activity has been spurred by a favourable market environment, with subdued inflation, an appreciating currency, healthy government finances and a generous yield premium over bonds of other "dollar-bloc" countries such as Canada and Aus-

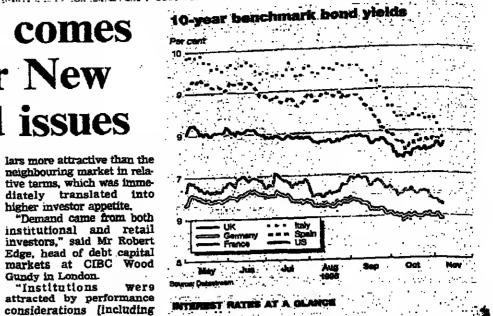

tralia. "The turning point came when the New Zealand yield curve climbed above the Australian curve," said Mr Greg Nottle, director of bond origination at Hambros Bank in London.

This made bonds denominated in New Zealand dol-

5.00

the first quarter of the year, which led to the issuance boom in the spring.

While high yields are a boon to investors, they are usually a strong deterrent to borrowers. However, this was not the case in the New Zealand market, where a technical anomaly allowed issuance at prices that suited both sellers and buyers of bonds.

This anomaly occurred on the swap market, and was due to a squeeze on the benchmark government bond maturing in 1998.

Because this bond became expensive, eurobonds issued with the same maturity could be offered very cheaply in relative terms, while the high level of swap spreads allowed issuers to convert the funds back into their home currency at an attractive final cost.

"Market conditions were good for both borrowers and investors," said Mr Gerry Moes, director of eurobond syndication at Hambros, "As the yield curve shifted downwards, swap spreads widened substantially."

Swap spreads on two-year maturities reached their peak last month, allowing UBS, the triple-A rated Swiss bank, to raise financing at a

cost well below Libor while offering investors a yield premium of 35 basis points over the benchmark.

Yields were also very attractive in absolute terms, and some investors managed to lock-in coupons of up to 9% per cent on three-year paper during the interest rate peak in June. But the subsequent rally gradually hrought returns on new paper down to the 7-7% per cent range.

Looking forward, observers believe 1997 could also be very active, although few expect a repeat of this year's exceptional market conditions.

A recent correction in swap apreads has reduced the attractiveness of issuing two-year bonds, and difficulties in forming a new coalition government after last month'e election are weigh ing on investor sentiment.

Furthermore, the currency'a appreciation is unlikely to continue at its current pace, and the sharp rally has made available yields less attractive.

"As interest rates fall, investors might feel they are not being paid enough to assume the currency risk," said Mr Edge at CIBC Wood Gundy.

IN THE MATTER OF REHABILITATION
OF THE CONFEDERATION LIFE INSURANCE
COMPANY IN THE UNITED STATES

Case No. 94-78300-CR Hon. Thomas L. 9rown

BAR DATE NOTICE TO ALL POLICYHOLDERS, CREDITORS, CLAIMANTS, AND ALL OTHER INTERESTED PARTIES REGARDING CONFEDERATION LIFE INSURANCE COMPANY IN THE UNITED STATES ("CLIC (U.S.)")

STATE OF MICHIGAN

IN THE CIRCUIT COURT FOR THE COUNTY OF INGHAM

Oo Ocrober 23, 1996, the Circuit Court for the County of Ingham, State of Michigan entered an Order Coofirming Plan of Rehabilitation ("Confirmation Order") and o Liquidation Order for CLIC (U.S.) ("Liquidation Order"). The Confirmation Order confirms the Plan of Rehabilitation for CLIC (U.S.) ("Plan"), as amended, and the Liquidation Order appoints the Commissioner of Insurance of the State of Michigan as the Liquidation Order appoints the Commissioner of Insurance of the State of Michigan as the Liquidator for CLIC (U.S.).

Pursuant to the Liquidation Order, except as provided below, any and all claims against CLIC (U.S.) must be filed, together with proper proofs thereof, on or before January 24, 1997 ("Bar Date"). Claims under insurance policies need not be filed, except where the existence of a policy is in dispute, or there is a dispute as to whether a claimant is a policyholder of CLIC (U.S.). Except as otherwise provided in the Plan or pursuant to order of this Court, administrative claims incurred in the ordinary course of business of rehabilitation. claims (other than administrative claims incurred in the ordinary course of business of rehabilitating of iquidating CLIC (U.S.) that the Commissioner has treated as claims iocurred in the ordinary course of business of rehabilitations of business of business of that the CLIC (U.S.) on or before the later of (a) December 23, 1996 course of business! must be filed with CLIC (U.S.) on or before the later of (a) December 23, 1996 and (b) 60 days following the accrual of such administrative claim; provided, however, that such administrative claims must be filed no later than 60 days prior to the discharge of the liquidator of CLIC (U.S.) pursuant to MCL 500.8146 ("Administrative Claims Bar Onte").

Cleims for which a proof of claim is required that are not filed by the Bar Onte or Administrative Claims Bar Onte, as applicable, shall conclusively be deemed waived and holders of such claims shall be barred from asserting any claim against CLIC (U.S.) or any successor to CLIC (U.S.) and state of claim on the form

(U.S.). Any entity asserting such a claim against CLIC (U.S.) or any successor to CLIC (U.S.). Any entity asserting such a claim against CLIC (U.S.) must file a proof of claim on the form approved by the court and in the manner prescribed therein.

On or before November 4, 1996, copies of the Confirmation Order, Liquidation Order and

On or before November 4, 1996, copies of the Confirmation Order, Liquidation Order and proof of elaim forms and instructions will have been mailed to all known persons having claims under policies, guaranty associations, creditors, payees, agents, and regulators of CLIC (U.S.). If you have not received a copy of those meterials said you think you are a policyholder, contract owner, payee or other claimant under a policy or contract issued by Confederation Life, or other creditor of CLIC (U.S.), call CLIC (U.S.) at 1-800-233-4634.

SCHLUMBERGER AND SLIGOS SIGN LETTER OF INTENT REGARDING **SMART CARD BUSINESS** New York, November 6. 1996 - Schlumberger Limited and SLIGOS

ed today the rigning of a letter of intent regarding: The purchase of Solaic SA, a wholly-owned subsidiary of SLIGOS, by Schlumberger Electronic Transactions. Solaic is a magnetic and smart card manufacturer with 1995 revenue of FF416 million, and has manufacturing facilities in France and Spain and marketing operations primarily in Germany, Spain, France and the UK.

A partnership to jointly develop smart card-based systems. The transaction is subject to, among other matters, the signing of definitive

Schlumberger is an international, worldwide leader in oilfield services measurement and systems, and telecommunications with operations in over 100 countries and 54,000 employees. Revenue for the first nine months of

1996 was \$6.4 billion. The SLIGOS group is one of Europe's foremost information management services companies with 1995 revenue of FF4.3 billion and 6.350 employees in 11 European countries. Its four core businesses are payment ons and network systems,

#### **EXPRESSIONS OF INTEREST Natural Gas Business**

**Australian Energy Investment** 

We are please to invite expressions of interest for the purchase of a regional natural gas distribution business in Australia which would bring a business foothold in an increasingly deregulated Australian energy industry. This is a unique opportunity to acquire a business which is one of only three natural gas reticulation networks in the state of New South

The natural gas business includes a 524 km gas reticulation systems which supplies I.5FJ per annum of gas to approximately I3.500 customers in the Wagga Wagga region, comprising industrial, commen

The natural cas business offers: strong cash flow experienced manage

rrunities to grow the business

Interested parties may obtain Expressions of Interest documentation by contacting Dr Victor Rudenno on 61 2 9256 8834 or Ms Melinda Snowder on 61 2 9256 8839 or by faxing your contact details to 61 2 9256 8838. Expressions of Interest close at 2pm, Monday 25 November 1996.

### ENERGY EFFICIENCY

### A business praying for 'cultural revolution'

In theory, concern about global warming creates a huge market for energy efficient services. In practice, however, the big opportunities may depend on dramatic social and political change. Leyla Boulton explains

signals to consumers.

"An electricity company makes money by selling electricity, not by saving it." says one UK official. "For

Chief of these worries is global warming, whose bestknown man-made causa is the burning of fossil fuels by industry and the general

Other concerns include "acid rain" from power is not rational to go for plants, which devastates for energy efficiency." ests and lakes, and air pollntion from road transport.

Having become fashionable after tha 1973 Middle into account costs in terms East oil crisis, energy efficiency has attracted considerably less attention in more recent years as oil and gas prices have fallen and big found around the world.

But growing evidence that a changing climate could trigger a rise in temperatures and sea levels may lead to renewed interest in energy efficiency on an international scale. Global warming could provide an unprecedented stimulus for companies offering energy efficiency goods and services, a market estimated by the International Institute for Energy Conservation (IIEC) at \$1,800bn over the next 40 years.

In just over a year's time, mote energy efficiency governments are due to meet in Kyoto to negotiate fixed targets for the developed world to reduce its greenhouse gas emissions after tha year 2000.

The Inter-Governmental Panel on Climate Change to correct the market failure (IPCC), charged by govern- globally, however, the ments to research the threat, reported earlier this year that the "balance of evidence" suggested a "discernible" human influence on cli-

Tha conclusion triggered since the 1970s oil crists in an outcry from fossil fuel and other industry lobbyists, who suggested it did not properly summarise the more tantetive 500-page IPCC report it was derived from. The findings, however, received the full backing of most governments meeting in Geneva this summer.

Governments' disagreements are with each other over the best way of tackling the problem.

While some European nations favour carbon taxes, the US is vehemently opposed to any new taxation. eferring instead proposals to trade permits for carbon dioxide emissions internationally.

Given these divisions, promoting greater energy efficiency is likely to emerge as the least costly, and therefore least controversial solu-

This is because even if, as one official puts it, "global warming turns out to be a hoax", wasting less energy will lead to a number of other environmental and economic benefits.

Mr Michael Jefferson, deputy secretary-general of the World Energy Council, reckone that energy efficiency measures could easily cut carbon dioxide emissions by around 20 to 30 per cent.

"It is not clear," he says, apart from inartia, ignorance, and institutional complacency, what the obstacles

households, which account for 30 per cent of UK energy consumption, could save £3bn a year on their energy bills for a one-off investment

This is a pretty attractive payback," says Mr Eoin Lees, the Energy Saving Trust's chief executive. Why is this investment not Mr Lees says the main rea-

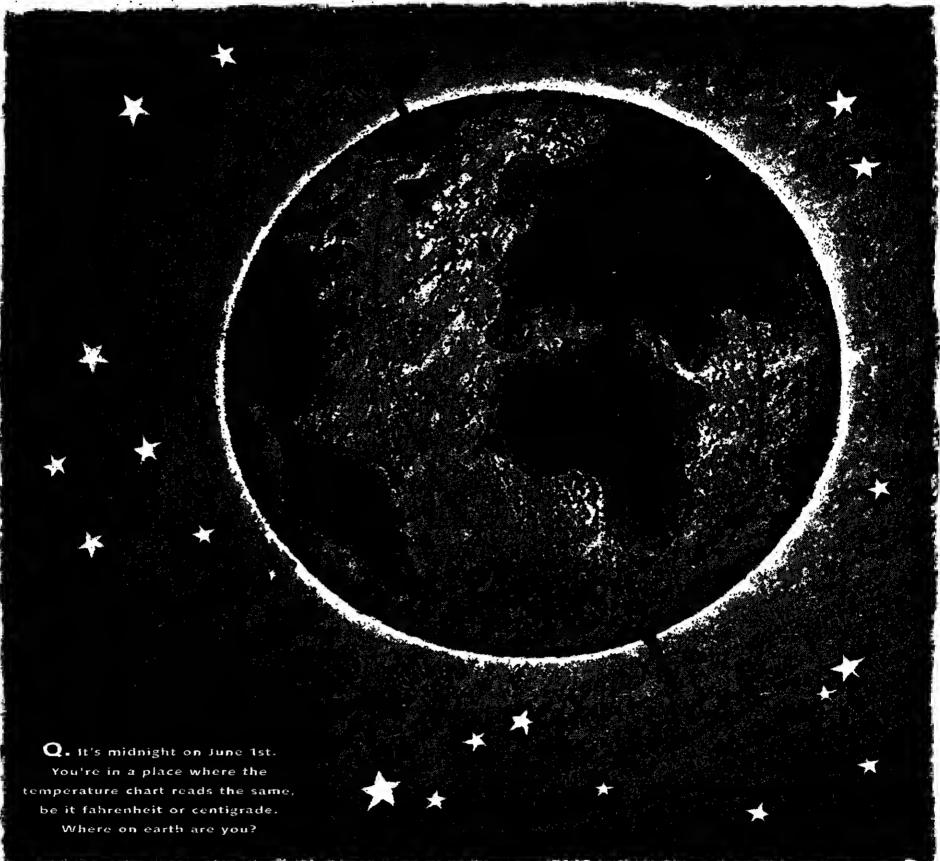

son is a lack of knowledge about the abundance of free advice for both business and households on how to make such savings. Also on offer for house-

nology such as gas-con-densed boilers. Another obstacle to change is the general public's desire to spend money on things that offer immediate gratification rather than thing that, according to recent market research, is seen as remote and irrele-

The Trust reckons that vant to people's lifestyles. In a bid to correct that perception, the Trust in January launches a marketing campaign to effect a "minicultural revolution" that will make energy efficiency fash-

be only part of the answer. A third obstacle is the lack of a co-ordinated policy that combines education with appropriate price signals and demanding energy efficiency standards. Mr Lees fears that leaving matters to the market, especially as the Also on offer for house- of electricity markets looms holds are cash incentives to in 1998, will mean that instal energy-efficient tech- anergy . efficiency, takes much longer to make an impact. Efforts to pumpprime the market for new technologies are also important in order to help bring down the price of alternative power. The success of government support is

### Can taking a global view help solve your energy problems?

These days, conventional solutions simply will not suffice. With energy markets constantly changing, it's hard to keep sight of the bigger picture.

Deregulation, privatization and new technology are opening up a world of possibilities. The opportunities are immense but so are the risks.

Which are worth taking? And what solutions are going to work best for you in the long run? For a clearer view, you could start by talking to us. Enron.

We rate as one of the world's leading energy companies, involved in every aspect of the energy business.

Pipeline construction and operation, major power projects, production and generation... In short, the scope of our global activities runs all the way through from exploration to supply.

But there's something else we can supply in abundance. Ideas. The kind of ideas that can redefine the way you think about energy.

First, we listen. Then we draw on the spectrum of our experience to devise a fully integrated solution specifically tailored to meet your particular needs.

Supply, finance, risk management, design,

construction, operation...whatever the problem, you can count on us to offer you a more creative energy solution.

Oh, and about that global question we posed above. The answer? You'd be in the Antarctic at a temperature of minus 40 degrees.

For further information please call: 0171-316 5342.

## light halts green taxation

Compared with Scandinavia, Britain's policy on 'eco taxes' is unenlightened

An advertising campaign to be launched next January by Britain's Energy Saving Trust (EST) could easily be

seen as a sign of despair. Disappointed by its inability to get a better reception for the cause of energy efficiency, the government quango recently conducted market research to find out more eager to save money by reducing their energy bills.

Mr Eoin Lees, the trust's cblef executive, says the research shows that "the idea of energy-saving is lowtech, passé, and, like san-dals, not fashionable". The £3m advertising cam-

paign, devised by Saatchi & Saatchi, will seek to correct this, making energy waste as unfashionable as drink-driv-

duties every year already constitutes a significant tax, whose bite will be felt with

However, despite the recent introduction of a landfili tax, British efforts on the eco-taxation front still pale in comparison with those of Scandinavia.

Advocates of environmentally-motivated taxes, including the European Commission, the European Union's executive body, argue they can help reduce unemployment as well as protect the environment, provided they why consumers were not are accompanied by corresponding cuts in labour taxes.

But they remain a sensitive issue - at both ends of the political spectrum. Britain's Institute for Public Policy Research (IPPR), a think tank set up to belp the Labour party plan for gov-ernment, recently produced a dazzling blueprint' for an environmental reform of the UK tax system.

tries a convenient excuse for failing to agree to Commission proposals for a unified EU "carbon tax" that would help fight global warming by reducing carbon dioxide emission from the burning of

fossil fuels. However, Denmark, Sweden, and Norway have been leading the way in imposing their own carbon taxes. And some analysts believe that it is only a question of time before the concept of eco-taxation gains more widespread currency.

A spate of new reports Illustrates the improved level of public information about a subject that frightens politicians but makes perfect sense to many economists who see eco-taxation as helping to kill two birds pollution and unemployment - with one stone.

According to the Copen-hagen-based European Envi-ronment Agency<sup>2</sup>, energy taxes account for only 5.2 of total tax revenue. But it says that well-designed, environ-Given a distinct lack of thetic to its ideas, Labour's the party's environment can be extremely effective and should be used more The London-based IPPR

says that environmental taxation is most likely to work if it is supported by regula-

"Regulations should be

of environmental taxes by increasing the elasticity of demand for the activity being taxed," it says. "An energy tax will be more effective when hacked by minimum efficiency standards for hulldings and appliances."

The IPPR also recommends public information campaigns and clear signals from government that any price increases through taxation are there to stay.

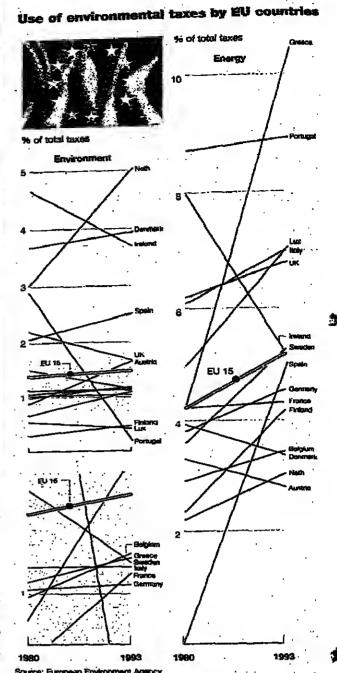

Demand is fairly inelastic if there is an expectation that a price increase will be be reversed fairly quickly. The picture is very different if higher prices per-sist...then it will become worth a company's while investing in energy efficiency equipment. As the investment cycle passes, the company will acquire more

efficient machinery." Otherwise critics argue quite convincingly that only very heavy taxes, which are politically unsustainable in most cases, will bave any impact on people's behavlour.

**Energy taxes/continental Europe:** by Robert Corzine

### Emu may dictate changes in policy

the environment could result from the race to meet Maastricht targets

Environmental economic priorities rarely merge, but events in western Europe this year suggest that the two may be about to converge.

economic and monetary union and the desire of a number of west European countries to be among the first states to adopt a single currency may cause some governments to re-examine their positions on energy taxation and subsidies. The search for spending cuts and new revenues to bring their countries into line with the economic criteria set down by the European Union could cause them to focus on the energy sector, whose large size means It is always

tax authorities. Analysts say a pattern of higher energy-related taxes and lower energy subsidies could arise, with a number of beneficial, if unintended, side-effects for the environment.

an attractive industry for

Such a move would be a substantial shift for most industrial countries, which have traditionally shown little interest in using energy taxes as a way of meeting

environmental goals. "Taxation is intuitively stiractive, and in theory the most economically efficient approach to bringing about emission reductions," the International Energy Agency (IEA), which monitors energy markets on behalf of western industrialised countries, noted in a report earlier this year.

But the IEA went on to sdmit that in practice "public resistance and concern about the international competitiveness of husiness severely limits governments' room for manoeuvre".

Countries that have justifled higher energy taxes have often used environmental arguments as a smoke screen for what would otherwise be viewed as simply another tax rise. In recent years, the British government, for example, has raised taxes on petrol by at least 5 per cent a year, osteosibly to help the country meet its emission control commitments.

Although the government's justification for its policy bas been met with widespread scepticism, the environmental merits of such a strategy have been generally accepted by the public. The strategy also more efficient use of trans- network.

Taxes that benefit port fuels. One study this year even predicted that if continued, such a taxation regime will eventually lead to a contraction in petrol demand in the UK, possibly as early as the beginning of

the next decade. But other attempts to use environmental arguments to explain tax rises have failed to attract public support. Two years ago, the UK govvalue added taxation on domestic fuel and power on environmental grounds. But it ran into strong opposition from members of the public and its plan was never fully

implemented.

would come on top of plans to introduce more stringent fuel specifications in the EU. The European refining ludustry is facing multibillion dollar, environmental-related investments over the next few years to bring Its output into line with new EU fuel standards. (The expected cost to the UK refining industry alone is ernment tried to justify the \$1 bn by 2000.) Such invest-imposition of the full rate of ments will inevitably nut upward pressure on fuel prices, say analysts.

Privatisation may be a better method of raising revenues in the run-up to Emu. This is particularly possible in the natural gas industry.

ernments moving towards monetary union may be able to overcome any similar resistance to new energy-related taxes by pointing to the greater economic good that may emerge from the adoption of a single currency.

Targeting the energy sector for extra revenues, however, msy not be all that simple. Taxation levels are already high in most European countries. Various taxes and excise duties account for about threequarters of the cost of petrol in most of Europe, and more than half the retail cost of diesel

In Germany, energy taxes already support other economic goals. A 1994 increase on oil products was used to reduce the debt of the German railway monopoly and

Continental European gov- at present tightly controlled in most European countries by state monopolies. Business and industry are pressing EU governments to introduce competition to reduce gas prices, which are much higher in continental Europe than in the UK or tbe US.

Privatisations could be another example of the collision hetween economic necessity and environmental protection. Advocates of gas liheralisation say a freer market may encourage large energy users, such as power generators, to switch from dirtler, coal-fired plants to cleaner, gas-driveo units. They point to the experience of the UK, where the gas market is due to be fully liberalised by 1998. The "dash for gas" by British power station operators is expected to account for about half of to finance the extension of the country's projected looks like it will result in the the national transportation reduction of 33.4m tonnes of carbon dioxide.

### HAMPSHIRE AND ITS CITIES

Following the govern-ment's white paper on com-

petitiveness, the HEP is implementing a competitive-

ness plan to gauge Hamp-

shire's structural strengths

Many are anxious to

counter the 1980s view that

Hampshire was satisfied

with the way things were, and was thus "closed for

business" to outsiders. A ral-

lying call often heard now is that Hampshire and its cities are "open for business".

working for our interests which we did not have 10

years ago," says Richard

Mead, estates manager at

IBM in Portsmouth, IBM has

three centres in Hampshire:

at Hursley near Winchester,

### The county is fully open for business

Hampshire is keen to shed the legacies of the overheated, closed-shop 1980s, and to get on with meeting the new challenges. **Graham Bowley** reports

The painful economic the military, especially Spain, France and Russia downturn of the early 1990s, following fast growth in the late 1980s, exposed weak-nesses in the Hampshire economy which the county is still trying to put right.

The downturn showed how dependent Hampshire and its cities had become on service sector jobs, many of them unsustainable, created during the 1980s; and on the defence industry, which suddenly faced large cutbacks following the decision to scale down defence spend-

ing.
The challenge now for the county, the UK's biggest by population outside metropolitan areas, is to redevelop its neglected export sectors, to attract inward investment in a sustainable manner, and to manage the contraction of its defence-related economy. The last, the county is discovering, is throwing up as many opportunities as problems as companies diversify, and as huge swathes of

around Portsmouth.

Councillor Mike Hancock, leader of the Hampshire County Council, says: "Peo-ple in Hampshire have confidence in the future despite the setback of the early 1990s. With our good infrastructure, we are seen as a desirable location for mod-

ern industries."
There does appear to be a renewed will in Hampshire to fight its corner for new investment, and for help from central government, which many feel it missed out on in the last decade. Economic partnerships between government agencies, local authorities and the private sector have been forged, such as the Hampshire Economic Partnership (HEP), South-East Hampshire Economic Partnership and the Farnborough Aerospace Consortium. Companies are being encouraged to work closely with their counterparts in other Euro-

in Basingstoke, and its Portsmouth headquarters. Whether this will translate the county is not yet clear. Business Strategies, the regional consultancy, calculates that Hampshire is contributing a declining proportion to the UK's gross domestic product, a trend which it says is set to continue. "We think Hampshire saw its best days in the late 1980s. Now it is struggling," says Jacqui Timothy, senior economist at Business Strat-

Hampshire did well in the UK economic boom towards the end of the 1980s. It was popular among companies wishing to move out of London. Basingstoke, in the north of the county did especially well, attracting such large companies as the Automobile Association and Winterthur, the insurance com-New companies, mainly in the services sector, chose Hampshire and its

They were attracted by a pretty and varied countryside which includes the New Forest, a long coastline and historic cities such as Winchester. They also found appealing the county's good transport links which include the M3 motorway linking north and south and which, it is hoped, will and Southampton. There is

lessen the county's slight north-south divide; and the M27 which links Portsmouth also a developed rail network. Hampshire has two of the UK's higgest ports in Southampton and Portsmouth, offering ready access to the continent and beyond. It has a new international airport outside Southampton. Gatwick and Heathrow are only an hour away.

And companies were attracted also by a large and skilled workforce and an impressive educational infra-

universities in Southampton and Portsmouth.

GDP grew by an impres sive 7 per cent in 1988. But by the end of the decade several parts of the county, particularly in the north, were overheating in labour and property markets.

One big problem was that behind the rapid growth there was a shift away from the county's key export-oriented sectors.

The subsequent recession saw GDP growth fall to 14 per cent hy 1990, followed by two years of contraction. Unemployment rose sharply. The county which prided itself on its strong European ties went from being a highranking European region in terms of GDP to a middleranking one, although it has recovered slightly in the last couple of years,

GDP is forecast to grow 2.3 per cent this year, rising to

structure which includes 3.1 per cent next year. Unemployment has fallen across the county, although it remains high in certain black spots, particularly in the inner cities of Southampton and Portsmouth.

One of the problems to emerge since the recession is that the flow of companies relocating to the county from London has slowed. Another is the amount of surplus property space, a hangover from the 1980s boom, which reduces the scope for new development. John Rees-Evans, head of economic development at Hampshire County Council, estimates that Basingstoke, for example, still has 1m sq ft of available office

Another perceived challenge facing Hampshire is the county's dependence on defence. Hampshire is probahly unique in the UK by being bome to all three of

hampshire is near pertect

(in fact it's near everywhere)

Hampshire has always been famous for its major ports and their worldwide trade links. Yet with the rise and rise of Southampton, Portsmouth, Basingstoke and Farnborough as centres of business and research excellence, Hampshire is also a county of lively. enterprising cities and towns. Cities and towns that are a short road or rail journey from London, and in a county with direct air links to the key continental hubs.

But there are other reasons why so many major UK businesses and over 300 foreignowned organisations consider themselves in good company here. Businesses such as IBM. British Aerospace and Wella depend for their success on being in close proximity to the right mix of skills, facilities, suppliers and partners - and they require an infrastructure to support this mix. Hampshire can offer firms this unique blend - as well as providing a superb quality of life in an area of outstanding natural beauty.

To find out why Hampshire is near perfect, send for an information pack.

■ Portsmouth: by Graham Bowley

### Stand by for the millennium

The city is determined to turn the losses around into opportunities

Portsmouth's star is rising. The island city on Hampshire'a south coast, home to the royal navy for 500 years, lagged behind some of its faster growing Hampshire nelghbours such as Basingstoke in the 1980s. Its trouhles deepened early this decade as recession gripped the county and defence cutbacks bit hard, forcing traditional defence suppliers to find other markets.

But the city has done much to promote its image. and reality is now beginning to match the city's high aspi-

"We had all our eggs in one basket, in defence and in services which suffered during the recession, but now Portsmouth is keen to diversify and seek an international dimension," says Rob-ert Dimpfl, business development officer at Portsmouth's Regional Business

Centre. The heavy historical legacy which held Portsmouth back when the defence industry began to contract is now being turned to the clty's advantage. For one thing, large tracts of prime land close to the harbour for- the city. It is the only sucmerly owned by the Ministry of Defence are coming on to UK and it is a prime link to the market, offering new Europe," says Martin Putopportunities to private sec-

tor companies. For another, the city is keen to promote tourism as unveiled an 11 acre expanone of its main industries tourism already contributes £320m a year to the local economy heavily the city's links with the navy and its historic maritime past.

Lord Nelson's HMS Victory. Henry VIII's Mary Rose, and the Royal Naval Museum.

regeneration is to be the development of Portsmouth harbour. The harbour has been chosen by the Millennium Commission as one of 12 landmark sites around the the century. The Commission awarded the city more than £40m for the develop- sive stable of large compament of the harbour, which nies, testament to the area's

the city must match with its own funds.

The development, on up to 700 acres of former defence land which has been closed to the public for about 250 years, will include a 165-metre high Millennium Tower. 5 km of waterside public promenades, waterbuses connecting Portsmouth and Gosport on either side of the harhour, and the development of Gunwharf Quay, a former defence training site, into a waterfront area with shops and leisure facilities.

On the Gosport side of the harbour, Gosport Esplanade, Priddy's Hard and Royal Clarence Yard are all to be developed. There are plans for a £100m light rapid translt system which will pass under the harbour to link Portsmouth with Gosport

and nearby Fareham. We have been able to turn the peace dividend into an opportunity rather than a downside," says Mark Ludmon of Portsmouth City

Aside from tourism, the sea is still a generator of wealth for the city. Portsmouth is the UK's second busiest and fastest-growing ferry port, handling 3m ferry passengers a year. The port employs about 2,000 people directly but accounts for an additional 2,000 jobs indirectly, the port estimates.

The port is important for full-time students, a large cessful municipal port in the man, Portsmouth commercial port manager.

sion to its freight facilities, costing £13m. which increased the port's area by marketing about 30 per cent.

Many companies, too, have heen attracted by the technical marine skills that Ports-Portsmonth is home to mouth's close relations with the Royal Navy have bred in the local population.

### Southampton: by Richard Adams Facing up to the problems

A number of projects are geared to halt the drift out to the suburbs

Where is the UK's largest inner-city ahopping project being built - London? Glasgow? Manchester?

Surprisingly, the answer is Southampton. The project is part of a ambitious plan to renovate the city centre of Southampton, and halt the drift out of the city by retailers and shoppers

In April this year the Department for the Environnt gave the go-ahead to the latest phase of the West Quay centre, a 1.5m sq ft multi-use development in the heart of Southampton.

The site's developers, Imry Holdings, say the final com-plex will be huit over 53 acres, making it one of the largest of its kind in Europe. They estimate its total cost to be around £250m.

If all goes to plan, tha West Quay project should be completed by the end of the century. Its devalopers and Southampton City Council hope the centre will reverse the town centre's declining ability in recent years to attract visitors.

In 1990, Sonthampton was ranked 22nd in a league table of UK market size rankings. But by 1994, the city had slipped to 32nd. behind Brighton and Plymouth. Southampton City Council says it hopes the development will attract 20m visitors a year, and create more than 3,000 lobs.

The developers point to the success of a similar venture undertaken by Imry in Leicester. Since the Shires mall in the centre of Leicester was completed in 1993. the city has attracted back many of the shoppers it had been losing to large out-oftown retail parks. The result was that Leices-

ter's catchment population

UK market aize to 19th. West Quay's chances of

success were boosted last month with the announcement by the John Lewis Partnership that it had signed up for a 265,000 sq ft department store in the complex. In property jargon, the large store will "anchor" tha shopping centre, by acting as a main attraction for visi-

The first phase of the project has been completed, with the construction of seven retail warehouses. They include the first purpose built unit in the UK for The Source, Sears' home furnish-

But until the centre is fin-ished some time after 1999, a fall in visitor numbers to the central city could cause worrving times for Southampton. For decades, the city has been the most prominent British port for visiting cruise-liners. However, with Dover soon to open a new £9m terminal for liners, the competition for the European tourist trade is hotting

This year Dover claimed to have 102 liner calls booked, two more than Southampton - possibly the first time Southampton has been over-

taken. Southampton's critics say that the port's cargo activities - including the UK's second largest container terminal - detract from its cruise business. But Southampton is still the home of Britain's most prestigious ocean liners: the QE2, Canberra and Oriana.

The port has recently extended its two terminals. and is unique in being able to berth the four biggest liners in the world at the same time. In total, Southampton will handle around 230,000 passengers, double the number of passengers using Dover this year.

port's cargo 1995 the docks bandled 10m tourism, marketing its historic maritime past

between it and P&O. The port currently has plans to expand down the western side of Southampton Water. The aim is to gain access to the deeper water channels on that side, allowing use of the harbour by

larger ships. Southampton's other transport links are also being developed. Southampton International Airport, four miles outside the city, was redeveloped by its owners BAA in 1994 and now

The airport has developed a close relationship with the Dutch airlina KLM, which uses Southampton as a link to its international "bub" terminal at Amsterdam's Schiphol airport. Other services include those to the

land Europe. In close proximity to the airport is the proposed Southampton International Park. The 72-acre development by Gazeley Properties. the property arm of supermarket retaller Asda, has initial planning permissioo for over 1.3m sq ft of office. industrial and warehouse building.

The developars bope to capitalise on the combina-

operations are thriving. In Tha Tower House in Old Portsmouth; the city is keen to promote

Oce local company currently making good use of those links is Ocular Sciences in Southampton. The soft contact lens manufacturer was one of this year's winners of the Queen's award for exports. Channel islands and main-

Central to many of the city's recent developments has been the work of Southampton City Council. The council itself is set to disappear on April 1 next year, when it will be replaced by a 🐧 new unitary authority.

As a unitary authority, the new council will combine the responsibilities of the old city council with those services, such as education and social services, formerly pro-vided by Hampshire County Council.

The new unitary anthority's budget will increase from £120m to £300m, while the council's workforce will almost triple to 6,000 employ-

The council was recently successful in attracting £26m in grants from central government, to regenerate the St Marys and Bevois Valley areas and tackle urban deprivation across the city. And in March this year the

city council was awarded one of the largest grants from the National Lottery's sports fund award for a single project - £6.1m to build an 8-lane swimming pool and leisure complex in the city

The facility will be sited on the edge of the West Quay redevelopment, where Rank Leisure is also planning a £25m cinema, sports and restaurant project.

But there is one piece of prime Southampton property that locals hope will not be up for sale: Southampton and England footballer Matt Le Tissier is valued at £7m, but Saints fans want him to remain a fixture in the city

Basingstoke Economic Forum, a private-public partnership body, commissioned Coopers & Lybrand and Jones Lang Wootton to prepare a report on ecoegy. It concluded that if council leaders and the pri-vate sector united behind a common economic strategy, it "will be eminently possihle for Basingstoke to 'Achieve the Breakthrough'

most economically success-Among the report's main

expenditure to other towns in the region. For example, a survey found that up to 40 per cent of Basingstoke'a potential retail spending is actually being spent in other centres. Overall the number of local businesses in Basingstoke serving regional needs, including

retail, fell by 11 per cent between 1987 to 1991, compared with an increase of 8 per cent in the rest of the south-east region. Basingstoke has fewer so-called "static" firms than

except Cambridge. The consultants' report found that the Basingstoke economy had an "exceptionally high degree of dynamism and vol-atility". More than 50 per cent of local employment is dependent on industrias described as highly "mobile" – telecommunications, pharmaceuticals, electronics and business services. Several of the sectors responsible for the impressive growth performance of 1980s are now declining in terms of prospects for future employment

 The image of Basingstoke in the eyes of the agencies which advise mobile inves-

tors is getting weaker. The report says this is in part due to the ageing of parts of the town's commercial property and fears that Basingthat Basingstoke suffers a of overheating. The threat of substantial "leakage" of disinvestment by mobila firms moving out of Basingstoke is "a very important one", the report states. In contrast to UK-wide

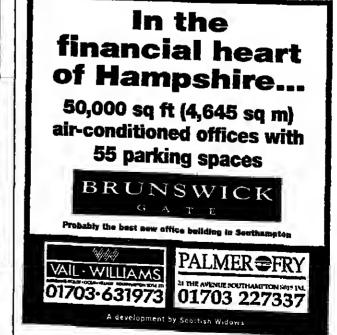

trends, Basingstoke maintained its level of manufacturing employment through the 1980s. Losses in engineering were compensated hy increases in electronics and other sectors. Also, the number of amall firms in electronics, engineering and paper products increased by almost 60 per cent between 1987 and 1991.

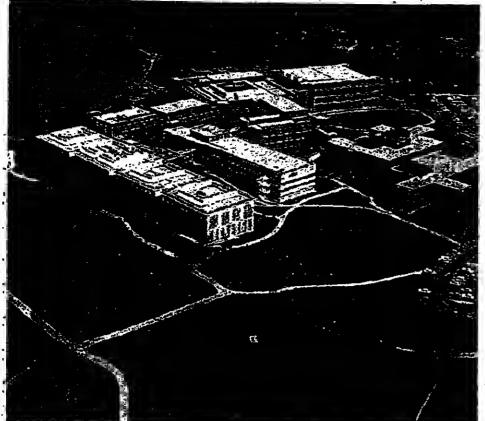

Recognising the need for developments suggested in the report, the Basingstoke and Dean borough is attempting to implement a 10-year plan spanning seven strategic economic priorities and targets.

Rohert Jolley, business development manager for the borough, says implementation of the plan is already under way. "The future is really amazing," he says.
"Over the next four years there will be an investment of at least £100m in the town centre". This includes a redevelopment of the town centre and a planned transport and technology museum. "This is really exciting place to be".

Ports and infrastructure: by Graham Bowley

### model of a modern county

There are two ports, two airports nearby, and good rail and road links

With the two great city ports of Southampton and Portsmouth on its long coastline, Hampshire has for centuries been able to boast of being the conduit through which much of the UK's traffic to the European continent and beyond has passed.

The county has also worked hard to develop a good network of road, rail and air links, including Southampton International Airport and Farnborough airport. These now provide individuals and businesses with quick access to neighbouring counties; they have brought London to within a hour and a half for most train travellers, which include hundreds of commuters each day; and they provide access to important continental airports such as Amsterdam and Paris.

Those within Hampshire who take pride in the county's location as one of its n attractions are quick to point out that Heathrow and business to destinations up and running by winter two years by the refurbish-Gatwick are each less than such as Cherbourg in France 1997, and which will allow ment of Southampton Interan hour away by road. Much is also made of the P&O European Ferries and

BRUNSII

ties, which provide a large educated workforce. And the county's high standard of "soft" infrastructure is another factor in its popularity; it has a developed fibre optic network which covers most large business locations and a number of small ones, and modern digital and electronic telephone

"For all these reasons, Hampshire has a very strong attraction as a location," says John Rees-Evans, head of economic development at Hampshire county council in Winchester

However, in spite of their long-tradition as two of the UK's biggest ports, Southampton and Portsmouth have still had to fight to retain their positions, as they come under pressure from competing cross-channel links, not least the Channel tunnel.

Both are going ahead with ambitious expansion plans, although one of these - in Southampton - is proving highly contentions. Portsmouth is the UK's

second busiest passenger and freight ferry port. It mainly handles cross-channel passengers and freight and Bilbao in Spain, with county's educational facili- Brittany Ferries as its main

ferry operators. It has a UK's second largest conlarge fruit and vegetable importing facility and handles most of the sea traffic between the mainland and the Channel Islands and the

Isle of Wight. Last month Portsmouth unveiled an 11 acre expansion to its freight port, costing £13m, which increased the port's area by almost a third. In its 20-year history, the port, which is wholly owned by Portsmouth city council, has grown from 4 acres to 40 acres, with £50m. of investment. More than 3m passengers and 350,000 freight vehicles used the

ferry port in 1994. Martin Putman, Portsmouth commercial port manager, says; "With growth in traffic of 20 per cent per year up until last year, we were nearing saturation point. We needed to ease pressures and to grow." He adds that the port "is important for the city. It is the only successful municipal port in the UK. The profit it makes goes into the city coffers, and it is important in terms of

employment." The next step in the port's kets," says Mr Putman. passengers direct access to national airport, which, is the nearby M275 motorway.

and Deane

tainer terminal and large refrigeration facilities, bandles 48 per cent of the UK's airport in Europe. More than half a million trade with the Far East and

is the main port for exports of UK-made vehicles. It wishes to develop port facilities on the western side of Southampton harbour on the edge of the New Forest, where deeper water channels would allow bigger ships to use the port. But these plans are running up against stiff opposition from people who fear the proposal's consequences for the local environment

The development of the ports is nevarthelees strengthening Hampshire's claim to be the UK's gateway to Europe, an important issue for Hampshire's local government whose attempts to portray the county as an attractive location for business revolve around portraying it as being one of the most closely focused on European markets.

Our port offers business in Hampshire a fast access to France and Spain and to these two countries' mar-

located 4 miles outside Southampton, with the Southampton. Following its

redevelopment, the airport anthorities claim it is now the most modern regional

passengers used the airport last year, with Amsterdam, Paris, Brussels, Edinburgh and Manchester among the most popular routes. The British Airports Authority forecasts that passenger numbers are growing by about 8 per cent a year and are predicted to reach 1m by 2005. The decision by the Civil Aviation Authority to build its new air traffic control centre at Hamble is a further boost to Hampshire's air infrastructure.

On a more local level within the county, there are plans for a £100m rapid transit system to link Portsmouth, Gosport and Fareham. The hope is that this would ease traffic congestion, boost tourism and leisure, and ancourage economic growth.

The challenge now for the county is to ensure that the steady economic growth and the expansion expected in the next few years, does not expansion is a film road net. This claim has been the existing infrastructure versity in 1952, it can trace work which is intended to be strengthened over the last and anvironment. The com- its birth back to 1862 and the pletion of the M3 motorway has strengthened links between the north and south of the county, and has made journey times more predictable. But the county authorities will wish to avoid the general bottlenecks that

Research and higher education: by Richard Adams

### Academics make a business point

University survey shows unexpected contribution to the county's economy

Higher education is big business in Hampshire - and research by the University of Portsmouth has shown it is also good business.

A research team from the university's Centre for Economic Analysis recently published an extensive survey of the impact the university has on the city of Portsmouth and its surroundings. The research, led by Prosor Richard Harris, found

that the university generated over £64m of spending within the local economy annually. It also estimated that for each member of staff employed by the university, just under two additional jobs ware created in the local economy.

The majority of the total comes from spending within the region on the part of the university'e 1,800 staff members and more than 9,000 students. For example, spending by staff who would not have lived in the region if the university did not exist, was calculated to be £31.4m; while student spending in

the area was around £33.4m. The survey estimated that 3,600 jobs - or 2.3 per cent of the local workforce around Portsmouth - were reliant on the university's presence.

Professor Harris says the survey showed the importance of higher education to county like Hampshire: The economic impact, as this study shows, goes far beyond local expenditure by the university. Portsmouth itself was a

polytechnic until the education reforms of 1990 allowed it to achieve university status. Since then, its student · numbers and research activities have grown to the point where it is catching up on its longer-established rival. Southampton University. But while its full-time stu-

dent numbers are similar although Portsmouth has a much larger number of part-time students - the former polytechnic bas some distanca to go to match Southampton's international reputation for research.

While Southampton place too great a pressure on · became an autonomous uni-Hartley Institution, founded after a legacy from Henry Robinson Hartley, an eccentric local wine merchant.

Earlier this year, Southampton received the highest possible rating for teaching quality in eight of its departments. Only four other universities received more top ratings from the national

The university is the largest single employer in Southampton, with an annual turnover of £125m. Its research spending alone is 270m. It is reckoned to be among the country's top 10 universities for research.

One of Southampton's acknowledged strengths is its research in marine science. That has been bolstered by the completion of the £50m Southampton Oceanography Centre in April this year.

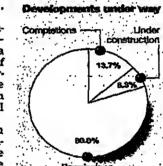

The centre is a joint project between the university and the Natural Environment Research Council, the UK funding body for arch. Based at Empress Docks, between Southamp-ton's twin rivers, the Itchen and the Test, the centre also houses the national oceanographic library and around 1000 students and staff.

The university hopes the centre will be further supported by a grant from the Millennium Fund to build Oceanarium 2000, a sciencebased visitor centre, in partnership with Southampton city council and the Met Office.

Like many universities, both Portsmouth and Southampton are keen to develop links with industry, and to help effectively exploit the fruits of their research. In 1989 Portsmouth formed the University of Portsmouth Enterprise Limited to market its expertise, while Southampton bas incorporated Southampton Innovations Limited.

Roger Ashby, managing director of Southampton Innovations Limited, says the company was formed to commercially exploit tha inventions of the university'e scientists.

"We are setting up commercial companies that we hope one day will get stock market listings, and the benefits can be donated back to the university to support fur-

ther research." Mr Ashby says. "This is a very innovative approach by a British university, but is a very practised programme in the

United States." Current research includes an environmentally-friendly cockroach trap to be marketed by a US company, Jeu-International. nique Research on the trap was done by biologist Dr Philip Howse, inspired by a study roaches lured into the trap by a scent find themselves unable to grip its sloping sides, thanks to electrostati-

cally-charged powder, and slip on to a sticky surface. The university will gain a minimum royalty payments of \$1m over 10 years from

But one Hampshire company has gona a step fur-ther, and opened its own business school. In the last 10 years. IBM UK bas built its own facility at Eversley to provide training for other businesses as well as its own staff. The IBM school has had links with Southampton University's business school, but now has a formal agree-ment with the Manchester Businese School to offer a three-year Master of Businees Administration programme. lBM's input includes a teaching staff of 18, supplemented by visiting lecturers, and an annual budget of £8m.

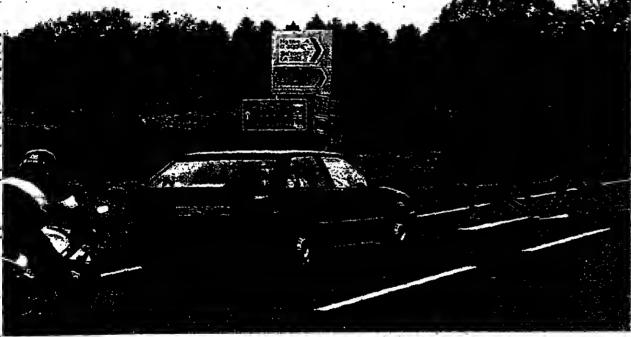

Other educational ventures in the region have not been so euccessful. The Southampton Institute of Higher Education, with 8,000 full-time and 4,000 part-time students, suffered in its attempts to market courses in Greece and Spain.

The Soutbampton Institute recently closed an outpost in Athens set up two years ago, after a failure to recruit students led to losses projected to be over £300,000. Earlier, the Institute was criticised by the Higher Education Quality Council, which said the control exercised by the Institute over its overseas courses was not "entirely safe and good practice".

The Institute offers undergraduate degrees validated on its behalf by Nottingham Trent University. It hopes to achieve full university status within five years, when it will call itself Southampton Solent University. And Portsmouth Univer-

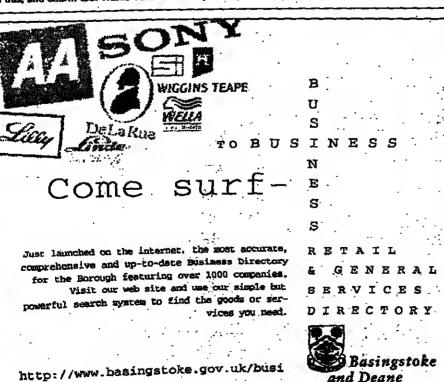

sity attracted media interest this year when a linguistics student was allowed to write a dissertation on Klingon, the fictional language spoken by a warrior race in the Star Trek science fiction television series.

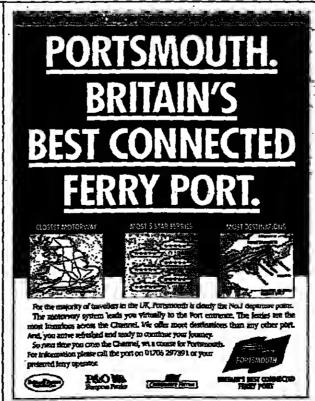

The news drew a swift response on the letters page of the Daily Telegraph: "It Is an insult to call upon the taxpayer to support such nonsense." The letter came from a Mr Cross.

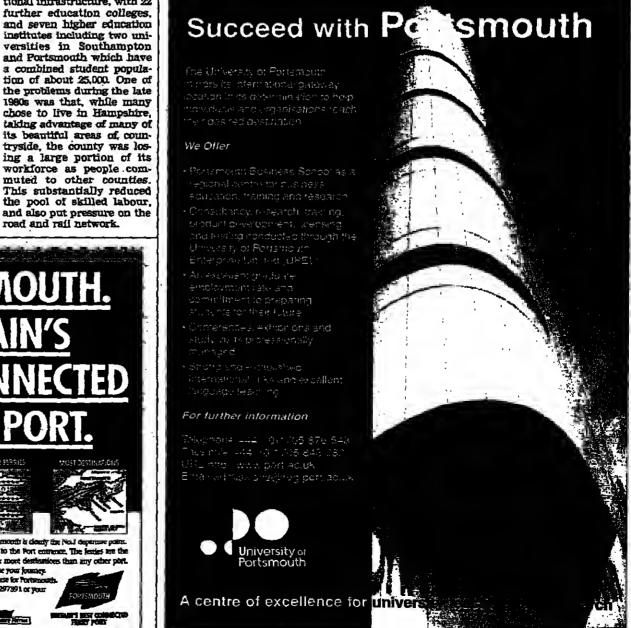

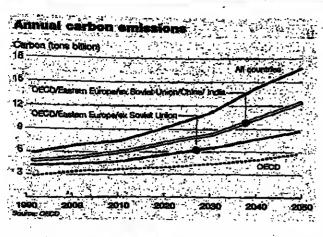

All this, and charm too. Traffic comes to a stop to allow a wild pony and her foel from the New Forest to cross e road

**Soint implementation:** by Leyla Boulton

### **Pragmatists'** idea fuels controversy

A look at the West's radical proposals to curb the emission of greenhouse gases

Western selfishness or cost-effective environmentalism? This is the main question banging over a radical solution for tackling global warming by transferring energy efficient technology from developed economies to developing or former com-

munist countries. The solution comes in two stages. The first is known as "joint implementation", whereby industrialised-world countries and companies can claim credit against national targets by reducing emissions of greenhouse gases in developing countries.

The second - a more sophisticated version of the first - consists of proposals for international trading in permits to emit carbon dioxide, the best-known green-

The rationale for such an approach is that it can be much more cost-effective for western nations to cut emissions in developing countries, where energy efficiency is relatively low and improvements are relatively

Mr Richard Sandor, a former vice-president of the Chicago Board of Trade, who launched US trading in sulphur dioxide permits and then went on to develop the idea of carbon trading, says for more pra environmentalism.

"It's time to take the environment out of the warm fuzzy area," he says. "You've got to work out how to solve problems in the most cost-ef-

fective way.' Joint implementation is already baing axplored through pilot projects advocated at last year's Berlin climate change negotiations.

One example is the US Centre for Clean Air Policy's project in the Czech city of Decin. The centre convinced three US utilities - Wisconsin Electric Power, NIPSCo Industries, and Edison Development to contribute \$300,000 each to the replacement of one of the city's five brown-coal district heating plants with a natural gas plant. Increased efficiency is achieved by switching fuels, installing energy control equipment, and introducing co-generation, which generates electricity as well as heating. The net result: a 6,000-tonne cut in carbon emissions from tha fuel switch, and a 20,000-tonne reduction through co-genera-

Other environmental benefits from the Decin project include the virtual elimination of sulphur dioxide pollution, as well as ash-waste from the plant.

In contrast, carbon emissions trading exists only on paper, although it would be closaly modelled on the existing US system for trading sulphur dioxide emis-

Joint implementation and trading are variations on the same theme. But a report by the United Nations Commission on Trade and Develop- global warming.

that the latter could prove more politically sustainable

"Any system which does not involve commitment from all nations is unlikely to be a final solotion." it says. "The rich countries would probably soon weary of a scheme in which only they were committed. On the other hand, the sys-tem...could be a useful stepping stone ... to tha

tradeable permit system Advocates of permit trading reject suggestions that it is a ploy to help rich countries wriggla out of making adjustments to their own

Mr Frank Joshua, UNCTAD's main advocate of carbon emissions trading, says a system could be developed that would initially give developing comtries a surplus of permits and developed nations a defi-

By enabling Germany to buy extra permits from Guatemala for cash or more efficient technology, such a system could help developing countries curb emissions while reducing the overall cost of achieving a net reduction of greenhouse gas emissions (see example, below).

In order to achieve such a net reduction, the overall

#### A permit trading system could be run by a UN agency

amount of permits issued would also be set to correspond to the level of emis sions the world decided it wanted to achieve UNCTAD, which makes no secret of its search for a new mission, suggests that an international trading system could be organised by a spe-

cial UN agency.
But it would be run like a self-regulating commodity market with supervision by the UN body, governments and the private sector.

Permits would be allocated ria, which could include a country's level of emissions population levels and relative "cleanliness" of produc-

Some critics see the trade able permits idea as too complicated ever to get off the ground, and prefer strict national reduction targets for individual countries. Scandinavian nations, for instance, are already wedded to carbon taxes, which have been rejected by the US.

Given such disagreemen joint implementation, followed by tradeabla permits, an option promoted most actively by the US, may prove the most promising framework in the long-run. Nothing in that framework would preclude individual countries from adopting their own domestic tools including taxation - to encourage greater energy efficiency and the development of other solutions to

#### How the Ji figures stack up

mess of emissions traditio is Restrated by a simple numerical example: Ima there are just two countries, such producing 100 tonnes of carbon dioxide a year, in a world that aims to reduce total emissions to 100 tonnes from 200 tonnee. The costs of reducing emissions to country A are \$6 per torne of carbon dioxide and \$10 per torne for country B. If each country reduced its output by 50 tornes, the cost would be \$300 plus \$500, that is \$800. But through trading, the two countries could vary their emissions, providing the total did not exceed 100 tonnes. They could trade emission permits so that country A cut output to 25 formes and country B to 75 tonnes.

In this case the total emission reduction costwould be \$450 plus \$250, or \$700.

The International institute for Energy Conservation

### Making the kindest cuts

The IIEC wants countries to associate energy conservation with economic growth

The International Institute for Energy Conservation funded by governments and multilateral organisations. aims to help private sector companies break into emerging markets for nergy efficiency.

Headquartered in Washington, with offices in London, Bangkok, and Santiago. the IEC is also keen to maintain its reputation as an "honest broker" in fulfilling its main mission. That is to help developing

countries and nations in transition from communism to capitalism invest in energy policies that are good for both their economies and their environment As its US government funding falls off, it is keen to increase its own sources of revenue. It already

requests and receives ad hoc

contributions from energy-

control companies such as

now considering asking for a percentage of any deals it helps companies clinch in selling energy-efficient goods and services.

With an annual budget of \$3m and a worldwide staff of 50, the IEC has considerable amounts of intelligence on the domestic markets of the various countries where it does business. Mr Russell Sturm, presi-

dent of the IEC, says its activities range from helping developing countries to ess energy efficiency and renewable energy technologies to working with companies anxious to break into those markets. Among its achievements,

claims some of the credit

for Thailand's adoption in

1991 of a national electricity conservation plan, the first to be established by a developing country. In 1989, it opened en office in Bangkok to cover South East Asia. Having built up strong local contacts, it was then in a position to help

institutions ranging from the National Energy Policy Office to the Electricity Genthe IEC. erating Authority of Thai-

Similarly, its office in Santiago, which covers not just Chile but neighbo countries, is trying to help Chilean engineering compa-nies turn themselves into

companies that instal energy efficient technologies and repay themselves from some of the savings made. Chilean projects it is involved in include plans for

an executive bus service to ferry drivers of single-occupancy cars to work. The project's aim is to reduce both urban smog and carbon dioxide emissions. Obstacles to its efforts

include difficulties raising finance for relatively smallscale energy efficiency projects from a financial sys-tem that is skewed towards bigger projects. Another is getting energy prices to reflect the costs of environmental degradation.

International negotiations to reduce emissions of carbon dioxide, the best-known greenhouse gas associated with global warming, are a particularly promising

The organisation is, for

■ Tourism and the countryside: by Richard Adams

## Welcome to Jane Austen Country

Visitor numbers get an unexpected boost from the latest fashion on the big screen

The popularity of the novels of Jane Austen, the most famous writer born and bred in Hampshire, has never been higher, bringing in its wake an economic boom for Hampshire's countryside.

The success of recent screen adaptions of her nov-els, including Pride and Prej-udice and Emmn in both spring. The changaover is likely to mean a relocation Britain and the US, has been eagerly capitalised upon by Hampshire County Council. The country has been dotted with new road signs, wel-coming drivers in the north of the county to "Jane Austen Country".
This year the council has

produced a glossy brochure for tourists, detailing the areas of the county where the writer and her family

The council has also done its best to bring Jane Austen's county to a modern audience, by setting up a Jane Austen Hotline telephone number ("Hello, this is Jane Austen, thank you for calling my hotline..."), and even a home page for

her on the World Wide Web. Those activities are likely to boost the county's tourism trade, already a big industry in Hampshire. Over 16m visitors passed through last year, and the tourist industry employs 42,000 peo-

Jane Austen is not the only attraction, nor is she the only famous writer connected Charles Dickens was born in a house in Portsmouth, which is now a museum, while the poet John Keats wrote Ode to Autumn in Winchester.

western side of its harbour,

by the edge of the New For-

The New Forest remains one of the great delights of the county, dating back to William the Conqueror's naming of the Nova Foresta as the first royal reserve in

But for Jane Austen's fans, the past is another county. Those wanting to retrace the steps of Jane Austen's life, which she spent almost entirely within the county, will focus on Winchester Cathedral, where the red brick house at Chawton, near Alton, where she lived from 1809 until 1817.

The little house at Chawton, now a museum, remains genteel despite the arrival this year of double the number of sightseers. At Winchester Cathedral, times have changed since the mid-19th century, when a warden asked visitors to her grave: Was there anything particular about that lady?"

Many of the tourists attracted to the county by Jane Austen are from the US, which was the origin of one of the few pieces of fan mail sent to her.

In 1852, her brother Sir Francis Austen received a letter from Boston describing his sister's writing as second only to Shakespeare.
"It may not be uninteresting to her family to receive an assurance that the influence of her genius is extensively recognised in the American Republic." the writer sald, before asking for an autograph.

Even now, at Chawton, many of the exhibits in the Jane Austen House bave been donated from the US. The popularity of her books on screen, however, means the village is receiving more and more visitors from within the UK.

■ Defence diversification: by Jane Martinson

### Marching to a new drum

After 200 years of military history, the transition period is

proving painful

John Rees-Evans at the local county council believes Hampshire is unique. "We anywhere in the world that has been home to the three armed forces," he says.

A military history spanning more than two centuries has left the southern county with a weighty legacy in this post-Cold War era of defence spending cuts.

any other county in the UK, according to York University's Centre for Defence Economics. It ranks in Europe's top 10 defence-dependent

University and government research has estimated that 20 per cent of the county's workforce is either uniformed military personnel. in the civilian sector of the Ministry of Defence, or in a range of related industrial

With more than 500 local companies involved in defence markets, the county also has an unusually large proportion of big employers, including large suppliars such as Vosper Thornycroft, GEC-Marconi, and British Aerospace. Up to 80,000 people are employed in such companies, according to the local Training and Enterprise Council and governments reports.

All three armed services have large bases in the county, Aldershot is the UK army headquarters, the navy has a base in Portsmouth and the Royal Afriorce is at Farnborough.

Latest figures suggest the county lost 13,000 defence-related jobs between 1989 and 1993 - between 1990 and 1993 there was a 13 per cent drop in military personnel. Mr Rees-Evans, head of eco-nomic development for the county council, says recent MoD announcements and consultation papers suggest 6,000 more could be lost before 1998.

"The huge continuing cuts in numbers of people in uniform has a knock-on effect in terms of housing, skills and spending in the service sector," be says. While losses in related industries are hard to estimate, the council believes the sector has declined by about 7,000 jobs. The picture is not all bleak. The county retains a

appropriate box(es)

is relatively low. The decision by Thomson-Thorn, the defence electronics manufacturer, to relocate to Basingthe county is continuing to attract some defence-related inward investment.

the need to diversify has become acute. This is particularly the case in the southeast and north-east.

Neil Homer, strategy policy officer at Gosport borough council in the southeast, says a third of the area's workforce is employed Hampshire relies on in the armed forces, while a defence spending more than further third depends on this population for spending in the local economy. In the last 10 years the number of military jobs has more than halved. In spite of the ability of the highly skilled civilian workforce to find work in other parts of the county, the changes have still led to unemployment of about 8

> has also exacerbated transport problems for the dis-trict, which occupies a pen-

> The MoD has designated more than 600 ha of land to be decommissioned in Hampshire in the near future. Of this, 650 acres is in Gosport, representing 10 per cent of its area. Such land presents particular problems for developers, including access contamination, listed building status constraints and location in environmentally sensitive areas.

In Gosport, the problem

This perspective includes the need to address the "brain drain" caused by increased commuting, by using the land for office and industrial space and not housing, which is in greater demand. In spite of this, Priddy's Hard, an 18th century ordinance depot, will partly be used for homes and

dency on defence, the county has focused on increasing tourism and adapting its skills to commercial applications. In the past two years Hampshire council has applied for a total of £2.9m from Konver, a European Union initiative to support defence diversification. About £1.5m relates to tourist developments in the area and will be used to convert some of the listed buildings into heritage museums for

The rest aims to help the local population retrain or adapt their skills. Mr Rees-Evans says: "Very few companies are now 100 per cent dependent on defence. What's happening is that everyone is trying to shift the industry just slightly from military applications to civilian ones

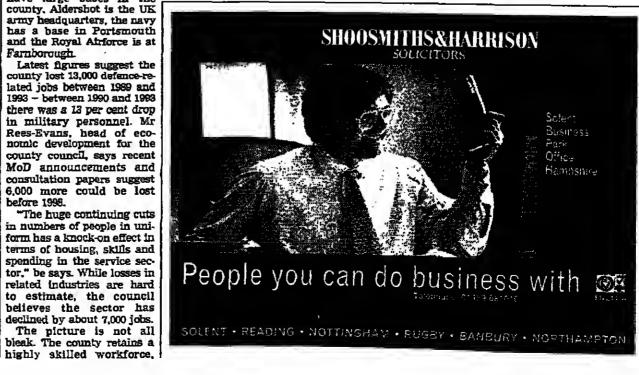

The Farnborogh New

and overall unemployment has been exacerbated Technology Centre, part of this trend, is to create a series of small high-technology workshops linked with same time. Bill Cooke, head of economic development at Rushmoor borough council. saysthe aim is to encourage the small units to apply some of the defence breakthroughs for commercial use. "In the past some of the spin-offs from the breakthrough technology which have come out of Dera have ended up being developed abroad without any benefit to the area," he says.

In making its applications for funding, the county council is keen to emphasise the need for what Mr Rees-Evans calls a "big cultural change". Many companies in the area are able to produce extremely high-quality, highly regulated material with short-term production runs. The new emphasis must be on "commercial quality" and longer produc-tion schedules, he says.

After being dominated by two centuries of military history, however, Hampshire is not going to change over-night. Mr Homer at Gosport says: "Ideally, in the next five years I would hope to achieve an increase in new non-defence-related jobs. But it will probably take the best part of 10 to 20 years to refigure any part of the equa-

Wind power: by Leyla Bouiton

### ream farm hides sad truth

until it becomes fully com-

The British Wind Energy

Association argues that

building a new farm is

already more economic than

developing a new coal-fired

or nuclear power station. Such advocates say the

process of establishing wind

power as a real alternative

would accelerate if the UK

government set a more

demanding target for renew-

Given that renewables

already account for 2 per

cent of UK energy supplies,

petitive (see table, right).

Windfarms have yet to be accepted as a viable alternative to fossil fuel plants

When Europe's biggest windfarm was opened by National Power, the UK's largest electricity generator, last month it was hailed by Friends of the Earth as "an environmentalist's dream coming true".

But in general terms that dream - one of lots of renewable energy sources that create little waste and cause little environmental damage is far from a reality.

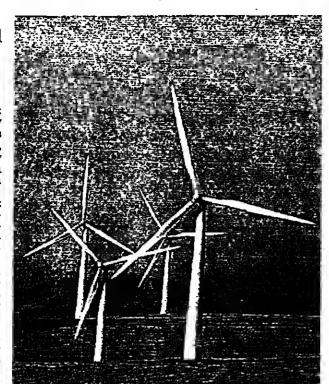

In most of the world, wind power is still not seen as economically viable and remains dependent on subsidies and other official forms of encouragement.

"If we were to forget about environmental considerations, nobody would build a wind farm unless they had a particular reason to be enthusiastic about it," says Mr David Porter, chief executive of the UK's Association of Electricity Producers

Mr Porter concedes, however, that in some situations wind power is already the energy source of choice and not for environmental reasons

Some developing countries, for example, do not have their own oil and gas. They find nuclear power too expensive and need, also, to supply remote communities with electricity.

Snpplying electricity to 25,000 households, National Carno in Wales, however.

was made possible only thanks to subsidies from the UK government's Non-Fossil

Fuel Obligation (NFFO). This is a levy on electricity consumers designed to encourage renewables, ranging from small-scale hydropower to wind and solar

NFFO subsidises the price of electricity from alternative sources in order to make it competitive with electricity generated by fossil fuels.

Advocates of wind power say that its costs are coming Power's £26m wind farm at down all the time, and that these will continue to do so the government's present

target of 1,500MW capacity of picking a supplier of wind or 2.5 per cent by 2000 is not generated electricity. exactly ambitious.

The BWEA wants the UK government to stipulate that a third of its 2000 target be met by wind energy. It wants 5,000MW of wind energy capacity in place by 2010, or 4 per cent of present UK electricity demand, crowned by a 2025 target of 10 per cent.

While omitting to mention that the country has its own access to cheap reserves of lost in transmission, not to oil and gas, it says that mention other costs associ-Britain, with "40 per cent of ated with the UK's main-European wind resources" stream distribution grid.) lags behind Germany, Denmark and Holland, despite the fact that they have far less potential for wind

It adds that its targets could cut unemployment and henefit trade. It estimates that achieving its 10 per cent target for 2025 could, for instance, create at least 13,000 new jobs, as well as build a strong domestic market that could, in turn, enable Britain to take advantage of future export oppor-

Environmentalists also believe that growing con-cerns over climate change and other environmental problems will strengthen the case for renewables.

While some are concerned that the liberalisation of the UK energy market in 1998 will further undermine the rationale for developing more expensive alternative energy sources, others see it as opening up new opportunities for renewables. Allowing consumers to

choose their electricity supplier means that in theory they could have the option

**Petroleum:** 

The AEP's Ms Nicola Steen saya a level playing field could be created for renewable energy generators by ensuring that they will be "paid for the economic benefits afforded by their position on the electricity grid."

(The fact that renewable energy projects tend to be located in local networks means they are usually spared the cost of electricity

Writing in the latest issue of Powerhouse, a publication of the Parliamentary Renew able and Systamable Energy Group, Ms Steen noted that even now studies show some consumers would be willing "to pay an extra few pounds to know they are supporting renewable energy projects".

"Many people would see the addition of a premium of, say, a seventh - perhaps £10 on their quarterly bills as a cheap investment for their grandchildren," ahe

Meanwhile, the obstacles to renewables remain. Some believe that there will never be a level playing field until the price of energy from fossil fuel sources fully reflects the costs of environmental

In the UK another impediment to the development of wind power has been a peculiarly British outcry against its disfiguring effect on the landscape. Local authorities are believed to have turned down three-fourths of applications to build wind farms, usually for aesthetic rea-

Energy saving companies in eastern Europe: by Leyla Boulton

### The \$500m plan for saving money

The EBRD wants private investors to help the former communist bloc cut energy waste

The European Bank for Reconstruction and Development likes to claim that it is the only bank in the world with an energy efficiency

True or not, the bank is using that team to try to help eastern Europe forge a win-win strategy on energy efficiency.

Accustomed to cheap supplies and abundant waste under its communist past, the region offers vast scope for saving money on energy

The bank reckons that allin-all, eastern Europe, where the opening of a window is often the most effective thermostat, could annually save the same amount of energy as a handful of west European countries consume in a

To prove the point, it cites . statistics suggesting that in 1992 the amount of energy required to produce one unit of GDP in eastern Europe was three times as great as in western Europe.

The EBRD is focusing on the establishment of escos energy savings companies as its main tool for encouring investment by the private sector in energy effi-

Escos make the investment in energy saving equipment and install it, sparing the client any upfront expense, and then recoup their investment by sharing the savings made with the

Mr Clive Bates, of the International Institute for Energy Conservation, a London-based lobby group, notes, however, that there are two main obstacles to

One is the danger that companies that exist today might not tomorrow under the impact of economic restructuring. The second is that subsidised energy prices

remain even lower than in the west and therefore the incentive to invest is not as high as it might be. But Mr Peter Hobson, the EBRD's principal banker for energy efficiency, describes esco investment as "a one-way bet" in so far as if "energy prices go up, the savings go up, too."

As for the problem of which clients to plck, Mr Hobson says that there are "plenty of good well-managed companies" in the region, despite a misleading perception in the west that virtually all business in the east is "on the brink of disas-

Potential "clients" range from public sector schools, hospitals and district heating companies, to private sector businesses. "The sky's the limit because everybody uses a lot of energy," says

Mr Hobson But paradoxically enough. because of nervousness about the stability of private aector companies, Mr Hobson says "there is a trend for escos to be more comfortable with the public sector - hospitals are not aupposed to

The hank's mission is to act a catalyst, encouraging private sector investment that would not otherwise be

Typically, it puts up a third of the money for projects, with private compa nies investing the rest. Options for payment range

from "an agreement whereby cash flow from the client will go through a bank or an escrow account to securing it with some form of collateral."

However, Mr Hobson notes that while "local banks are not eager to lend on the basis of future energy savings", even western banks "don't understand this type of risk analysis. They're still very conservative and

cautious" The EBRD's first loan for an esco was \$5m to Prometheus, a Hungarian energy service company taken over in 1992 by Compagnie Générale Compagnie Générale des

This was followed last week by the signing of a bigger \$50m facility - combin-ing debt and equity - to Générale de Chauffe to expand further its energy saving activities in Hungary and other East European markets such as Slovakia.

Under the agreement, Générale de Chauffe is due to invest another \$100m in the project unless it finds other investors to take part.

Also up for possible agreement this month is a \$90m EBRD facility to help Landis & Gyr of Switzerland establish four regional escos for Poland, Hungary, the Czech Republic and Slovakia, The EBRD's overall aim is

to mobilise around \$500m over four years for esco investments - including \$150m from its own funds, It says it is in negotiation with leading western energy-control companies, such as the US-owned Honeywell Europe, which see esco projects as "the only way of cracking the eastern European market"

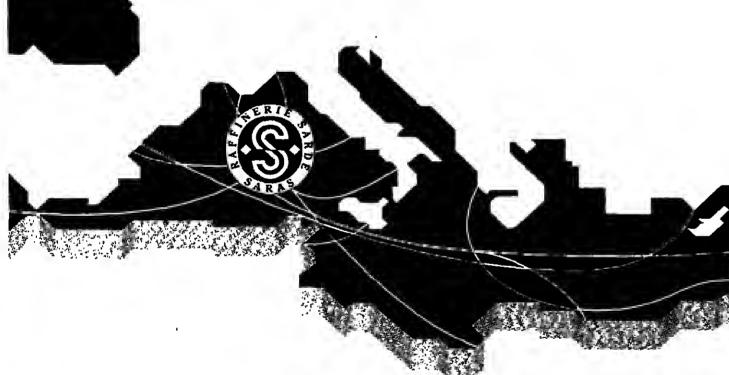

Despite the difference in scale of the problem posed by energy inefficiency, analysts such as Mr Bates point out that many of the obstacles to greater energy efficlency in eastern Europe are similar to those that occur in

While the economics of energy efficiency may "stand up very well", he says not all companies have a sufficiently strong incentive to make the investments, while market entrance barriers for energy-saving companies

tend to be high. In addition, Mr Bates says that while some bigger companies or at least energy-intensive ones in the west are making considerable efficiency gains, "the difficulty in the commercial sector is that energy typically is a small part of costs ... 4 to 5 per cent".

This means that unless "companies are massive, it is difficult to get them to de Chauffe, a subsidiary of focus" on energy efficiency.

# our goal

The middle of the Mediterranean Sea is the crossing point of the major petroleum routes. These routes are centered on Sardinia where, located in Sarroch, is SARAS, one of the prominent European Refineries. And finally, in the center of Saras is our goal: you, with your problems, your markets, your petroleum.

For the processing of your crude oil, and for rendering all services you may require we can offer a crude refining capacity of 16 million tons/year. Our Reforming. Cracking, Alkylation, Desulphuration, Visbreaking and Hydrocracking plants offer a conversion capacity of 5.5 Million Tons/year; the storage capacity ranks to 4 million cu.mt.; our marine facilities are designed to handle vessels up to 260,000 DWT. Our overall operation area is of about 3,000,000 sq.mt.

But most of all we can offer an effective and efficient cooperation in solving all problems connected with toll processing, keeping in the very center of our mind your requirements. This has been our work pattern during the past thirty years of activity: we have explored new opportunities, built plants with full respect to the environment, we have granted our customers the most advanced services. Summarizing we have worked with the interest of who, from the very beginning, has had a center goal: petroleum.

■ Solar power: by Andrew Baxter

## Too few photo opportunities

High costs still make it difficult for the solar energy industry to fulfil its potential

Like other renewable forms of energy, solar power generates as much controversy as it does heat and light, and at present does not make a hig contribution to energy effi-

As Greeopeace points out, energy from the sun is clean, renewable and so abundant that the amount that the earth receives in 30 minutes is equivalent to all the power used by humankind in a year. in the UK, it says, the amount of colar energy falling on hulldings could meet almost two-thirds of electricity demand.

Yet the world market for solar power remains small. increasing the light-conver-Only about 70MW-80MW of sioo efficiency within the photovoltaic (PV) cells - the most important element of of a thin layer of silicon solar electric technology were produced last year. enough to power one small

It is not for want of trying. Hundreds of millions of dollars have been spent by the solar power iodustry over

support of government programmes. Consequently, the total cost of PV systems has fallen from tens of thousands of dollars per watt in the 1960s to about \$6.

Yet, as Greenpeace confinancial costs and benefits of solar power shows that a unit of solar electricity still costs between four and 10 times as much as a unit of conventional electricity.

Reducing the cost of solar power is a priority. However, according to Mr Eldon Boes, head of the US National Renewable Energy Laboratory's Washington office, there is no single cost-per-watt target that needs to he It is more a question of

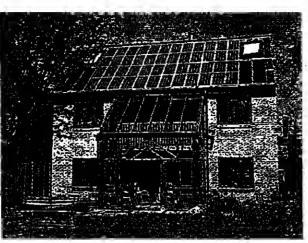

whittling down the cost of solar power in general, Mr Boes and other industry officials believe. This involves cells, which normally consist semiconductor msterial; building better and more efficient solar collector modules and arrays; cutting manufacturiog costs by developing better production processes and techniques: and improving so-called "balthe past 30 years, with the snce-of-systems" compo- alised West.

nents - the batteries, mount ing structures and power conditioners that enable PV power to be used properly.

In terms of megawatts of PV cells supplied, the solar power market is now growcedes, analysis of the full ing st s healthy rate of 15-20 per cent a year. But it is developing from a small base, and energy efficiency is not a factor - or at any rate is not the most important factor - in some of the most promising epplications. For instance, solar energy is well established in industrial applications such as telecommunications, pipeline protection navigational aids and offsbore oil platforms where electricity from the grid may be unavailable or

> Similarly, as Intersolar Croup, the UK's only manufacturer of PV cells, points out, the fastest-growing sector for PV is rural electrification, where the systems are used to provide power to offgrid villages, households, farms, hospitals and local industries. Intersolar says there is a great need for lowcost devices to bring electrification to rural communities - from developing countries such as Indonesia to remote areas of the industri-

impractical.

Across Europe, there are everal projects that show that energy efficiency can become s prime motive for installing solar power, which can then provide a more or less self-sufficient, "green" alternative to grid electricity from a power station.

In the UK, the Oxford Eco House, a detached house in the northern part of the city, has 48 solar panels incorporated into its south-fecing roof to generate electricity, along with several others for beating water. By using pas-. sive solar design principles

(designing the house to catch as much of the sun as possible), high levels of insulstion and low-energy domestic appliances, the Eco House can claim to he a "zero-energy huilding". Any extra electricity that is needed from the grid during the winter or at night is compensated for by the surplus PV-generated power the house sells to the grid dur-

A much larger solar electric project has been built this year in Amsterdam. The Nieow-Sloten development

integrates solar panels producing a total of 250KW into the roofs and façades of 71 houses, although it is expected that the system will provide enough electricity to meet the annual needs of 100 bouses. As with the Oxford Eco House, the performance of the system will be closely monitored.

The solar energy industry and its supporters believe governments can help promote such energy efficiency schemee. Backing for research and development research and development Fuel Ohligation, which sub-can help reduce the cost per sidises electricity produced PV systems.

watt of solar power, as shown by recent experiences in the US, but e whole range of market-based initiatives including subsidies for hullding solar power projects and premium rates for the solargenerated electricity fed back into the grid, have been introduced in continental Europe, Jepan and else-

in the UK, the solar industry has been pushing for PV power to be included in the government's Non-Fosell

from renewable sources One other strategy is suggested by Mr Allen Barnett of AstroPower, the US solar power company. US for their attraction to new technology, he notes, but are not buying roof-top PV Apart from the high cost, the difficulty of integrating the systems with the grid and measuring the energy produced may be deterrents. So it is essential that the indus-

■ Nuclear industry: by Simon Holberton

### Hopes rest on changing reputation

The Green lobby, once the scourge of nuclear power, could help reverse its decline

Talk to executives in the nuclear industry and you detect a growing optimism. "There is a mood out there that nuclear is coming back, even though there is no need to huild more power stations yet," says Mr Roger Hayes, director-general of the Brit-

founded on a paradox. The environmental movement, the industry's Nemesis in the 1970s, is now seeo as its saviour. The prospect of global warming and the fact that nuclear power plants produce no greenbouse gases augurs well. Industry advocates believe.

Voices also can be heard bemoaning the rate at which the rich world is consuming fossil fuels, and also warning of the political and strategic risks the west runs by becoming over-dependent on these fuels. Look at Russia today and the Middle East as it might be a decade from now, they argue, and a prudent energy policy demands

a rolc for nuclear. The need for conservation, dependence oo fuels that lie in unstable parts of the world: these are the twin strands of the argument for hringing nuclear hack in from the cold.

"We cannot solve the next energy crisis," says Mr Mark Baker, chairman of Magnox Electric, the state-owned nuclear utility that generates 8 per cent of Britain's electricity. But we can help with the ooe after."

Such optimism is a far cry from the realities of today. "I don't think anyone does anything on the basis of environmental coosiderations," says Mr Steve Thomas, senior research fellow at the Science Policy Research Unit, University of

Sussex. "If it were a close-run thing on the economics of nuclear versus other forms of geocration, then environmental considerations might help it. hut it is not."

A 1,000MW gas-fired plant today costs in the region of £400m and takes less than two years to bulld. By comparison, a nuclear plant of a similar size would cost botween £2bn and £3bn and take up to eight years to build. For this reasoo alone. the nuclear industry in the west is in a state of

long-term decline. At the end of 1995, there were 437 nuclear reactors in operation throughout the world. They met 17 per cent of the world's need for electricity and supplied 6 per cent of the world's total eoergy consumption.

But growth in installed capacity had slowed to a crawl. Only four plants came into operation last year and their geographical distribu-

tion tells a now familiar tale. The concentration of new build is taking place in the newly industrialising countries of Asia, such as India and South Korea, and Ukraine.

One station came on line in the First World; that was Sizewell B. However, its connection to the UK grid was not taken as an indicator of the future, rather it was seen as a marker of where the UK's civil nuclear programme got to hefore the boom was lowered. Slmilsh Nuclear industry Forum,
Britain's nuclear lobby.
The reason for optimism is

Larly, the proposed merger of CEC Alstom and Framatome, the French nuclear equipment manufacturer, is a move that has been hrought about by the contraction in the nuclear market - an attempt to pre serve a skilis hase rather than the creation of econo-

> mies of scale. Asia is spoken of as the only growth area for nuclear power. Taking a closer look, however, it is China and South Korea where most promise lies. This is especially true of the former where the nuclear programme has the personal

A large business is now to be had in waste management

backing of the prime minister, Mr Li Peng. China currently has only three nuclear reactors producing electricity. It hopes to have another eight in operation hy the end of the cen tury and to have installed ouclear capacity of between 40GW and 50GW by 2020.

Elsewhere, plans by Indonesia and Thailand to develop a nuclear industry have met enviroomental oppositioo before one clod of earth has heen moved. In Taiwan, the industry faces fierce opposition io parliament.

With the outlook for new plant bazy the industry is concentrating on managing with what it has. This has given rise to ouclear geron tology: the development of techniques to extend the lifetime of ageing nuclear plant. Companies such as British Nuclear Fuels and Cogema of France, are evolving into the morticians and undertakers of the industry. A large husiness is now to be had in waste management, decommissioning nuclear plants, and the safe storage

BNFL expects that the entire clean up of former nuclear sites operated by the US military could eventually cost in the order of \$200bn.

of the kit left over.

The nuclear industry to the west knows that it cannot afford another Chernobyl. "One more of those and we really do have a problem." says Mr Baker. "That's why we're providing so much assistance to the former eastern bloc countries."

You may call it napping. I call it conserving energy.

As a major supplier of energy, we know precisely how precious such resources will be to the next generation. That's why for ten years now we've been working with Neighbourhood Energy Action on energy efficiency projects. These are aimed to benefit both the environment and those who can least afford to waste energy in their own homes; and not just in Conservenergy week, but every week of the year. So you see, when it comes to saving energy, we're not sleeping.

Although the industria-

lised world accepts prime

responsibility for the prob-

lem, its efforts could soon be

made irrelevant by increased

emissions from fast-growing

particularly clear in the fall in the cost of renewable energy sources, which can be classed as part of energy efficiency in the widest

Subsidies are raised through levies on electricity producers and consumers, to boost both energy efficiency in the narrow sense and But Offer, the UK electricity regulator, has made no commitment to perpetuating

Against this background of disarray in the industrialised world, obstacles in national reduction targets poorer countries may seem

even more daunting. The International Institute for Energy Conservation, a non-profit making organisation that seeks to promote energy efficiency in the developing world, says the international financial system is skewed against

which invest in energy effi-ciency projects and then energy efficiency projects. This is because individually the projects are smallscale, even though considered collectively the market

potential is very large. Crucial to tackling global warming will be the developed world's imagination in helping other countries improve energy efficiency.

Asia: by Frank Gray

## Jew progress in power struggle

Outside agencies are helping Asian governments solve huge output problems

Energy efficiency has now come to the fore in Asia's fast-growing electricity supply sector. The region's energy ministries and plan-ners have discovered that economic growth is not dependent just on more power-generating capacity but also on more efficient delivery of output.

As a consequence, more countries are shifting their focus to energy transmission and distribution at one end of the scale, and the production of more efficient air conditioners, refrigerators and light bulbs at the other.

The shift stems from

chronically huge losses in power transmission. Supply ses of 25 per cent to 30 per cent are common throughout the region, notably in south Asia. A senior aid agency official says that the figure is as high as 65 per cent in India - 30-35 per cent in technical losses and thaft and a further 30 per cent in failure of the billing pro-

"Consider that the remaining 35 per cent that is transmitted, and for which billing takes place, is beavily subsidised and you have nothing that remotely represents a commercial operation," he

Throughout the 1990s, the Asian Development Bank, the World Bank and various bilateral aid agencies have been pushing for privatisation of electricity for three

 to boost power supplies in a part of the world where the per capital ratio of supply to demand is only 1:10. On the west, in comparison,

repay themselves out of cli-· to relieve project development funding pressure on The opportunities to gentroubled national treasuries: erate new business in ener- to encourage the developgy-efficient technology, with ment of a commercial mentality that will lead to the so much official help on level of energy supplies com-monplace in the west. offer, are a powerful incentive for far-sighted busi-The development banks for power thieves.

and agencies recently turned their attention to transmis-sion and distribution. In some cases, such as the Philippines, they found that private sector power generators were being installed without provision for new power

In Pakistan, the government's privatisation programme, which has seen financial agreement on 16 independent projects, is now focusing on the eventual sell-off of area electricity boards (AEBs). The US Wing group was recently awarded a management contract to run the Lahore and Gujranwala AEBs.

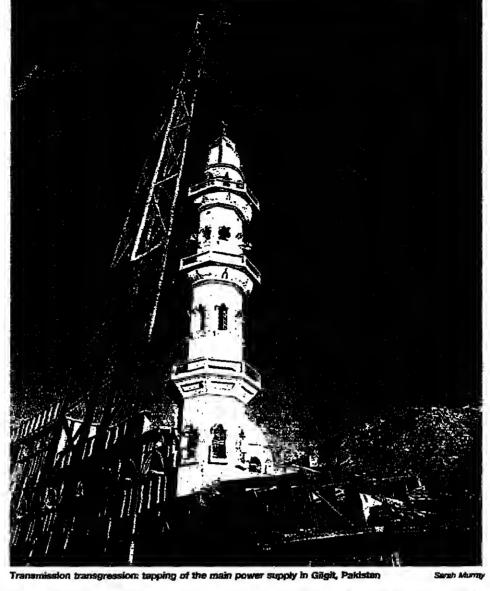

Government officials say the main reason for selling AEBs is to control corruption, power pilferage, line losses and general inefficiency - all of which dramatically reduce output and mean there is little income available for reinvestment.

In India, tha New Delhi government is drafting legislation that would allow state electricity boards to be divided into generation, transmission and distribution companies to enable them to operate more efficiently.

Delhi would like to see the more than two dozen state electricity boards operate like the private sector Bombay Suburban Electricity Supply company, a profitable and expanding power distribotor whose electricity losses are a fraction of the state boards.

India's problems are highlighted by the fact that of 83,000MW of installed capacity, just 53,000MW is available, while demand stands at 73.000MW. If all plant operated efficiently, there would be no need to add new capac ity to make up the difference, officials point out. A more finely honed

approach to electricity efficiency, known as Demand Side Management (DSM), is taking root in parts of southeast Asia where electricity theft and technical losses run at 15-20 per cent. Indeed, the Manila government last vear introduced punitive fines and prison sentences

The DSM programme centres on the International Institute for Energy Conservation (IIEC), whose Bangkok office has belped focus government policy on the consumer end of the market (see story, page 3).

Under IEC prodding, the Electricity Generating Authority of Thailand (EGAT), the state utility, reached an energy-efficiency agreement in 1993 with the manufacturers of straighttube fluorescent lamps. Under the deal, production is

being converted from T-12. ings. "It is an area where 40-watt and 20-watt lamps to T-S, 36-watt and 18-watt lamps, which provide the same amount of light but use 10 per cent less energy, The DSM office has also designed programmes for refrigerators, air conditioners and compact fluorescent

Mr Terry Kraft-Oliver, the HEC's Bangkok managing director, poluts out that air conditioning saps up to 60 per cent of all electricity consumed in office build-

great efficiencles can be Mr Kraft-Oliver's words are not to be taken lightly. A five-year programme designed for EGAT foresees a sayings target of up to 284MW, the equivalent of a medlum-size power station. or savings of \$300m or more. The Thal government's legislation has teeth, It has an Energy Conservation Promotion Act, which focuses

on husinesses and buildings

with more than 1.000 kilo-

annual fuel use of 35m BTUs. "These facilities must designate an energy conservation manager, undertake a preliminary audit, and write and submit an energy conservation plan to the Department of Energy within two years," says Mr Piyasvasti Amranand, secretary gen eral, national energy policy office of Thailand, Last year, about 2,500 factories and 900 large buildings fell into this group of "controlled" facili-

The Enemy Conservation Promotion Fund has been set up to help facilities plan for and carry out energy-efficlency upgrades. The funddraws its resources from a tax on petroleum and natural gas products. It held \$400m at the end of 1995.

In recent years, the IIEC, a Washington-based non-profit organisation, has turned its attention to the Philippines which has south-east Asia's fastest-privatising power sec-tor. The Department of Energy recently mandated that all utilities create DSM

Energy is a sore point in the Philippines, where 12hour brown-outs were the norm in the early 1990s due to energy waste and inadequate supply. The HEC says that the Energy Regulatory Board needs to establish a framework that will allow utilities to recover the costs of their DSM programmes.

Two studies on DSM potential In the Philippines foresee huge scope. In the new 1994-2010 period, the American consultants SRC International and IIEC-Asia estimate savings of 900MW. or 3,660 gigawatt hours per year - a net benefit of \$550m. Analysing 1995-2003, the consultants RCG Hagler Balliy predict savings of 391MW and a not benefit of

MELTINEN.

THE CHARLE

\$128m. It is the IIEC's belief that the office, factory and household ends of the electricity cycle offer as much opportunity for savings as the pro-duction, transmission and distribution end.

world leaders

will endorse

measures to

world food

summit in

#### MONDAY

#### CBI conference opens

The Confederation of British Industry annual conference opens in Harrogate. with husinessmen's attitude to European economic and monetary union high on the agenda. A survey of members' opinions will show how far the CBI is split on the single currency. Speakers include Michael Heseltine, the deputy prime minister, and Gordon Brown, the shadow chancellor.

#### WTO to open up telecoms

meet in Geneva to push forward World Trade Organisation talks on liberalising basic telecom systems. The

have ended last April but the deadline was postponed to February 1997 because Washington was not satisfied. More countries have since announced plans to open their telecom markets.

#### **EU** on single currency

EU finance ministers meet in Brussels to discuss preparations for the planned single currency. Germany wants tough penalties for those countries in the future Euro zone that run up excessive hudget deficits. Others, however, are resisting an overly rigid approach. Tax harmonisation in the single market is also on the agenda.

#### **German budget meeting**

The parties of the ruling coalition of Helmut Kohl, the German chancellor, meet in Bonn to agree on how to share DM3hn (£2.8hn) of spending cuts so that next year's federal deficit does not exceed the already-planned DM56.5hn. The austerity drive is part of Germany's efforts to meet the Maastricht criteria next year and so qualify for Emu in 1999. The Bundestas hudget committee will finalise its 1997 draft federal hudget on Thursday.

#### Public holidays

Belgium, Bermuda, Bhutan, Canada, Cayman Islands, Colombia, France, French Guiana, French W Indies. Guam, Guyana, India, Maldives, Netherland Antilles, Poland, Puerto Rico, Singapore, Tahiti, US (most states), Virgin Islands. Armistice Day.

#### **FT Surveys**

Hampshire and its Cities; Energy Efficiency.

### TUESDAY

**Euro MPs discuss fraud** 

Euro MPs meeting for their monthly plenary sessioo in Strasbourg will be presented with the annual report of the A three-day Middle East/North Africa Court of Auditors, the EU's spending

Selman Rushdie will pick up his literature award in Copenhagen after all on Wednesday now that the Danes have agreed to guarantee his safety

watchdog, on management of EU funds and fraud in the union. It is expected to call for extensive reforms of the union's multi-hillion dollar social fund.

#### China on rat-killing spree

celebrates a rat-killing day in Beijing. The Chinese calendar's year of the rat has proved profitable for rat-catchers:

earlier this year the city of Shenyang eliminated 400,000 rats, with each carcass worth 80. The campaign comes tha day before Margaret Thatcher, the former British prime minister, makes a two-day visit for an International conference on Chinese trade and investment opportunities.

#### Court considers UK hours The European Court of Justice delivers its judgment on whether the UK must implement the EU directive limiting

the maximum working week to 48 hours. The British government claimed the directive should be covered by its opt-out to the Maastricht social chapter. But a preliminary ruling in March found against the government. and it is rare for the full court to reach different conclusion. If the ruling is not overturned, the UK has threatened to block any EU reforms proposed at the intergovernmental conference.

**Business forum in Egypt** 

economic conference, hosted by the

government of Egypt with the World Economic Forum, will enable the international husiness community to meet state officials and private-sector workers. More than 3,000 people from 90 countries are expected at the conference, the third of its kind aimed at integrating the region's economy.

### Report on Swiss accounts

Hanspeter Hänt, the Swiss hanking omhudsman, releases his first report on his search for dormant bank accounts of victims of the Nazi holocaust. Mr Hāni, who is in charge of processing all claims made by holocaust victims and their heirs, is expected to reply to accusations that after 2,000 inquiries and 1,000 formal claims he has rejected every claimant for the past year.

#### Saleroom

New York sees its hig winter sales of impressionist and modern art at Sothehy's and Christie's, Sothehy'a is offering works hy

Degas, Manet, Monet, Gauguin and Matisse, while Christie's on Wednesday has two paintings by Monet which could each reach \$10m (£6.1m), plus a \$6m Van Gogh garden scene. Also on Wednesday at Sotheby's George Ortiz is selling an 18th century silver tureen which could fetch \$8m.

#### FT Surveys Atlanta - the Olympic Legacy; Qnebec.

Statistics to be released this week

#### Public holidays Bhutan, India, Maldives, Talwan,

#### FRIDAY 15

**Elections to Czech senate** Two days of voting begin for the Czech Republic's new upper house of perliament, the senate. Polls suggest the chamber will be fairly evenly divided between the two largest parties - the centre-right Civic Democrats of Vaclav Klaus, the prime minister, and the centre-left Social Democrats led by Miles Zeman the chairman of parliament. Although the senate will have little real power, the election could have a bearing on how long Mr Klaus's government remains in office. Mr Klaus lost his parliamentary

#### Local elections in Brazil

majority in June.

Municipal elections in Brazil take place which will have important implications for President Fernando Henrique Cardoso's efforts to alter the constitution to allow him to run for re-election. In Sao Paulo, a strong victory by Celso Pitta, the candidate of the leader of the conservative PPB party, Paulo Maluf, would bolster Mr Maluf's presidential ambitions and could lead him to oppose the constitutional change.

#### Japan mid-results peak

Japan's interim corporate results reporting season comes to a peak. when 200 companies are to publish their financial performance for the six months to September 30. Most manufacturers have reported only small profits gains on their domestic operations because of the dull state of the Japanese economy. However, they have made a killing on export markets, because of the fall in the value of the Japanese yen.

#### lllescu in run-off ballot

lon Iliescu, the former communist who has led Romania since 1989, faces a tightly contested run-off for the presidency. Mr Iliescu, who is seeking a third term, emerged at the head of 16 candidates in the first round of voting. However, he was only four points ahead of Emil Constantinescu, of the centre-right Democratic Convention.

#### Primakov visits China

Yevgeny Primakov, the foreign minister of the Russian Federation. arrives in China for a two-day visit. A foreign ministry spokesman said the two sides would "exchange views on bilateral relations and international issues of common concern".

#### Thailand chooses MPs

Thailand holds national elections to choose 393 members of parliament. They will select a prime minister to replace the outgoing Banharn Silpa-archa, whose government lasted 14 months. The front-runners for the premiership are General Chavalit Yongchaiyudh, the leader of the New Aspiration party and former commander-in-chief of Thailand's armed forces, and Chuan Leekpai, the leader of the Democrat party and prime minister between 1992 and 1995, Each of the two parties are expected to win 125 seats at most, with the rest coming from more than 10 smaller parties.

#### MORSE

#### It's a Computer. (But not as we know it).

This is a JavaStation. It's a thin client - the kind of machine that visionary companies like Sun Microsystems believe represents the future of corporate desktop computing.

It has no disk. It has no conventional operating system. It's designed to run pure Java, using applications residing on your server. The benefits include higher reliability, better security - and a significant decrease in cost of ownership over traditional PCs.

Call for our JavaStation one-page summary, and Network Computing and Java executive briefing.
